The Rough Guide to China covers of all of mainland China including Tibet, along with the special administrative regions of Hong Kong and Macau. Clear, detailed maps show all listed arrival points, accommodation, restaurants and sights, while boxes provide bilingual keys. Use it to explore the sophisticated nightlife emerging in Beijing and Shanghai, to chill out in the mellow travellers' havens of Dali and Yangshuo, or roam the streets of characterful antique towns such as Lijiang. Up to date descriptions give the low-down on famous sights such as Beijing's Forbidden City, the Terracotta Army outside Xi'an, limestone peaks around Guilin and the cruise through the mighty Three Gorges along the Yangzi. There's also full practical information for less-known attractions: hiking holy mountains such as Shandong's Tai Shan; where to experience the culture of China's many ethnic groups, including Tibetans, Miao, Dai and Mongolians; how to explore remoter rural areas; and where to experience local food, from streetside snack stalls to plush Beijing Duck restaurants.

The machinery about which I am writing is found in the confectionery industry, but it is also generally used throughout the food industry and some other areas that produce items that need to be wrapped and packed for distribution. It just happens that much of my working life was spent in the confectionery industry. Similar machinery operates in the pharmaceutical industry, is used for wrapping and handling books, for wrapping blocks of fuel and for packing tea and other items. Some of the robots described are used in the glass industry, loading drinking glasses direct from hot moulding plants. They are used to load filled bottles into cases in the drinks business or shampoo for chemical manufacturers. Other industries, for example the textile industry, used machinery designed for other purposes (such as weaving), before the development of packaging machines, that worked on comparable principles. Some of the mechanisms in all of this machinery possibly have their ancestry in the great cathedral clock mechanisms from as early as the fifteenth century. Just because this book is mainly illustrated by reference to chocolate bars and sweets does not mean that that is the only application, nor does it lessen the ingenuity applied in the designs of these machines or their importance in the modern world.
