A car PC or carputer is a car tricked-out with electronics for playing radio, music and

DVD movies, connecting to the Internet, navigating and tracking with satellite, taking photos, and any electronic gadget a person wants in a car. All these devices are managed and controlled through a single screen or interface. The only place car PC enthusiasts can go for advice, tips and tools is a handful of hard-to-find Web sites--until now. Car PC Hacks is your guide into the car PC revolution. Packing MP3 players, handheld devices, computers and video-on-demand systems gives you a pile too heavy to carry. But add a car and put them together, you've got a powerful and mobile multimedia center requiring no lifting. The next time you give kids a lift, you won't hear, "Are we there yet?" Instead, expect "We're there already?" as they won't want to leave the car while playing video games from multiple consoles. Car PC Hacks is the first book available to introduce and entrench you into this hot new market. You can count on the book because it hails from O'Reilly, a trusted resource for technical books. Expect innovation, useful tools, and fun experiments that you've come to expect from O'Reilly's Hacks Series. Maybe you've hacked computers and gadgets, and now you're ready to take it to your car. If hacking is new and you would like to mix cars and computers, this book gets you started with its introduction to the basics of car electrical systems. Even when you're unclear on the difference between amps and watts, expect a clear

explanation along with real-life examples to get on track. Whether you're venturing into car PC for the first time or an experienced hobbyist, hop in the book for a joy ride.

RUN WITH POWER is the groundbreaking guide you need to tap the true potential of your running power meter. From 5K to ultramarathon, a power meter can make you faster—but only if you know how to use it. Just viewing

your numbers is not enough; you can only become a faster, stronger, more efficient runner when you know what your key numbers mean for your workouts, races, and your season-long training. In *Run with Power, Training*, Bible coach Jim Vance offers the comprehensive guide you need to find the speed you want. *Run with Power* demystifies the data and vocabulary so you can find and understand your most important numbers. You'll set your Running Power

Zones so you can begin training using 8 power-based training plans for 5K, 10K, half-marathon, and marathon. Vance shows you how you can compare wattage, heart rate, pace, and perceived exertion to gain the maximum insight into your performances, how you respond to training, and how you can train more effectively. *Run with Power* will revolutionize how you train and race. Armed with Vance's guidance, you can train more specifically for races, smooth your running

technique, accurately measure your fitness, predict a fitness plateau, monitor injuries, know exactly how hard you 're training, get more fitness from every workout, recover fully, perfect your tapers, warm up without wasting energy, pace your race on any terrain, know when to open the throttle, and create an unprecedented picture of yourself as an athlete. If you 're just glancing at the number on your wrist or computer monitor, you 've got a lot more speed

potential. Knowledge is power and understanding your power numbers can open the gate to new methods and new PRs. Run with Power introduces the use of power meters to the sport of running and will show you how to break through to all-new levels of performance. Key concepts explored in Run with Power: 3/9 Test, 30-minute Time Trial Test, Running Functional Threshold Power (rFTPw), Running Functional Threshold Pace (rFTPp), Averaged and

Normalized Power (NP), Intensity Factor (IF), Peak Power, Variability Index, Efficiency Index (EI), speed per watt, Vance 's Power Zones for Running, Training Stress Score (TSS), and Periodization with Power. Includes 6 testing methods and 8 power-based training schedules and workouts for 5K, 10K, half-marathon, and marathon.

The “engrossing, thoroughly researched look at women who are in romantic relationships with incarcerated men” —fully updated with twenty-first-century cases (Publishers Weekly). In 1991, Sheila Isenberg’s classic study *Women Who Love Men Who Kill* asked the provocative question, “Why do women fall in love with convicted murderers?” Now, Isenberg returns to the same question in the age of smart phones, social media, mass shootings, and modern prison dating. The result is a compelling psychological study of prison passion in

the new millennium. Isenberg conducts extensive interviews with women who seek relationships with convicted killers, as well as conversations with psychiatrists, social workers, and prison officials. She shows that many of these women know exactly what they are getting into—yet they are willing to sacrifice everything for the sake of a love without hope, promise, or consummation. This edition of *Women Who Love Men Who Kill* includes gripping new case studies and an absorbing look at

how the digital age is revolutionizing this phenomenon. Meet the young women writing “fan fiction” featuring America’s most sadistic murderers; the killer serving consecutive life sentences for strangling his wife and smothering his toddler daughters—and the women who visit him in prison; the high-powered journalist who fell in love and risked it all for “Pharma Bro” Martin Shkreli; and many other women absorbed in online and real-life dalliances with their killer men.

Globalization has created an interconnected world, but has not diminished violence and militarism. The *Economics of Killing* describes how the power of global elites, entrenched under globalization, has created a deadly cycle of violence. In this groundbreaking work, Vijay Mehta shows how attempts at peaceful national development are routinely blocked by Western powers. He centers the 2008 financial crisis in US

attempts to block China's model of development. He shows how Europe and the US conspire with regional dictators to prevent countries from developing advanced industries, and how this system has fed terrorism. Mehta argues that a different world is possible, based on policies of disarmament, demilitarization, and sustainable development. This original and thought-provoking book will be of great interest to

anyone concerned about the consequences of endless war fueled by the West.
