From the early days when RNA interference was a strange artifact in worms to the 2006 Noble Prize received by Fire and Mello and the current clinical trials, the field of RNA interference has grown at a breakneck pace. In *RNA Interference: From Biology to Clinical Applications*, expert contributors provide an overview of the most current science and protocols that span the biological disciplines from detailed nucleic acid chemistry, to pharmacology, to the manipulation of signal transduction pathways. Divided into three distinct sections, this volume delves into the physiology of RNA interference, RNA interference in the laboratory and siRNA delivery, and preclinical and clinical issues

associated with the use of RNAi-inducing agents as drugs in order to stimulate new questions and offer the tools necessary to start addressing those questions. Written in the highly successful *Methods in Molecular Biology*™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and inspiring, *RNA Interference: From Biology to Clinical Applications* aims to promote and motivate innovation by reviewing what has been done, providing details of how it has been done, and encouraging speculation on what the future may hold.

In Targets for Cancer Chemotherapy: Transcription Factors and Other Nuclear Proteins, a panel of leading basic researchers, pharmaceutical scientists, and clinical oncologists explain in detail the therapeutically-relevant protein targets that contribute to cancer pathology and spell out their implications for cancer drug discovery and clinical application. The authors identify and illuminate selected transcription factor oncoproteins and tumor suppressors, together with nuclear proteins that are central to the phenotype of the tumor cell involved in chromatin control. The emphasis is on new targets and approaches to cancer treatment derived from the cancer cell cycle, gene control targets, and angiogenesis.

The alternate timelines of Charles Stross' Empire Games trilogy have never been so entangled than in Invisible Sun—the techno-thriller follow up to Dark State—as stakes

escalate in a conflict that could spell extermination for humanity across all known timelines. An inter-timeline coup d'état gone awry. A renegade British monarch on the run through the streets of Berlin. And robotic alien invaders from a distant timeline flood through a wormhole, wreaking havoc in the USA. Can disgraced worldwalker Rita and her intertemporal extraordinaire agent of a mother neutralize the livewire contention before it's too late? of philosophers in ancient times - the prime influence on the Stoics - but it is hard to understand why. Their name comes from the Greek word for "dog," and they behaved something like stray dogs, living on the street, acting shamelessly, attacking their enemies fiercely. This book contains the longest surviving fragments of writing by a Cynic philosopher. The introduction shows that the fragments are enough for us to reconstruct the entire book was like. It also explains the Cynics' influence on the Stoics. Both wanted to be independent of good or bad fortune, so both believed that only virtue was important. Both believed that virtue consisted in living according to nature, but they had different ideas of what this meant. The Cynics believed that we must reject the comforts and conventions of civilization to live in accordance with nature- even defending incest and cannibalism. The Stoics made themselves much more respectable by substituting ideas of living according to nature that they borrowed from Aristotle and Plato.

Dictyostelia are soil amoebae capable of extraordinary feats of survival, motility, chemotaxis, and development. Characterised by their ability to transform from a single-celled organism into an elaborate assemblage of thousands of synchronously-moving cells, Dictyostelids are often referred to as 'social amoebae', and

---

have been the subjects of serious study since the 1930s. Research in this area has been instrumental in understanding many problems in cellular biology. Beginning with the history of Dictyostelids and discussing each stage of their development, this book considers the evolution of this unique organism, analyses the special properties of the Dictyostelid genome, and presents in detail the methods available, at the time of the book's original publication in 2001, to manipulate their genes. Representing the synthesis of such material and with an emphasis on combining classical experiments with modern molecular findings, this book will be essential for researchers and graduates in developmental and cellular biology.

The primary objective of this book is to provide students and laboratory instructors at universities and professional ecologists with a broad range of established methods to study plant litter decomposition. Detailed protocols for direct use in the field or laboratory are presented in an easy to follow step-by-step format. A short introduction to each protocol reviews the ecological significance and principles of the technique and points to key references.

Signal processing is a broad and timeless area. The term "signal" includes audio, video, speech, image, communication, geophysical, sonar, radar, medical, and more. Signal processing applies to the theory and application of filtering, coding,

---

transmitting, estimating, detecting, analyzing, recognizing, synthesizing, recording, and reproducing signals. Handbook of Formulas and Tables for Signal Processing a must-have reference for all engineering professionals involved in signal and image processing. Collecting the most useful formulas and tables - such as integral tables, formulas of algebra, formulas of trigonometry - the text includes: Material for the deterministic and statistical signal processing areas Examples explaining the use of the given formula Numerous definitions Many figures that have been added to special chapters Handbook of Formulas and Tables for Signal Processing brings together - in one textbook - all the equations necessary for signal and image

processing for professionals transforming anything from a physical to a manipulated form, creating a new standard for any person starting a future in the broad, extensive area of research.

Using the new, rapidly developing technique of contrast-enhanced angiography (CEA), also known as magnetic resonance angiography (MRA), cardiologists can

now quickly and effectively evaluate a broad range of vascular abnormalities, including the kinds of problems often seen with traditional echocardiography. An Atlas of Contrast-Enhanced Angiography uses images taken directly from the magnetic resonance scanner to illustrate the application of CEA to all the common pathologies and anomalies seen in the cardiovascular system. It contains tables, charts, and line diagrams that delineate the angiograms. Authors Mohiaddin and Bunce supply explanatory text supporting and complementing the figures and providing clinical diagnoses and investigations of a multitude of normal and abnormal findings. A clinical aid to diagnosis and a review text containing bibliographic references and index, An Atlas of Contrast-Enhanced Angiography allows you to learn from the current leaders in the field. In addition, it provides you with a visual aide to the diagnosis and management of vascular disease.

This book, Tropical Animal Health, describes the problems of animal diseases in the tropics, in the tropical environment, and in relation to particular production systems. In Part I, those basic scientific facts of the special host defence mechanism and of the host-pathogen relationship in the tropics, which hardly play any part in animal husbandry in temperate climates, are explained. Of special importance are the resistance mechanisms of autochthonous breeds and in contrast to them, the high susceptibility of exotic breeds in the

---

tropics. It is explained how immuno- and chemoprophylaxis can be used as instruments for animal health measures if they are adapted to the socio-economic and ecological conditions of both the tropics and developing countries. Scientific details of immunology are presented as far as they are necessary to understand the epizootiology of tropical diseases and diagnostic techniques for recognizing tropical diseases as well as the execution of prophylactic measures. Vector-borne diseases are the disease complexes most difficult to control since they are bound to the tropical environment, thanks to the biology of their vectors. Therefore, a special chapter has been dedicated to the description of biology and eradication of vectors of vector-borne diseases. The extent of the description varies according to the importance of the specific vector. The acaricides, insecticides and

alternative methods used to control vectors are discussed in detail. The author has tried to present a world-wide picture, but it is not possible to cover every aspect completely.

nanotechnology mean that the time has come to bring this standard-setting reference up to date. New in the Second Edition 19 completely new chapters addressing important topics in bioinstrumentation, control systems, nanotechnology, image and signal processing, electronics, environmental systems, structural systems 131 chapters fully revised and updated Expanded lists of engineering associations and societies The Engineering Handbook, Second Edition is designed to enlighten experts in areas outside their own specialties, to refresh the knowledge of mature practitioners, and to educate engineering novices. Whether you work in industry, government, or academia, this is simply the best, most useful engineering reference you can have in your personal, office, or institutional library.

Cast Iron Technology presents a critical review of the nature of cast irons. It discusses the types of cast iron and the general purpose of cast irons. It also presents the history of the iron founding industry. Some of the topics covered in the book are the description of liquid metal state; preparation of liquid metal; process of melting; description of cupola melting and electric melting methods; control of composition of liquid metal during preparation; description of primary cast iron solidification structures; and thermal analysis of metals to

---

determine its quality. Solidification science and the fundamentals of heat treatment are also discussed. An in-depth analysis of the hot quenching techniques is provided. The graphitization potential of liquid iron is well presented. A chapter is devoted to microstructural features of cast iron. The book can provide useful information to iron smiths, welders, students, and researchers.

Filling a critical gap in the current literature, this new resource presents practical, step-by-step methods to help you synthesize, characterize, biofunctionalize and apply the nanomaterial that is most suitable for handling a given nanoscale bioengineering problem. Written and presented by leading scientists and engineers in their respective fields, the authors offer a clear and detailed understanding of how to carry out nanoparticle functionalization with biomolecules (including enzymes), nanoparticle analysis and characterization, in vitro evaluation of nanoparticles using different cell lines and in vitro evaluation of nanoparticles as therapeutics and imaging agents.

Lectins have in the past been regarded by many scientists as curious proteins of uncertain structure and specificity that bind to carbohydrates of dubious significance themselves. All this is rapidly changing. The functional importance of glycosylation in cell-cell and cell-pathogen interactions, as well as intracellular events, has been recognized by the explosion of the science of glycobiology. This has been paralleled by the realization that lectins, once they have been well characterized, can be extremely useful tools for examining structural changes in glycosylation and their functional consequences for human pathophysiology. Different lectins vary considerably in their degree of specificity.

Some, such as wheatgerm agglutinin, have fairly broad specificity (for glucosamine or sialic acid), whereas others, such as Maackia amurensis, are specific not only for a single carbohydrate, but also for its linkage (2-3 linked sialic acid). Lectins with relatively broad specificity may be very useful as an adjunct to isolation or quantification of soluble glycoproteins, whereas lectins of known, and precise, specificity will be more useful for characterization of carbohydrate structure. We have included an appendix in Lectin Methods and Protocols that provides the known specificities of all lectins cited in the text.
