The purpose of this  
Dictionary, published jointly

by «Kluwer Technische Boeken, BV» (Deventer, Netherlands) and «Russky yazyk Publishers» (Moscow, USSR) is to help the user read and translate English, German, French, Dutch and Russian texts in electrical engineering. Up until now all such dictionaries were containing terms pertaining directly to electrical engineering plus the terminology used in its off-sheets which have evolved into separate disciplines, such as communications, electronics, automation etc. Foremost, however, this

Dictionary represents the terminology of electrical engineering, while the branches are represented by their basic terms only. Given the relative small volume (about 8000 terms), the authors tried to reflect the most important terms in such areas as the circuit theory, electric and magnetic measurements, electric power generation, transmission and distribution, as well as the industrial and domestic consumption of electric power. The Dictionary also contains many terms

relevant to high voltage technology, electrical machines and apparatus, electric drive, as well as to the elements and structures of aerial and cable transmission lines. In selecting English terms, the authors were trying to reflect both their British and American versions, although they did not attempt to present all terminological synonyms of this kind. In some cases the Dictionary provides the main spelling versions.

### Evaluation Models PIMS

This concise book for engineering and sciences students emphasizes modern statistical methodology and data analysis. APPLIED STATISTICS FOR ENGINEERS AND SCIENTISTS is ideal for one-term courses that cover probability only to the extent that it is needed for inference. The authors emphasize application of methods to real problems, with real examples throughout. The text is designed to meet ABET standards and has been updated to reflect the most

current methodology and practice. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

John Wiley & Sons  
Attempting formally to evaluate something involves the evaluator coming to grips with a number of abstract concepts such as value, merit, worth, growth, criteria, standards, objectives, needs, norms, client, audience, validity, reliability, objectivity, practical significance, accountability, improvement, process, product, formative, summative, costs,

impact, information, credibility, and - of course - with the term evaluation itself. To communicate with colleagues and clients, evaluators need to clarify what they mean when they use such terms to denote important concepts central to their work. Moreover, evaluators need to integrate these concepts and their meanings into a coherent framework that guides all aspects

of their work. If evaluation is to lay claim to the mantle of a profession, then these conceptualizations of evaluation must lead to the conduct of defensible evaluations. The conceptualization of evaluation can never be a one-time activity nor can any conceptualization be static. Conceptualizations that guide evaluation work must keep pace with the growth of theory and

---

practice in the field. Further, the design and conduct of any particular study involves a good deal of localized conceptualization.

Structured on practical criteria, The Handbook of Thermoprocessing Technologies provides a detailed overview of the

entire thermoprocessing sector and is of particular use to students of all relevant disciplines, to manufacturers, users and to engineers in this field. The first volume examines the basic principles, procedures and processes involved in thermoprocessing technology. In Europe thermoprocessing is the third largest energy consumption sector with a very diversified and complex structure. Accordingly we find the application know-how for

---

the design and the execution of respective equipment represented by a multitude of small but very specialized companies and their experts. The second edition is based on the contribution of many highly experienced engineers working in this field. The book's main intention is the presentation of practical thermal processing for the improvement of materials and parts in industrial application. Additionally it offers a

summary of respective thermal and material science fundamentals. Further it covers the basic fuel-related and electrical engineering knowledge and design aspects, components and safety requirements for the necessary heating installations. pronunciation and skills to give students the right mix of language and motivation to get them talking. With lively lessons and engaging topics, classes are enjoyable and provide opportunity for students to practise and improve. Support for teachers includes a Teacher's Book with over 100 photocopiables along with extra tips and ideas. The Classroom Presentation Tool brings your classroom

to life with the Student's Book and Workbook on-screen and interactive. Public Works Manual Springer Science & Business Media Teaching fundamental design concepts and the challenges of emerging technology, this textbook prepares students for a career designing the computer systems of the future. In-depth coverage of complexity, power, reliability and performance, coupled with treatment of parallelism at all levels, including ILP and TLP, provides the state-of-the-

art training that students need. The whole gamut of parallel architecture design options is explained, from core microarchitecture to chip multiprocessors to large-scale multiprocessor systems. All the chapters are self-contained, yet concise enough that the material can be taught in a single semester, making it perfect for use in senior undergraduate and graduate computer architecture courses. The book is also teeming with practical examples to aid the learning process, showing concrete applications of definitions. With simple models and

The National

Postsecondary Student Aid Study (NPSAS) is a comprehensive nationwide study conducted by the National Center for Education Statistics to determine how students and their families pay for postsecondary education and to describe some

demographic and other characteristics of those enrolled. The study is based on a nationally representative sample of students in postsecondary education, including undergraduate, graduate, and first-professional students at public and private institutions, whether less-than-two-year, two-year, or four-year. Data were available on about 82,000 students, and parents of 18,000 students were selected for a telephone interview. This discussion of survey methodology focuses on: (1) study objectives and

design; (2) institution sampling and enlistment; (3) student and parent sampling; (4) institutional records data collection; (5) student and parent surveys; (6) file creation and data analysis; (7) weights and variance estimation; (8) the 1993 NPSAS field test; and (9) a summary and recommendations for survey improvement. Six appendixes provide further details about methodology, including a formulation of the generalized rating model. (Contains 17 figures and 56 tables.) (SLD)
