Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish. Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature and product innovation, has become the gold standard against which all other

outdoor-industry awards are measured.

This volume explores the complexity, diversity and interwoven nature of taxonomic pursuits within the context of explorations of humans and related species. It also pays tribute to Professor Colin Groves, whose work has had an enormous impact on this field. Recent research into that somewhat unique species we call humankind, through the theoretical and conceptual approaches afforded by the discipline of biological anthropology, is showcased. The focus is on the evolution of the human species, the behaviour of primates and other species, and how humans affect the distribution and abundance of other species through anthropogenic impact. Weaving together these three key themes, through the considerable influence of Colin Groves, provides glimpses of how changes in taxonomic theory and methodology, including our fluctuating understanding of speciation, have recrafted the way in which we view animal behaviour, human evolution and conservation studies.

The Inland Empire—the area east of Los Angeles and located primarily in San Bernardino and Riverside counties—is known as Southern

California 's big backyard. And with its mountain, foothill, valley, and desert recreational opportunities, it 's a hiker 's paradise. Afoot & Afield creating waypoints, and using your GPS with a Inland Empire describes nearly 200 noteworthy hikes ranging from easy to very strenuous in this first comprehensive hiking guide to the length and breadth of Inland Empire. These hikes explore Southern California 's three tallest mountains, the stark beauty of the high desert, including Joshua Tree National Park and Mojave National Preserve, as well as trails that wind through urban and regional parks. Each hike is shown on custom-created maps that also include GPS waypoints: the maps alone are worth the price of the book.

Monitoring Biodiversity Smithsonian Institution Describing the exciting and adventurous world surrounding geocaching--a worldwide hunt in which treasures are located using global positioning system (GPS) devices--this book offers an understanding and application of the principles and best practices of the game. What's different is that the authors wrap this knowledge in a tapestry of human stories that range from hilarious to touching. Paul and Dana Gillin interviewed 40 of the world's 50 most prolific geocachers as well as experts in container design, "extreme" geocaching Human/Animal Relationships in Transformation and other dimensions of the game. They tell how this global activity inspires passion that has helped people heal frayed marriages, establish new friendships--and even save lives.

Mobile Ad Hoc Networking John Wiley & Sons For outdoor adventurers who hike, fish, kayak, cross-country ski, or mountain bike in the backcountry, a GPS receiver can help them reach their destination and return safely -- but only if they know how to use it! Here is the guide to getting the most out of a GPS receiver, from basic consumer advice to advanced techniques. It even includes fun solo and team games that utilize GPS.

Starting with essential definitions and moving on to computer, this succinct book teaches the basics of navigation and outdoor GPS use. Advanced techniques are covered, such as creating custom maps, and new technologies are discussed, including using GPSenabled mobile phones, and how to use GPS with Google Earth and Google Maps. With years of experience as a GPS instructor, Hinch is well-versed in all aspects of navigation and GPS use, and he covers them in a jargon-free, easy-to-follow style. Five-Star Trails around Lake Tahoe Springer Science & Business Media FIELD & STREAM, America's largest outdoor

sports magazine, celebrates the outdoor experience with great stories, compelling photography, and sound advice while honoring the traditions hunters and fishermen have passed down for generations.

Backpacker University of Arizona Press The book compiles case studies regarding the biodiversity research and monitoring program of Andean species and habitats carefully chosen as indicators to assess the short- and long-term effects of a linear disturbance: the PERU LNG informing pipeline. Set in a scientifically unexplored region of the Andes, Monitoring Biodiversity clearly articulates the Smithsonian-led conceptual framework for the implementation in the field by scientists. It addresses scientific and conservation questions addressed by the research protocols, the experimental design, and data gathering. Moreover, the book covers a gap on how to integrate biodiversity research, industry monitoring, and conservation into sustainable development projects of national and international interest. From foraging patterns in a single tree to social interactions across a home range, how primates use space is a key question in the field of primate behavioral ecology. Drawing on the latest advances in spatial analysis tools, this book offers practical guidance on applying geographic information systems (GIS) to central questions in primatology. An initial methodological section discusses niche modelling, home range analysis and agent-based modelling, with a focus on remote data collection. Research-based chapters demonstrate how ecologists apply this technology to a suite of topics including: calculating the intensity of use of both range and travel routes, assessing the

impacts of logging, mining and hunting, and informing conservation strategies.

The ethics of human/animal relationships is a growing field of academic research and a topic for public discussion and regulatory interventions from law-makers, governments and private institutions. Human/animal relationships are in transformation and understanding the nature of this process is crucial for all those who believe that the enlargement of moral and legal recognition to nonhuman animals is part of contemporary moral and political progress. Understanding the nature of this process means analysing and critically discussing the philosophical, scientific and legal concepts and arguments discussion by bringing together the ideas and reflections of leading experts from different disciplinary backgrounds and with book both provides an up-to-date examination of the transformation of human/animal relationships and presents ideas to foster this process.

The primary theoretical question addressed in this book focuses on the lingering concern of how the ancient Maya in the northern Petén Basin were able to sustain large populations in the midst of a tropical forest environment during the Late Classic period. This book asks how agricultural intensification was achieved and how essential resources, such as water and forest products, were managed in both upland areas and seasonal wetlands, or bajos. All of these activities were essential components of an initially sustainable land use strategy that eventually failed to meet the demands of an escalating population. This spiraling disconnect with sound ecological principles undoubtedly contributed to the Maya collapse. The book's Vehicle Dynamics and Vehicle Systems Design 4. findings provide insights that broaden the understanding of the rise of social complexity - the expansion of the political economy, specifically - and, in general

today's environmental challenges. Many of these terms, the trajectory of cultural evolution of the ancient Maya civilization. Spatial Analysis in Field Primatology Boolarong Press
