- Demonstrate clinical utility of

GDT and hemodynamic optimization using case presentations. Illustrated with diagrams and case examples, this is an important resource for anesthesiologists, emergency physicians, intensivists and pulmonologists as well as nurses and administrative officers.

Theory of Subjectivity from a Cultural-Historical Standpoint B&H Publishing Group

Stochastic geometry is the branch of mathematics that studies geometric structures associated with random configurations, such as random graphs, tilings and mosaics. Due to its close ties with stereology and spatial statistics, the results in this area are relevant for a large number of important applications, e.g. to the mathematical modeling and statistical analysis of telecommunication networks, geostatistics and image analysis. In recent years – due mainly to the impetus of the authors and their collaborators – a powerful connection has been established between stochastic geometry and the Malliavin calculus of variations, which is a collection of probabilistic techniques based on the properties of infinite-dimensional differential operators. This has led in particular to the discovery of a large number of new quantitative limit theorems for high-dimensional geometric objects. This unique book presents an organic collection of authoritative surveys written by the principal actors in this rapidly evolving field, offering a rigorous yet lively presentation of its many facets.

Foundations of Mathematical Logic B&H Publishing Group

This collection of essays brings together eighteenth-century scholars from a variety of disciplines, to discuss conversation in the eighteenth century as concept and practice. At the heart of the volume is a simple question: are eighteenth-century conceptualisations of the role and purpose of conversation still relevant or useful to scholars and thinkers today? This volume contains essays by leading scholars of the period as well as early career researchers, and answers a need for a broad-ranging discussion of the concept of conversation in the arts, social sciences and humanities. The long eighteenth century is a particularly fruitful starting point for work on this topic, since ideas about conversation permeated all types of writing in this period, from the early forerunners of scientific textbooks to philosophical dialogues. The collection covers an exceptionally wide range of long-

eighteenth-century authors, artists, lawmakers, texts and works of art, and, although the focus of the volume is largely on eighteenth-century Britain, the volume takes note of the rich relationships between continental European thought and British intellectual life in the period, and of the influence of British ideas in the newly independent American republic.

Dogtown Taylor & Francis

An increasing complexity of models used to predict real-world systems leads to the need for algorithms to replace complex models with far simpler ones, while preserving the accuracy of the predictions. This two-volume handbook covers methods as well as applications. This second volume focuses on applications in engineering, biomedical engineering, computational physics and computer science.

Nietzsche, Wagner and the Philosophy of Pessimism Hendrickson Publishers

This book examines key ideas related to the Theory of Subjectivity within a cultural-historical approach. It brings together the intellectual contributions made by Professor Fernando González Rey (1949–2019) towards understanding human subjectivity, and emphasizing their unfolding in different fields and contexts. The book addresses the genesis and development of González Rey's work, articulating this discussion with the author's biography. González Rey's main scientific contribution is the Theory of Subjectivity in a cultural-historical perspective, which is inseparable from Qualitative Epistemology and from its constructive-interpretive methodological expression. The book presents and discusses González Rey's contributions to different contexts and fields, such as psychological research, education, cultural-historical psychology, human development, motivation, human health and psychotherapy. This book brings together examples of how these ideas have been employed and developed in different fields and contexts.

Fire Bible-NIV-Global Study Rodopi
This collection of critical essays celebrates the subversive and challenging creativity of the Dada movement, born in pacifist Zurich in 1916 in violent reaction to the First World War. It examines the collective and individual activities that took place under the name of Dada in Zurich, Cologne, Berlin, Paris, New

York and Barcelona, and explores the various creative forms employed, including text, collage, photomontage, objects, dance, performance and film. The authors suggest new ways of understanding the work of the most famous Dadaists, while also casting light on the contribution of hitherto neglected figures. Far from attempting to reduce Dada to a homogeneous movement, or to define a unifying principle beneath and beyond the multiple directions taken by Dadaists, this collection aims to respect the diversity and heterogeneity of the movement's collective activities as well as the specificity of its individual actors.

Remote Sensing for Landscape Ecology: New Metric Indicators Courier Corporation

"The attribution of profits to permanent establishments (PEs) is probably one of the most complex subjects of the international tax arena. The interaction of treaty rules and domestic legislations sometimes leads to unacceptable results such as double taxation or double non-taxation. This book compares the tax treatment of cross-border dealings between different parts of the same enterprise in several countries." --Extracted from publisher website on June 29, 2016

[NIV Life Application Study Bible, Third Edition, Personal Size](#) Kluwer Law International B.V.

This book sets up a dialogue between Emmanuel Levinas and Theodor W. Adorno, using their thought to address contemporary environmental and social-political situations. Eric S. Nelson explores the "non-identity thinking" of Adorno and the "ethics of the Other" of Levinas with regard to three areas of concern: the ethical position of nature and "inhuman" material others such as environments and animals; the bonds and tensions between ethics and religion and the formation of the self through the dynamic of violence and liberation expressed in religious

discourses; and the problematic uses and limitations of liberal and republican discourses of equality, liberty, tolerance, and their presupposition of the private individual self and autonomous subject. Thinking with and beyond Levinas and Adorno, this work examines the possibility of an anarchic hospitality and solidarity between material others and sensuous embodied life.
