Peter Cappelli confronts the myth of the skills gap and provides an actionable path forward to put people back to work. Even in a time of perilously high unemployment, companies contend that they cannot find the employees they need. Pointing to a skills gap, employers argue applicants are simply not qualified; schools aren't preparing students for jobs; the government isn't letting in enough high-skill immigrants; and even when the match is right, prospective employees won't accept jobs at the wages offered. In this powerful and fast-reading book, Peter Cappelli, Wharton management professor and director of Wharton's Center for Human Resources, debunks the arguments and exposes the real reasons good people can't get hired. Drawing on jobs data, anecdotes from all sides of the employer-employee divide, and interviews with jobs professionals, he explores the paradoxical forces bearing down on the American workplace and lays out solutions that can help us break through what has become a crippling employer-employee stand-off. Among the questions he confronts: Is there really a skills gap? To what extent is the hiring process being held hostage by automated software that can crunch thousands of applications an hour? What kind of training could best bridge the gap between employer expectations and applicant realities, and who should foot the bill for it? Are schools really at fault? Named one of HR Magazine's Top 20 Most Influential Thinkers of 2011, Cappelli not only changes the way we think about hiring but points the way forward to rev America's job engine again.

!969 Amendments to Appalachian Regional Development Act and Title V Regions Under the Public Works and Economic Development Act, Hearings ... 91-1, on H.R. 4018 and Related Bills iUniverse

This book reports on cutting-edge research and developments in manufacturing, giving a special emphasis to solutions fostering automation, sustainability and health, safety and well-being at work. Topics cover manufacturing process analysis and optimization, supply chain management, quality control, as well as human factors and logistics. They highlight the role and advantages of intelligent systems and technologies, discussing current best-practices and challenges to cope with in the near future. Based on proceedings of the 32nd edition of the International Conference on Flexible Automation and Intelligent Manufacturing, FAIM 2023, held on June 18 – 22, 2023, in Porto, Portugal, this second volume of a 2-volume set

provides academics and professionals with extensive information on innovative strategies for industrial management in the era of industry 5.0.

Computerworld Bloomsbury Publishing USA

South Asia has created nearly 800,000 jobs per month during the last decade. Robust economic growth in large parts of the region has created better jobs -- those that pay higher wages for wage workers and reduce poverty for the self-employed, the largest segment of the region s employed. Going forward, South Asia faces the enormous challenge of absorbing 1 to 1.2 million entrants to the labor force every month for the next two decades at rising levels of productivity. This calls for an agenda that cuts across sectors and includes improving the reliability of electricity supply for firms in both urban and rural settings, dealing decisively with issues of governance and corruption, making access to land easier for urban informal firms and strengthening transport links between rural firms and their markets. It requires improving nutrition in early childhood to avoid cognitive impairment, intensifying the focus on quality of learning in education systems, equipping workers with the skills that employers demand, and reorienting labor market regulations and programs to protect workers rather than jobs. The continuance of high economic growth to help improve job quality is not assured. But the region s demography can provide a favorable tailwind. The growth of workers exceeds that of dependents in much of the region. The resources saved from having fewer dependents can be shifted to high-priority investments in physical and human capital accumulation necessary to create productive jobs in countries with an enabling policy framework. But the demographic window of opportunity is open for only the next three decades, a fact which lends urgency to the reform agenda. This book will be of interest to policy makers, their advisers, researchers and students of economics who seek solutions, not only to the challenge of creating more and better jobs in South Asia but globally as well. It is the first title in South Asia Development Matters,a new series that will serve as a vehicle for in-depth synthesis of economic and policy analysis on key development topics for South Asia.

How to Use the Internet to Get Your Next Job

A practical how-to guide for students and a powerful reminder of the value of a

humanities education In recent decades, the humanities have struggled to justify themselves in the American university. The costs of attending a four-year college have exploded, resulting in intense pressure on students to major in STEM (science, technology, engineering, and mathematics), business, and other pre-professional or "practical" majors that supposedly transmit more marketable skills than can be acquired from the humanities. But, as Laurie Grobman and E. Michele Ramsey argue, this vision of humanities majors idly pondering the meaning of life for four years is inaccurate. Major Decisions demonstrates how choosing a major in the humanities is a worthwhile investment in a global economy that is shifting in the direction of college graduates who think broadly, critically, and ethically. Indeed, the core skills and knowledge imparted by an education in the humanities—including facility with written and verbal communication, collaboration, problem-solving, technological literacy, ethics, leadership, and an understanding of the human impacts of globalization—are immensely useful to employers across a variety of sectors. Major Decisions serves as a deeply informative guide to students and parents—and provides a powerful reminder to employers and university administrators of the true value of an education in the humanities.

Regional Economic Development Legislation of 1969, Hearings Before the Subcommittee on Economic Development ... Serial No. 91-5

With a looming unemployment rate hovering around 10 percent, finding a new job may be more than you can stomach. But even in this clouded economy, employers are hitting the virtual pavement to find top-tier talent — some employers estimate 75 percent of their staff came through online applications. The search does not have to be daunting: How to Use the Internet to Get Your Next Job shows you how to weave through the Web in your next job search. In this book, you will learn how to conduct an effective job search by determining keywords and phrases, creating an online résumé, and also how to research potential employers. But it does not stop there: This book compiles and analyzes the major job sites — Monster.com, Yahoo! Hot Jobs, and CareerBuilder.com — as well as niche sites for every industry, from health care and administrative to accounting and public relations. This book also lists résumé banks and online newspapers to round out your Internet search.

How to Use the Internet to Get Your Next Job shows how to harness the powerful search capabilities of the Internet to find (and land) your dream job, no matter what industry and no matter what level. The strategies will help you conduct a time saving, low-cost, and high-impact job search. Whether you are searching for your first job out of college or looking to change careers, How to Use the Internet to Get Your Next Job gives you the most comprehensive Internet search to help you find your best-suited job. Atlantic Publishing is a small, independent publishing company based in Ocala, Florida. Atlantic Publishing prides itself on producing award winning, high-quality manuals that give readers up-to-date, pertinent information, real-world examples, and case studies with expert advice. Every book has resources, contact information, and web sites of the products or companies discussed.

Flexible Automation and Intelligent Manufacturing: Establishing Bridges for More Sustainable Manufacturing Systems

A pervasive disconnect exists between the job/career culture and the present economic reality in America. This book offers powerful strategies for stemming the employment crisis and proposes comprehensive solutions for businesses, government, and job seekers alike. America's low unemployment rate overshadows the fact that more than 20 million Americans are still unemployed. Moreover, more than eight million jobs are vacant because employers cannot find qualified candidates. It is projected that if this imbalance between available positions and skills is not quickly addressed, more than 14 million jobs will be vacant by 2020, and that many more people out of work. In Future Jobs, historical economist Edward E. Gordon explains how increasingly complex technologies, global demographic shifts, and outdated education-to-employment systems are converging and may imminently cause a labor-market crisis. How can we ensure that enough people possess the skills necessary to holding the jobs of today and tomorrow? This book points to a solution gaining traction across the United States: Regional Talent Innovation Networks (RETAINs), alliances of businesses, educators, government agencies, and nonprofit organizations that successfully bridge the talent gap. Additionally, it provides information on the most promising jobs and careers of the next decade for early-career job seekers and for workers who are looking to change career paths.
