New GCSE Maths Edexcel Practice Papers: Higher - For the Grade 9-1 Course Cambridge University Press

There is a queue, the phone is ringing, the photocopier has jammed and your enquirer is waiting for a response. You are stressed and you can feel the panic rising. Where do you go to find the information you need to answer the question promptly and accurately? Answering queries from users is one of the most important services undertaken by library and information staff. Yet it is also one of the most difficult, least understood subjects. There are still very few materials available to help frontline staff - often paraprofessional - develop their reader enquiry skills. This award-winning sourcebook is an essential guide to where to look to find the answers quickly. It is designed as a first point of reference for library and information practitioners, to be depended upon if they are unfamiliar with the subject of an enquiry - or wish to find out more. It is arranged in an easily searchable, fully cross-referenced A-Z list of around 150 of the subject areas most frequently handled at enquiry desks. Each subject entry lists the most important information sources and where to locate them, including printed and electronic sources, relevant websites and useful contacts for referral purposes. The authors use their extensive experience in reference work to offer useful tips, warn of potential pitfalls, and spotlight typical queries and how to tackle them. This new edition has been brought right up-to-date with all sources checked for currency and many new ones added. The searchability is enhanced by a comprehensive index to make those essential sources even easier to find - saving you valuable minutes! Readership: Offering quick and easy pointers to a multitude of information sources, this is an invaluable reference deskbook for all library and information staff in need of a speedy answer, in reference libraries, subject departments and other information units.

*How I Wish I Had Taught Maths* Nelson Thornes

This book supports students preparing for the Edexcel GCSE exam. The practice papers in the book are carefully modelled after past papers and specifications of exam board to ensure that the papers as a whole provide a rich and varied practice to meet all requirements of GCSE mathematics with an appropriate difficulty. Papers are designed to teach students the most easily applicable, reusable and fastest solutions to typical problems, and utilise problems which target areas of maths which students typically forget under the pressure of an exam. Solutions provided have been reviewed by many students to ensure that they are easily understandable while being the fastest and most re-applicable.

New Edexcel International GCSE Maths Grade 8-9 Targeted Exam Practice Workbook (includes Answers) Cambridge University Press

If you feel a bit cross at the presumption of some oik daring to suggest everything you know about education might be wrong, please take it with a pinch of salt. What if everything you knew about education was wrong? is just a title. Of course, you probably think a great many things that aren't wrong. The aim of the book is to help you 'murder your darlings'. David Didau will question your most deeply held assumptions about teaching and learning, expose them to the fiery eye of reason and see if they can still walk in a straight line after the experience. It seems reasonable to suggest that only if a theory or approach can withstand the fiercest scrutiny should it be encouraged in classrooms. David makes no apologies for this; why wouldn't you be sceptical of what you're told and what you think you know? As educated professionals, we ought to strive to assemble a more accurate, informed or at least considered understanding of the world around us. Here, David shares with you some tools to help you question your assumptions and assist you in picking through what you believe. He will stew findings from the shiny white laboratories of cognitive psychology, stir in a generous dash of classroom research and serve up a side order of experience and observation. Whether you spit it out or lap it up matters not. If you come out the other end having vigorously and violently disagreed with him, you'll at least have had to think hard about what you believe. The book draws on research from the field of cognitive science to expertly analyse some of the unexamined meta-beliefs in education. In Part 1; 'Why we're wrong', David dismantles what we think we know; examining cognitive traps and biases, assumptions, gut feelings and the problem of evidence. Part 2 delves deeper - 'Through the threshold' - looking at progress, liminality and threshold concepts, the science of learning, and the difference between novices and experts. In Part 3, David asks us the question 'What could we do differently?' and offers some considered insights into spacing and interleaving, the testing effect, the generation effect, reducing feedback and why difficult is desirable. While Part 4 challenges us to consider 'What else might we be getting wrong?'; cogitating formative assessment, lesson observation, grit and growth, differentiation, praise, motivation and creativity.
