Using the Phone Book Causey Enterprises, LLC

A breakthrough program for triathletes -- beginner, intermediate, and advanced -- showing how to balance training intensity to maximize performance -- from a fitness expert and elite coach. Cutting-edge research has proven that triathletes and other endurance athletes experience their greatest performance when they do 80 percent of their training at low intensity and the remaining 20 percent at moderate to high intensity. But the vast majority of recreational triathletes are caught in the so-called "moderate-intensity rut," spending almost half of their time training too hard--harder than the pros. Training harder isn't smarter; it actually results in low-grade chronic fatigue that prevents recreational athletes from getting the best results. In *80/20 Triathlon*, Matt Fitzgerald and David Warden lay out the real-world and scientific evidence, offering concrete tips and strategies, along with complete training plans for every distance--Sprint, Olympic, Half-Ironman, and Ironman--to help athletes implement the 80/20 rule of intensity balance. Benefits include reduced fatigue and injury risk, improved fitness, increased motivation, and better race results.

Shortlisted for the 2015 Thwaites Wainwright prize for nature writing Richard Askwith wanted more. Not convinced running had to be all about pounding pavements, buying fancy kit and racking up extreme challenges, he looked for ways to liberate himself. His solution: running through muddy fields and up rocky fells, running with his dog at dawn, running because he's being (voluntarily) chased by a pack of bloodhounds, running to get hopelessly, enjoyably lost, running fast for the sheer thrill of it. Running as nature intended. Part diary of a year running through the Northamptonshire countryside, part exploration of why we love to run without limits, *Running Free* is an eloquent and inspiring account of running in a forgotten, rural way, observing wildlife and celebrating the joys of nature. An opponent of the commercialisation of running, Askwith offers a welcome alternative, with practical tips (learned the hard way) on how to both start and keep running naturally -- from thawing frozen toes to avoiding a stampede when crossing a field of cows. *Running Free* is about getting back to the basics of why we love to run.

A collaboration between leading scientists, practitioners, and researchers at Carnegie-Mellon University and the University of Pittsburgh, this book is a comprehensive resource describing Quality of Life technologies and their development, evaluation, adoption, and commercialization. It takes an interdisciplinary team approach to the process of technology development for disabled and older persons and discusses the state of the art and future directions of technologies. This work provides direction on how to identify user needs and preferences, engage end-users in the design and development process, and evaluate and commercialize the technologies.
