"In this illuminating, multi-pronged cultural and performance history of such phenomena as Chautauqua and radio, movies, and electrical technology, Timothy Raphael puts together a compelling and sometimes revelatory narrative of how commandingly Reagan mastered the matrix of performance, technology, media, celebrity, and the 'republic of consumption' he came of age in." ---Dana Nelson, Vanderbilt

University "Garry Wills and others have written well on the phenomenon of Ronald Reagan, the actor-president, but this is the first book by a real authority---trained in performance and fully reflective about it from the inside . . . unquestionably an important contribution to the disciplinary fields of American studies and performance studies, and an important contribution to public affairs." ---Joseph Roach, Yale University When Ronald Reagan first entered politics in 1965, his public profile as a performer in radio, film, television, and advertising and his experience in public relations proved invaluable political assets. By the time he left office in 1989, the media in which he trained had become the primary source for generating and wielding political power. The President Electric: Ronald Reagan and the Politics of Performance reveals how the systematic employment of the techniques and technologies

of mass-media performance contributed to Reagan ' s rise to power and defined his style of governance. The President Electric stands out among books on Reagan as the first to bring the rich insights of the field of performance studies to an understanding of the Reagan phenomenon, connecting Reagan's training in electronic media to the nineteenth-century notion of the "fiat of electricity"---the emerging sociopolitical power of three entities (mechanical science, corporate capitalism, and mass culture) that electric technology made possible. The book describes how this new regime of cultural and political representation shaped the development of the electronic mass media that transformed American culture and politics and educated Ronald Reagan for his future role as president. Timothy Raphael is Assistant Professor of Visual and Performing Arts and Director of the Center for Immigration at Rutgers University, Newark.

In my opinion, unless you're a total introvert, agoraphobic, disabled or too lazy to leave the house, your best bet to buy most things you need is locally. Go to the Yellow Pages, read your local newspapers, drive around the shopping areas, go to local free ad websites and talk to people you know about what you need. I generally buy most of my stuff from the big department stores but if I need something like furniture, I'll check out the furniture stores on the poor side of the town because the prices for the same goods are often much cheaper than a store in the higher class part of town plus you can often haggle with the owner on a cash deal. By shopping on the poor side of town at supermarkets for food, you can often save several dollars on a load of groceries. Beyond that, I generally go to the thrift stores a few times a year to buy t-shirts, clothes and anything else that strikes my fancy as I look around.

All-electric Narratives is the first in-depth study of time-saving electrical appliances in American literature. It examines the literary depiction of refrigerators, vacuum cleaners, oven ranges, washing machines, dryers, dishwashers, toasters, blenders, standing and hand-held mixers, and microwave ovens between 1945, when the all-electric home came to be associated with the nation's hard-won victory, and 2020, as contemporary writers consider the enduring material and spiritual effects of these objects in the 21st century. The appropriation and subversion of the rhetoric of domestic electrification and time-saving comprises a crucial, but overlooked, element in 20th-century literary forms and genres including Beat literature, Black American literature, second-wave feminist fiction, science fiction, and postmodernist fiction. Through close-readings of dozens of literary texts alongside print and television

ads from this period, Dini shows how U.S. writers have unearthed the paradoxes inherent to claims of appliances' capacity to give back time to their user, transport them into a technologically-progressive future, or return them to some pastoral past. In so doing, she reveals literary appliances' role in raising questions about gender norms and sexuality, racial exclusion and erasure, class anxieties, the ramifications of mechanization, the perils and possibilities of conformity, the limitations of patriotism, and the inevitable fallacy of utopian thinking-while both shaping and radically disrupting the literary forms in which they operated.

People use lots of water for drinking, cooking and washing, but significantly more for producing things such as food, paper and cotton clothes. The water footprint is an indicator of water use that looks at both direct and indirect water use of a consumer or producer. Indirect use refers to the 'virtual water' embedded in tradable goods and commodities, such as cereals, sugar or cotton. The water footprint of an

individual, community or business is defined as the total volume of freshwater that is used to produce the goods and services consumed by the individual or community or produced by the business. This book offers a complete and up-to-date overview of the global standard on water footprint assessment as developed by the Water Footprint Network. More specifically it:

- o Provides a comprehensive set of methods for water footprint assessment
- o Shows how water footprints can be calculated for individual processes and products, as well as for consumers, nations and businesses
- o Contains detailed worked examples of how to calculate green, blue and grey water footprints
- o Describes how to assess the sustainability of the aggregated water footprint within a river basin or the water footprint of a specific product
- o Includes an extensive library of possible measures that can contribute to water footprint reduction
