Baum and Smith, both professors evolutionary biology and researchers in the field of systematics, present this highly accessible introduction to phylogenetics and its importance in modern biology. Ever since Darwin, the evolutionary histories of organisms have been portrayed in the form of branching trees or "phylogenies." However, the broad significance of the phylogenetic trees has come to be appreciated only quite recently. Phylogenetics has myriad applications in biology, from discovering the features present in ancestral organisms, to finding the sources of invasive species and infectious diseases, to identifying our closest living (and extinct) hominid relatives. Taking a conceptual approach, Tree Thinking introduces readers to the interpretation of

phylogenetic trees, how these trees can be reconstructed, and how they can be used to answer biological questions. Examples and vivid metaphors are incorporated throughout, and each chapter concludes with a set of problems, valuable for both students and teachers. Tree Thinking is must-have textbook for any student seeking a solid foundation in this fundamental area of evolutionary biology. Bayesian Methods for Structural Dynamics and Civil Engineering Springer Science & Business Media

This well organized text provides the design techniques of algorithms in a simple and straight forward manner. It describes the complete development of various algorithms along with their pseudo-codes in order to have an understanding of their applications. The book begins with a description of the fundamental concepts and basic design techniques of algorithms. Gradually, it introduces more complex and advanced topics such as dynamic programming, backtracking and various algorithms related to graph data structure. Finally, the text elaborates on NP-hard, matrix operations and sorting network. Primarily designed as a text for undergraduate students of Computer Science and Engineering and Information

Technology (B.Tech., Computer Science, B.Tech. IT) and postgraduate students of Computer Applications (MCA), the book would also be quite useful to postgraduate students of Computer Science and IT (M.Sc., Computer Science; M.Sc., IT). This book is divided into four parts. The first part, Preliminaries, begins by introducing the basic theme of the book. It provides an overview of the current status of water resources utilization, the likely scenario of future demands, and advantages and disadvantages of systems techniques. An understanding of how the hydrological data are measured and processed is important before undertaking any analysis.

The discussion is extended to emerging techniques, such as Remote Sensing, GIS, Artificial Neural Networks, and Expert Systems. The statistical tools for data analysis including commonly used probability distributions, parameter estimation, regression and correlation, frequency analysis, and time-series analysis are discussed in a separate chapter. Part 2 Decision Making, is a bouquet of techniques organized in 4 chapters. After discussing optimization and simulation, the techniques of economic analysis are covered. Recently, environmental and social aspects, and rehabilitation and resettlement of project-affected people have come to occupy a central stage in water resources management and any good book is incomplete unless these topics are adequately covered. The concept of rational decision making along with risk, reliability, and uncertainty aspects form subject matter of a chapter. With these analytical tools, the practitioner is well equipped to take a rational decision for water resources utilization. Part 3 deals with Water Resources Planning and Development. This part discusses the concepts of planning, the

planning process, integrated planning, public involvement, and reservoir sizing. The last part focuses on Systems Operation and Management. After a resource is developed, it is essential to manage it in the best possible way. Many dams around the world are losing some storage capacity every year due to sedimentation and therefore, the assessment and management of reservoir sedimentation is described in details. No analysis of water resources systems is complete without consideration of water quality. A river basin is the natural unit in which water occurs. The final chapter discusses various issues related to holistic management of a river basin.

The fast multipole method is one of the most important algorithms in computing developed in the 20th century. Along with the fast multipole method, the boundary element method (BEM) has also emerged as a powerful method for modeling large-scale problems. BEM models with millions of unknowns on the boundary can now be solved on desktop computers using the fast multipole BEM. This is the first book on the fast multipole BEM, which brings together the classical theories in BEM formulations and the recent development of the fast multipole method. Two- and three-dimensional potential, elastostatic, Stokes flow, and acoustic wave problems are covered, supplemented with exercise problems and computer source codes. Applications in modeling nanocomposite materials, bio-materials, fuel cells, acoustic waves, and image-based simulations are demonstrated to show the potential of the

fast multipole BEM. Enables students, researchers, and engineers to learn the BEM and fast multipole method from a single source.

Managing Organizations (For GBTU)
AFURAKA/AFURAITKAIT - The Origin of the term 'Africa' Numerous scholars over the centuries have attempted to delineate the etymological origins of the name Africa. However, they have failed because of a lack of understanding of Afurakani/Afuraitkaitnit (African) Ancestral Religion, cosmology and culture. Odwirafo Kwesi Ra Nehem Ptah Akhan is the first to elucidate and publish the actual etymological origins of the name Africa demonstrating the name to be derived linguistically and cosmologically from Afuraka/Afuraitkait – the original male and female aspects of the name. This includes showing the actual term written by our Afurakani/Afuraitkaitnit (African) Ancestresses and Ancestors in the medutu (hieroglyphs) of Ancient Kamit (Ancient Egypt) – a discovery which heretofore had never been accomplished. Afuraka/Afuraitkait is an indigenous designation for the continent first propounded by Afurakanu/Afuraitkaitnut (Africans~Black People) prior to the existence of any other people on Earth. The myths put forward by eurasians seeking to locate the origins of the name Africa outside of the continent of Afuraka/Afuraitkait (Africa) and in the greek, latin, sanskrit, arabic, phoenician and other languages, have been shown in this article

series to be a deliberate attempt by the non-Afurakanu/non-Afuraitkaitnut (non-Africans/non-Blacks) to misinform Afurakanu/Afuraitkaitnut (Africans~Black People) and dispossess us of our heritage and culture. This is nothing new. We have been and will continue to be at war - culturally, intellectually, spiritually and physically - with the whites and their offspring, their culture and their pseudo-religions (inclusive of all forms of christianity, islam, judaism/hebrewism, hinduism, buddhism, taoism, pseudo-esotericism, etc.) until the whites and their offspring no longer exist in the world. We will always meet the challenge and will emerge triumphant on every level. The proper etymology of the term Africa was first given to us in the 12990s (1990s) by our Nananom Nsamanfo – Akan term for our Honored or Spiritually Cultivated Afurakani/Afuraitkaitnit (African) Ancestresses and Ancestors. It was our Nananom Nsamanfo who would also lead us to the tangible evidence supporting the etymological origins of the term in the languages, cultures and ritual practices of Afuraka/Afuraitkait (Africa) – inclusive of Ancient Khanit and Kamit (Nubia and Egypt). We would subsequently release our publication: KUKUU-TUNTUM The Ancestral Jurisdiction in 13002 (2002), wherein we defined the term Afuraka/Afuraitkait and its cosmological roots in the first section. The release of our article series in 13007-13008 was designed to provide a more detailed analysis of the nature and function of the name Afuraka/Afuraitkait (Africa) as it applies to Black People – and Black People only – and to

expose the misinformation which continues to be propagated deliberately by the whites and their offspring, as well as by misinformed Afurakani/Afuraitkaitnit (African~Black) scholars, teachers, authors, etc. This four-part series is the first volume of a greater series. There are numerous manifestations of the term and name Afuraka/Afuraitkait (Africa) all over the continent and in the places we traveled after having migrated away from the continent thousands of years ago for the first time in our trustory. This is an attestation to the ancient spiritual roots of the name Afuraka/Afuraitkait. The information can and will fill many volumes. This is a never-ending project. ©Copyright by Odwirafo Kwesi Ra Nehem Ptah Akhan, 13007, 13008, 13011, 13014 (2007, 2008, 2011, 2014). All rights reserved.

The goal of this book is to make a link between fundamental research in the field of cognitive neurosciences, which now benefits from a better knowledge of the neural foundations of cerebral processing, and its clinical application, especially in neurosurgery – itself able to provide new insights into brain organization.

The anatomical bases are presented, advances and limitations of the different methods of functional cerebral mapping are discussed, updated models of sensorimotor, visuospatial, language, memory, emotional, and executive functions are explained in detail. In the light of these data, new strategies of surgical management of cerebral lesions are proposed, with an optimization of the benefit – risk ratio of surgery. Finally, perspectives about brain connectivity and plasticity are discussed on the basis of translational studies involving serial functional neuroimaging, intraoperative cortico-subcortical electrical mapping, and biomathematical modeling of interactions between parallel distributed neural networks.

Co-Synthesis of Hardware and Software for Digital Embedded Systems, with a Foreword written by Giovanni De Micheli, presents techniques that are useful in building complex embedded systems. These techniques provide a competitive advantage over purely hardware or software implementations of time-constrained embedded systems. Recent advances in chip-level synthesis have made it possible to

synthesize application-specific circuits under strict timing constraints. This work advances the state of the art by formulating the problem of system synthesis using both application-specific as well as reprogrammable components, such as off-the-shelf processors. Timing constraints are used to determine what part of the system functionality must be delegated to dedicated application-specific hardware while the rest is delegated to software that runs on the processor. This co-synthesis of hardware and software from behavioral specifications makes it possible to realize real-time embedded systems using off-the-shelf parts and a relatively small amount of application-specific circuitry that can be mapped to semi-custom VLSI such as gate arrays. The ability to perform detailed analysis of timing performance provides the opportunity of improving the system definition by creating better phototypes. Co-Synthesis of Hardware and Software for Digital Embedded Systems is of interest to CAD researchers and developers who want to branch off into the expanding field of hardware/software co-design, as well as to digital system designers who are interested

in the present power and limitations of CAD techniques and their likely evolution. A Text Book of Engineering Mathematics W W Norton & Company Incorporated Programming in C: A Practical Approach has a perfect blend of theory as well as practical knowledge. The presentation has been done in such a way that it helps the readers to learn the concepts through practice and programming. AFURAKA/AFURAITKAIT - The Origin of the term 'Africa' Krishna Prakashan Media This volume problematizes different facets of management education in India---pedagogy, curricula, and disciplinary and institutional practices---from the perspective of the Global South. The essays in this volume bring out the institutional challenges of crafting a relevant academic programme that converses with both national specificities and global realities. Coming from diverse academic specializations, the contributors traverse the interface of their respective disciplines with management education. In doing so, they engage with the ongoing global debate on management education. This volume fills a noticeable gap of serious, scholarly reflection on the state of management education. While there have been sporadic reflections and occasional critiques, a critical stocktaking of the institutional and disciplinary aspects of management education has been long wanting. This volume is of interest to scholars and practitioners of management education across the globe, and is likely to generate

debate on its contemporary relevance and future trajectory.
