Literacy for All International Reading Assn Studies of teachers in the U.S. often document insufficient subject matter knowledge in mathematics. Yet, these studies give few examples of the knowledge teachers need to support teaching, particularly the kind of teaching demanded by recent reforms in mathematics education. Knowing and Teaching Elementary Mathematics describes the nature and development of the knowledge that elementary teachers need to become accomplished mathematics teachers, and suggests why such knowledge seems more common in China than in the United States, despite the fact that Chinese teachers have less formal education than their U.S.

counterparts. The anniversary edition of this bestselling volume includes the original studies that compare U.S and Chinese elementary school teachers' mathematical understanding and offers a powerful framework for grasping the mathematical content necessary to understand and develop the thinking of school children. Highlighting notable changes in the field and the author's work, this new edition includes an updated preface, introduction, and key journal articles that frame and contextualize this seminal work.

Before becoming licensed educators, student teachers often demonstrate a license to transform the lives of others. A recent cohort of teacher candidates created this student teaching alphabet highlighting their personal, philosophical, and ethical license to

transform. Original artifacts (i.e., poems, letters, artwork) serve as entry-points through which to consider how life events, aspirations, challenges, and beliefs contribute to one's emerging and evolving personal and professional identities. Readers are invited to contemplate their experiences, interactions, and lives in original and provocative ways. In educational psychology and teacher education/preparation courses, this book is meaningful for pre-service, early, mid-career, and veteran teachers as well as those considering a career in education. More than a curriculum of student teaching, it challenges us to imagine a curriculum of transformation that reflects the gestalt of all dimensions of life. More broadly, it can be useful for coursework in areas of the humanities, liberal arts, sociology, and curriculum studies. Individuals from a variety of backgrounds can reflect on their work and their lives through phenomenological lenses that validate the richness and complexities of their lived experiences. As a teacher's curriculum-as a curriculum of life-readers can ponder the ways they are being and becoming the educators-and the human beings-they've aspired to be. These teacher candidates are teaching for more than a license; they are teaching for better, more equitable futures. With the strength of their

commitment and the audacity of their passion for change, these student teachers have much to teach us. complexities of their lived experiences.
