This is the only comprehensive guide to mapping software that clearly explains how to interface your GPS receiver with your computer to create maps, annotate aerial photos, and even create 3-D maps. It includes where to find free software and maps, how to use aerial photos and satellite imagery, and how to view your favorite backcountry locations in 3-D. It brings sophisticated features once available only to professional cartographers within reach, at low cost or even free, to everyone who loves maps. Readers will discover how to make maps for free, download aerial photos, create and customize their own maps, use hidden tips and tricks, reduce the learning curve and get mapping right away, locate trailheads using a real-time moving map on a laptop or PDA, and how to best transfer information between a GPS, computer, and electronic maps. The rewards of carefully chosen alternative investments can be great. But many investors don't know enough about unfamiliar investments to make wise choices. For that reason, financial advisers Larry Swedroe and Jared Kizer designed this book to bring investors up to speed on the twenty most popular alternative investments: Real estate, Inflation-protected securities, Commodities, International equities, Fixed annuities, Stable-value funds, High-yield (junk) bonds, Private equity (venture capital), Covered calls, Socially responsible mutual funds, Precious metals equities, Preferred stocks, Convertible bonds, Emerging market bonds, Hedge funds, Leveraged buyouts, Variable annuities, Equity-indexed annuities, Structured investment products, Leveraged funds The authors describe how the investments work, the pros and cons of each, which to consider, which to avoid, and how to get started. Swedroe and Kizer evaluate each investment in terms of: Expected returns Volatility Distribution of returns Diversification potential Fees Trading and operating expenses Liquidity Tax efficiency Account location Role in an asset-allocation program Any investor who is considering or just curious about investment opportunities outside the traditional world of stocks, bonds, and bank certificates of deposit would be well-advised to read this book.

10 Years on 2 Wheels SAGE Publications, Incorporated  
New York Times bestselling author Patti Callahan Henry delivers a novel that explores the power of lasting love through the connected stories of two women from opposite sides of the sea. Twenty-seven-year-old Kara Larson is bogged down in the stress of planning her elaborate wedding to a professional golfer. Still, to fulfill the requirements of the Palmetto Pointe Junior Society, she makes time in her busy schedule to visit an elderly woman at a nursing home facility. Soon she finds herself mesmerized by the singsong Irish lilt of ninety-six-year-old Maeve Mahoney as Maeve recounts the rambling story of her first love back in Ireland. Or, Kara begins to wonder, is she really retelling an ancient tale of myth and legend? Waiting for the story to unfold in bits and pieces, and trying to discern the underlying truth, Kara is drawn in—and driven to remember her own first love: childhood neighbor Jack Sullivan. Gradually she realizes that before she embarks on her new life, she must find out how her own story—with Jack—will end. "About all the things that make us worthy as human beings—integrity, honesty, and living the life you are meant to live...A triumph!" —Dorothea Benton Frank "A passionate, unforgettable novel of self-discovery, regret, and the illuminating power of love." —Mary Alice Monroe

Hearing and understanding sound — auditory processing — greatly enriches everyday life and enhances our ability to perform many tasks essential to survival. The complex soundscape in which we live influences where we direct our attention, how we communicate with each other, and how we interact with technological systems. Auditory Cognition and Human Performance: Research and Applications explores how we accomplish this no less than remarkable task. It provides an overview of key auditory sensation and perception topics and mental workload theory, providing those who may be unfamiliar with these topics a foundation on which to understand applied auditory cognition. The book examines the relationship between auditory cognition and human performance, highlighting the nature of situations in which the mental resource requirements of auditory processing may be compromised. It focuses on the importance of increasing our understanding of auditory cognition and its relationship to human performance. Written in an accessible and engaging style, this book balances coverage of basic and applied research, supplies copious examples to explain key concepts, and includes extensive references for further reading and exploration. Bringing together coverage of sensory and cognitive processes, the author discusses how their interaction can be used to improve display design. Despite the relative neglect that auditory processing has received in earlier years, the auditory modality remains a potent source of information with several advantageous and unique characteristics. Over the past two decades there has been a growing base of empirical research on auditory cognition and its role in human performance at work and in everyday life. This book points out many of the questions that have yet to be resolved and provides the understanding needed to design more effective auditory displays, make

better alerts and warnings, and improve communications and a wide variety of other things.

Leverage the powerful Arduino and XBee platforms to monitor and control your surroundings About This Book Build your own low-power, wireless network using ready-made Arduino and XBee hardware Create a complex project using the Arduino prototyping platform A guide that explains the concepts and builds upon them with the help of examples to form projects Who This Book Is For This book is targeted at embedded system developers and hobbyists who have some working knowledge of Arduino and who wish to extend their projects using wireless connectivity. What You Will Learn Interact with XBee boards using the XCTU program on Windows, OS X, or Linux Make your Arduino boards communicate wirelessly, using XBee modules in the advanced API mode Centrally collect and store measured sensor data, in the cloud or your own database Connect the coordinator Arduino to the Internet and send data to web services Control your environment automatically, based on sensor input from your network Interact with off-the-shelf ZigBee Home Automation devices Make your devices battery-powered and let them sleep to get months or even years of battery life In Detail Arduino has been established as the de facto standard microcontroller programming platform, being used for one-off do-it-yourself projects as well as prototypes for actual products. By providing a myriad of libraries, the Arduino community has made it very easy to interact with pretty much any piece of hardware out there. XBee offers a great range of low-power wireless solutions that are easy to work with, by taking all of the complexity of wireless (mesh) networking out of your hands and letting you focus on what to send without worrying about the how. Building wireless sensor networks is cost-effective as well as efficient as it will be done with Arduino support. The book starts with a brief introduction to various wireless protocols, concepts, and the XBee hardware that enables their use. Then the book expands to explain the Arduino boards to you, letting them read and send sensor data, collect that data centrally, and then even control your home from the Internet. Moving further more advanced topics such as interacting through the standard Zigbee Home Automation protocol, or making your application power-efficient are covered. By the end of the book, you will have all the tools needed to build complete, real-world solutions. Style and approach A hands-on guide, featuring a single home automation project that can be built as described or with endless variations. Every step is illustrated with complete examples and screenshots, allowing you to build the examples swiftly.

To help the researcher understand why and how children react to adults who are doing ethnographic research, Fine and Sandstrom explore the methodological and ethical problems of qualitative research with minors. They correct numerous fallacies held by researchers that children think like adults and that they cannot hide their thoughts and feelings from adults, especially strangers. Recognizing that age is an important determinant of children's response, they discuss problems and present strategies for conducting research with three age groups of children: preschool children (4 to 6 year olds), preadolescents (10 to 12) and middle adolescents (14 to 16). This is the first major methodological statement on doing participant observation work w

The Third Edition of Police & Society offers a comprehensive introduction to policing in the United States. Author Roy Roberg is joined by prominent policing scholars Kenneth Novak and Gary Cordner. Their thoroughly revised text is both descriptive and analytical in nature--covering the process of policing, police behavior, organization, operations, and historical perspectives. To adequately explain the complex nature of police operations in a democracy, the authors have integrated the most important theoretical foundations, research findings, and contemporary practices in a comprehensible, yet analytical, manner. Contemporary issues and future prospects of policing are fully addressed. The text features an emphasis on the relationship between the police and the community--as well as how this relationship has evolved over time. The impact of this evolution on current police practices, especially with respect to community policing and policing in the post-9/11 era, is explored. The new edition has been substantially updated and revised, with four new or significantly revised chapters: "Community Policing," "Legal Issues," "Higher Education," and "Contemporary and Emerging Issues." Importantly, new "Voices From the Field" boxes have been added to each chapter. Here, nationally known police officials provide their insights into contemporary police practices and problems in a thought-provoking format. Topics New to the Third Edition: \* Police auditor systems \* Early warning systems \* New forms of police stressors \* Officer safety and fatality reduction \* Terrorism and post-9/11 policing \* Globalization \* Policing and the mentally ill \* Search and seizure \* Legal issues in interrogations \* Civil liability \* Contemporary performance measures \* Racially biased policing/ racial profiling Topics significantly expanded from the last edition include: \* The role of the police in history \* Broken windows \* Community policing today \* Police ethics and deviant behavior \* Use of force, brutality, and oversight mechanisms \* Women in policing \* Police suicide \* Responses to stress \* Officer culture \* Officer discretion \* Police paramilitary units (PPUs) \* Compstat and Quality of Life policing \* Chicago and Madison updates \* Job satisfaction and community policing \* Directed patrols/crackdowns \* Higher education, satisfaction, and discipline \* Demographic changes in American society \* Police technology Police & Society also offers "Inside Policing" themed boxes which feature important research findings and brief descriptions of exemplary police programs and operations. The Third Edition also features an expanded glossary, with key terms at the beginning of each chapter. Ancillaries to enhance instruction include: \* An Interactive Student Study Guide on CD--included with each copy of the book \* A revised, dedicated Website \* All figures and tables in the text available in PowerPoint on CD

Medical researchers have found that a high-fat, high-sugar diet, combined with environmental pollutants and stress, can lead to a buildup of toxins in the body collectively known as chronic degenerative disease. Here holistic physician Gabriel Cousens addresses the dangers of foods that have been genetically modified, treated with pesticides, microwaved, and irradiated—and presents an alternative diet of whole, natural, organic, and raw foods that can reverse chronic disease and restore vitality. Both a guide to natural health and a cookbook, Rainbow Green Live-Food Cuisine features over 250 revolutionary vegan recipes from chefs at the Tree of Life Cafe, from Buttery Butternut Porridge to Raw-violis to Carob Coconut Cream Eclairs. Combining modern research on metabolism, ecological consciousness, and a rainbow of live foods, Dr. Cousens dishes up comprehensive, practical, and delectable solutions to the woes of the Western diet.

Korg Volca Modular - The Expert Guide London : Macmillan Press

In this book historians from museums and academia examine transport artefacts and the systems of mobility in which they are embedded. Large artefacts -- such as the Stephenson's Rocket locomotive, a Lockheed F-104 Starfighter, a Ford Model T -- are impressive manifestations of engineering ingenuity. They help museum visitors understand the design and use of the technologies that move people and goods. But they are also historical icons, so different audiences -- be they professional historians of technology or casual visitors -- will interpret them in different ways. In a transport exhibition individual artefacts can dominate a visitor's attention, overwhelming the themes expressed by other material. The power of such an artefact helps to attract interest, but at the same time endangers its incorporation into a larger system. Curators have to find ways to demonstrate the systemic nature of transport by integrating these objects with others: the smaller component artefacts, such as electrochemical batteries, pneumatic tyres and dashboards; and the social artefacts, such as drivers, consumers, rules and institutions. The authors consider a variety of transport artefacts, from pioneering steam locomotives and early automobile interiors, to jet engines and the automatically guided cars of the future. Those with curatorial responsibilities also reflect on how theoretical notions about transport can be expressed in the

practical context of a museum, and how a reappraisal of visitors' responses to transport artefacts is leading to new ways of showcasing the history of mobility.

Astrology is finally getting personal! From the best-selling author of The Secret Language of Birthdays comes a revolution in charting your horoscope based on both the date and time of your birth that makes all other horoscope books irrelevant. With his "Personology" system, Gary Goldschneider has created a unique method which divides each of the twelve signs into five sub-types-such as Aquarius-Pisces Cusp, Pisces I, Pisces II, Pisces III, and Pisces-Aries Cusp--thereby sub-dividing the astrological year into 48 personology periods. The precision this allows is far beyond anything available in any other astrology book and provides a ground-breaking new way for readers to look not only at their own lives, but their interactions with those around them. The book comes packed with easy-to-follow charts covering the sun, eight different planets, and, unique to this book, the rapid fluctuations of the moon for every year from 1900 through 2025. The result is an unprecedented level of precision, as well as a beautifully illustrated volume destined to become the one and only book horoscope readers will treasure for the next twenty years.
