"Ancient Gordion has long been recognized as a key Iron Age site for Anatolia and the eastern Mediterranean. Archaeological research has revealed much about its sequence of occupation. However, as yet no study has explored the underlying drivers of political and economic change at this site. This volume presents an overview of the political and economic histories supporting emergent elites and how they constructed power at Gordion during the Iron Age (1200-300 BCE). Based on geochemical and typological analysis of nearly 2000 Late Bronze Age to Hellenistic ceramic

samples, the volume contextualizes this primary dataset through the lens of ceramic production, consumption, exchange and emulation. Synthesizing site data sets, the volume more broadly contributes to our understanding of the pivotal role of groups and their economic, social, and ritual practices in the creation of complex societies"--

This book is a product of Brazilian Academy of Sciences Study Group about water issue. The water cycle was addressed based on an integrated point of view, aiming at joining technological and ecological solutions and integrating quantitative and qualitative aspects of this important environmental asset. Issues such as the water resources management and irrigated agriculture, water and health, water

and economy, conservation and reuse as management tools, water in the Brazilian semi arid, water in Amazon, urbanization and water resources, education for the sustainability of water resources, groundwater, availability, pollution and eutrophication of water and science, technology and innovation are of the utmost importance for this exact moment in Brazil, and particularly to the State of Sao Paulo. Addressing these issues will undoubtedly contribute towards a sustainable management of water resources through the coordinated work of different fields of science, progressing a systemic view about water, that would then finally allow management professionals the possibility of an integral action in anticipating problems and thus anticipate solutions.

This book reports on developments in Proximal Soil Sensing (PSS) and high

resolution digital soil mapping. PSS has become a multidisciplinary area of study that aims to develop field-based techniques for collecting information on the soil from close by, or within, the soil. Amongst others, PSS involves the use of optical, geophysical, electrochemical, mathematical and statistical methods. This volume, suitable for undergraduate course material and postgraduate research, brings together ideas and examples from those developing and using proximal sensors and high resolution digital soil maps for applications such as precision agriculture, soil contamination, archaeology, peri-urban design and high land-value applications, where there is a particular need for high spatial resolution information. The book in particular covers soil sensor sampling, proximal soil sensor development and use, sensor calibrations, prediction methods for large data sets, applications of proximal soil

sensing, and high-resolution digital soil mapping. Key themes: soil sensor sampling – soil sensor calibrations – spatial prediction methods – reflectance spectroscopy – electromagnetic induction and electrical resistivity – radar and gamma radiometrics – multi-sensor platforms – high resolution digital soil mapping - applications Raphael A. Thirty-four years have elapsed since the publication of the late Professor P. Maheshwari's text, *An Introduction to the Embryology of Angiosperms*, a work which for many years served as an invaluable guide for students and a rich source book for research workers. Various texts dealing with sections of the broad spectrum of topics encompassed by Maheshwari in his book have appeared in the interim, but a compendious modern work dealing with the whole field has been lacking. This present volume splendidly

meets the need, and it is altogether fitting that Professor B. M. Iohri, long an associate and close colleague of Professor Maheshwari and himself a prolific contributor to the subject, should have undertaken the task of editing it. When Maheshwari wrote, it was still feasible for one author to handle the subject, but today even someone with his fine breadth of vision and depth of understanding could not, alone, do it justice. So the effort has to be a collaborative one; and Professor Iohri's achievement has been to bring together a team of authoritative collaborators, assign them their responsibilities, and put them to work to produce a text as integrated in its treatment as the diversity of the subject would allow. The product vividly illustrates the advances that have been made in the study of angiosperm reproductive systems in the last 30 years, and the book is surely destined to become the new standard for student and researcher alike.

Love Is A Decision John Wiley & Sons

As the impacts of anthropogenic activities increase in both magnitude and extent, biodiversity is coming under increasing pressure. Scientists and policy makers are frequently hampered by a lack of information on biological systems, particularly information relating to long-term trends. Such information is crucial to developing an understanding as to how biodiversity may respond to global environmental change. Knowledge gaps make it very difficult to develop effective policies and legislation to reduce and

reverse biodiversity loss. This book explores the gap between global commitments to biodiversity conservation, and local action to track biodiversity change and implement conservation action. High profile international political commitments to improve biodiversity conservation, such as the targets set by the Convention on Biological Diversity, require innovative and rapid responses from both science and policy. This multi-disciplinary perspective highlights barriers to conservation and offers novel solutions to evaluating trends in biodiversity at multiple scales.

In this book, the author's discussion of pride, shame and guilt centres on the beliefs involved in the experience of any of these emotions. Through a detailed study,

she shows how these beliefs are alike in that they are directed towards the self and its status, and how they differ in the specific view taken of the self. She illustrates the experience of these three emotions by examples taken from English literature. Unlike invented cases, these supply a context and indicate the complexity of the web in which these emotions usually occur. An examination of integrity makes clear the relevant notion of the self and provides the sense in which some of the emotions of self-assessment are also moral emotions.

Apomixis in Plants presents a comprehensive review of different aspects of asexual seed formation in plants. This is important in plant research since apomixis

could greatly facilitate breeding in important crops. It is also interesting theoretically because it carries problems related to genetic variation and evolution to its extreme. The book features a broad selection of topics, including a historical review of ideas and landmarks in the field; comparisons with other types of asexual reproduction in higher plants and with related phenomena in animals and related plants; a presentation of cytology and embryology of apomicts and the diversified terminology in the field; views on the genetic background of apomixis and environmental effects on its expression; and the interrelation between apomixis and other traits. Additional topics covered include classical and modern theories of sexual versus asexual reproduction;

geographical and taxonomical trends in apomicts; ecological implications of apomixis, and a review of future possibilities for using apomixis in plant breeding. Apomixis in Plants is an important reference volume for researchers and students in all areas of botany, ecology, and plant breeding.

This is an introduction to the magical world of otters with many wonderful photos and distribution maps for each species. The Asian small-clawed otters, often found in zoos, or the sea otter, well-known for lying on its back cracking open shells, may be familiar to many but there are many more fascinating species. Having worked for over 20 years on otter conservation the authors want to share their enthusiasm and passion for these animals. Each species is listed in the IUCN Red Data List and yet little attention is given to their predicament. The illegal wildlife trade in otters is huge not just for furs and body parts but as pets. In some

parts of the world otters are disappearing rapidly and unless urgent action is taken they will be gone forever. It is hoped the book will increase awareness and support for the work of the IOSF (International Otter Survival Fund) which is battling the threat of extinction to several species. Otters stand at the top of the food chain on both land and water so they are an ideal indicator of a healthy environment. With greater awareness and support the IOSF will be able to do more on the world stage to conserve otters as exemplified by the Hairy-Nosed Otter which was rediscovered and helped having been thought extinct. This type of conservation work is vital because so

often the plight of otters is overlooked for other high profile species such as tigers and elephants. Proceeds from the sale of this book will go to the IOSF."
