First published in 2003. The NATO-led Operation Allied Force was fought in 1999 to stop Serb atrocities against ethnic Albanians in Kosovo. This war, as noted by the distinguished military historian John Keegan, "marked a real turning point . . . and proved that a war can be won by airpower alone." Colonels Haave and Haun have organized firsthand accounts of some of the people who provided that airpower--the members of the 40th Expeditionary Operations Group. Their descriptions--a new wingman's first combat sortie, a support officer's view of a fighter squadron relocation during combat, and a Sandy's leadership in finding and rescuing a downed F-117 pilot--provide the reader with a legitimate insight into an air war at the tactical level and the airpower that helped convince the

Serbian president, Slobodan Milosevic, to capitulate.

The GM LS engine has revolutionized the muscle car and the high-performance V-8 market. It has become a favorite engine to swap into classic cars because it offers a superior combination of horsepower, torque, and responsiveness in a compact package. As such, these modern pushrod V-8 engines are installed in vintage GM muscle cars with relative ease, and that includes Chevelles and other popular GM A-Body cars. In fact, General Motors manufactured about 500,000 Chevelles and A-Body cars between 1968 and 1970 alone. Jefferson Bryant, author of LS Swaps: How To Swap GM LS Engines into Almost Anything, has performed many LS swaps throughout his career, and has transplanted the LS into several A-Body cars. In this comprehensive guide, he provides detailed step-by-step instructions for installing an LS powerplant into a Chevelle, Buick GS, Oldsmobile Cutlass, and Pontiac GTO. To successfully install an LS engine, you need to select or fabricate motor mounts and adapter plates to mount the engine to the chassis. Also, you need to integrate the electronic engine controls and wiring harness to the A-Body car. If you run a fuel-injection system, a new tank or high-pressure fuel pump, fuel lines, and related equipment must be installed. Bryant covers all of these crucial steps and much more. He explains essential procedures, time saving techniques, and solutions to common problems. In addition, he performs a new LT swap into an A-Body car. Swapping an LS engine into an A-Body is made much easier with a comprehensive guidebook such as this, whether you plan on doing it yourself or decide to have a shop do it for you. A huge and thriving aftermarket provides a wide range of suspension, brake, steering, chassis, and other parts that produce functional improvements. Before you tackle your LS Swap project, arm yourself with this vital information to guide you through the process. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial}

"The Corona crisis and the Need for a Great Reset" is a guide for anyone who wants to understand how COVID-19 disrupted our social and economic systems, and what changes will be needed to create a more inclusive, resilient and sustainable world going forward. Thierry Malleret, founder of the Monthly Barometer, and Klaus Schwab, founder and executive Chairman of the World Economic Forum, explore what the root causes of these crisis were, and why they lead to a need for a Great Reset. Theirs is a worrying, yet hopeful analysis. COVID-19 has created a great disruptive reset of our global social, economic, and political systems. But the power of human beings lies in being foresighted and having the ingenuity, at least to a certain extent, to take their destiny into their hands and to plan for a better future. This is the purpose of this book: to shake up and to show the deficiencies which were manifest in our global system, even before COVID broke out.

Developing countries need additional, cross-border capital channeled into their private sectors to generate employment and growth, reduce poverty, and meet the other Millennium Development Goals. Innovative financing mechanisms are necessary to make this happen.

'Innovative Financing for Development' is the first book on this subject that uses a market-based approach. It compiles pioneering methods of raising development finance including securitization of future flow receivables, diaspora bonds, and GDP-indexed bonds. It also highlights the role of shadow sovereign ratings in facilitating access to international capital markets. It argues that poor countries, especially those in Sub-Saharan Africa, can potentially raise tens of billions of dollars annually through these instruments. The chapters in the book focus on the structures of the various innovative financing mechanisms, their track records and potential for tapping international capital markets, the constraints limiting their use, and policy measures that governments and international institutions can implement to alleviate these constraints.

This is the story of an airpower-dominated campaign, one that was deeply flawed in its design yet impressive in its efficiency. This quick-look study is based upon visits to damaged sites, villages, towns, and cities; discussions with government and military officials; and experience of having evaluated airpower and its effects in Afghanistan, Iraq, and the former Yugoslavia (and previously in Lebanon). Months of follow-up research included exchanges with Israeli, Lebanese, Hezbollah, and US experts. The intent was to develop a timely airpower narrative to enhance professional military education and planning. About the author: William M.
