Chromium, Silver, Composite materials, Eddy-current tests, Non-destructive testing, Metals Modern Prestressed Concrete Design Pearson Educación Groundbreaking mystery writer Anna Katherine Green is regarded as one of the most important early innovators in the genre and one of the most procedurally and scientifically accurate of most early detective fiction authors. Although The Mystery of the Hasty Arrow is a

classic Green novel in its pulse-pounding plot and scientific detail, this mystery also adds a layer of psychological complexity that will thrill suspense fans. Serial Entrepreneur Cambridge University Press Analysis of economic theory of economic growth and economic development - covers social implications and cultural factors, economic structures, entrepreneurship, financing from domestic sources and

through economic aid, the role of trade and investments, and decision making in respect of economic policy. References. Cold and Ultracold Collisions in Quantum Microscopic and Mesoscopic Systems Pitman Publishing

Eleanor Smith's Hull House Songs CRC Press A considerable literature has been devoted to the study of Islamic activism. By contrast, Nadjé Al-Ali's book explores the anthropological and political significance of secular-oriented

activism by focusing on the women's movement in Egypt. In so doing, it challenges stereotypical images of Arab women as passive victims and demonstrates how they fight for their rights and confront conservative forces. Al-Ali's book also takes issue with prevailing constructions of 'the West' and its perceived dichotomous relation to 'the East'. The argument is constructed around interviews which afford fascinating insights into the history of the

women's movement in Egypt, notions about secularism and how Islamist constituencies have impacted on women's activism generally. The balance between the empirical and conceptual material is adeptly handled. The author frames her work in the context of current theoretical debates in Middle Eastern and post-colonial scholarship: while some of the ideas are complex, her lucid style means they are always comprehensible; the book will therefore appeal to students, as well as to scholars in the field.

Electric Field Analysis is both a student-friendly textbook and a valuable tool

for engineers and physicists engaged in the design work of high-voltage insulation systems. The text begins by introducing the physical and mathematical fundamentals of electric fields, presenting problems from power and dielectric engineering to show how the theories are put into practice. The book then describes various techniques for electric field analysis and

their significance in the validation of numerically computed results, as well as: Discusses finite difference, finite element, charge simulation, and surface charge simulation methods for the numerical computation of electric fields Provides case studies for electric field distribution in a cable termination, around a post insulator, in a condenser bushing, and

around a gas-insulated substation (GIS) spacer Explores numerical field calculation for electric field optimization, demonstrating contour correction and examining the application of artificial neural networks Explains how high-voltage field optimization studies are carried out to meet the desired engineering needs Electric Field Analysis is accompanied

by an easy-to-use yet comprehensive software for electric field computation. The software, along with a wealth of supporting content, is available for download with qualifying course adoption. Notes Cold and ultracold collisions occupy a strategic position at the intersection of several powerful themes of current

---

research in chemical physics, in atomic, molecular and optical physics, and even in condensed matter. The nature of these collisions has important consequences for optical manipulation of inelastic and reactive processes, precision measurement of molecular and atomic properties, matter-wave coherences and quantum-statistical condensates of

dilute, weakly interacting atoms. This crucial position explains the wide interest and explosive growth of the field since its inception in 1987. The author reviews elements of the quantum theory of scattering theory, collisions taking place in the presence of one or more light fields, and collisions in the dark, below the photon recoil limit imposed by the presence of any light field.

Finally, it reviews the essential properties of these mesoscopic quantum systems and describes the key importance of the scattering length to condensate stability.
