Fundamentals of Materials Science and Engineering takes an integrated approach to the sequence of topics – one specific structure, characteristic, or property type is covered in turn for all three basic material types: metals, ceramics, and polymeric materials. This presentation permits the early introduction of non-metals and supports the engineer's role in

choosing materials based upon their characteristics. Using clear, concise terminology that is familiar to students, *Fundamentals* presents material at an appropriate level for both student comprehension and instructors who may not have a materials background.
