despair, and hope. With refreshing candor, he delves into the motivation behind his message, beginning with the unvarnished tale of his own plunge from the pinnacle of a works-based, fake-smile existence that sapped his strength and led him down a path of destructive behavior. Along the way, Bethke gives you the tools you need to: Humbly and prayerfully open your mind Understand Jesus for all that he is View the church from a brand-new perspective Bethke is quick to acknowledge that he's not a pastor or theologian, but simply an ordinary, twenty-something who cried out for a life greater than the one for which he had settled. On this journey, Bethke discovered the real Jesus, who beckoned him with love beyond the props of false religion. Praise for Jesus > Religion: "Jeff's book will make you stop and listen to a voice in your heart that may have been drowned out by the noise of religion. Listen to that voice, then follow it--right to the feet of Jesus." --Bob Goff, author of New York Times bestsellers *Love Does* and *Everybody, Always* "The book you hold in your hands is Donald Miller's *Blue Like Jazz* meets C. There are certain catchwords that are more fascinating than the rest. Gamification is one such catchword. This is not shocking as the roots are traced back to the world of games. It is quite amusing that the term is vague for both beginners and intellects. While beginners misinterpret gamification as playing games, intellects brush it off as yet another deviation of a loyalty or

rewards program. But what is it, actually? Those in the community of gaming theory and practice have categorized gamification as a term. It is usually considered that it means employing gaming principles to non-gaming situations. It is a design process that reframes goals to be more attractive and attainable using the principles of game design. The gamified solutions targets our usual instincts to seek competition and accomplishment using conventional gamification methods such as point gathering, virtual currencies, accomplishment budgets or levels with growing difficulty are used within game community. This book does not suggest recipes for gamification since the best practices are still evolving. Instead, it provides a list of compelling gamification success stories implemented in organizations from various industries. Enterprise gamification is still in its beginning stage. There is much more to pursue and learn. The overall objectives of this book are (1) to present the

current state of games and use devices part of the Internet of gamification in various sectors and (2) to explore future opportunities and limitations of using gamification.

CompTIA A+ Complete Review Guide

If you read technology news, you'll notice it's not just a story of amazing new product introductions, or even that plus copycat product introductions. All

the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I've collected what happened in the industry in 2013 and make predictions on what will and won't happen in 2014. You can read what did happen in the mobile technology in 2013. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business, who's up, who's down. Is that changing? Is that likely to

change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones and choose the few to share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2014 for the mobile

technology industry, breakdowns of marketshare figures on the horse race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2013 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is figuring into our lives. I've divided the news into the subjects it covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about one topic at a time in the earlier chapters.
