This book discusses the ways in which characteristics of innovative firms and innovative talents with core competence in Japanese, Korean, German, and American contexts are developed and nurtured, and compares

innovative firms with a long history of business operations from these four countries. Firstly, the book examines innovation practices of long-lived Japanese firms and compares them with those of German, American and Korean firms. Based on extensive interviews with executives and field studies, it identifies the essential qualities of each country in which these innovative firms and innovative talents are found. It then focuses on theoretical and practical aspects, using the theoretical framework to define organizational and technological factors for long-term innovation success. Further, the book provides recommendations based on organizational practices for developing innovative talents in Japanese, German, American and Korean contexts. Intended for academics, students and practitioners in the areas of organizational theory and strategic management, this book clarifies the critical practices of long-lived innovative firms and organizational innovators.

Service Operations Management John Wiley & Sons

This book gathers national and international reports from around the globe on key issues in the field of antitrust and intellectual property. Its first part discusses to what extent competition law should be concerned with differences in prices, terms and conditions, or quality that suppliers offer different purchasers. A detailed international report explores the major trends and challenges in this field and provides an

excellent comparative study on this complex and challenging subject. In turn, the second part examines whether there should be legal restrictions on the ability of persons who claim, without sufficient justification, to hold IP rights that have been infringed on, to bring, or to threaten to bring, legal proceedings based on such claims against their competitors or others. In this regard, the book brings together the current legal responses across a number of European countries and elsewhere in the world, all summarised and elaborated on in an international report. The book also includes the resolutions passed

---

by the General Assembly of the International League of Competition Law (LIDC) following debates on each of these topics, which include proposed solutions and recommendations. The LIDC is a long-standing international association that focuses on the interface between competition law and intellectual property law, including unfair competition issues.

Corporate Explorers Transform Disruption Into Opportunity With This Proven Framework Innovation used to be seen as a game best left to entrepreneurs, but now a new breed of corporate managers is flipping this logic on its head. These Corporate Explorers have the insight, resilience, and discipline to overcome the obstacles and build new ventures from inside even the largest organizations.  
Corporate Explorers are part entrepreneurs,

---

using innovation disciplines to jump start cutting-edge ideas, and part change leaders, capable of creating support for investment. They see that corporations already own the ideas, resources, and—critically—the talent to build new ventures. Companies like Amazon, Microsoft, Bosch, LexisNexis, and Analog Devices enable managers to put these assets to use and gain an upper hand over startups that threaten to disrupt them. Corporate Explorer is a guidebook to the practices that enable these managers to go from idea into action. It demonstrates how success is not only

possible but may offer entrenched companies better odds than venture-capital backed startups. This actionable and proven framework explains how managers can become successful corporate innovators; it includes tools to: Learn how to apply innovation practices with greater discipline Turn great ideas into a full-time job as an innovation leader Experiment with and scale original business models Transform innovation programs into a thriving source of new business Attract, retain, and motivate entrepreneurial talent Energize employees by creating a realistic way to innovate These

---

lessons come from the trailblazers of corporate innovation—Andrew Binns (Change Logic), Charles O'Reilly (Stanford Graduate School of Business), and Michael Tushman (Harvard Business School)—who have decades of experience helping entrepreneurial-minded executives activate employees to become Corporate Explorers. Entrepreneurs take notice—it's time for Corporate Explorers to set the pace and chart the course for disruption. Intelligent Manufacturing

Designed for

executives of companies that manufacture or sell products and students in an MBA program, this book outlines the challenges of launching a service and solutions business within a product-oriented organization. You might view services and solutions as a means to financial growth, reduced revenue volatility, greater differentiation from the competition, increased share of customer budget, and improved customer satisfaction, loyalty, and lock-in; but the authors visualize the transition from products sold to services rendered and identify the challenges that leaders will face

---

during the transformation. Inside, the authors provide a framework—the service infusion continuum—to describe the different types of services and solutions that a product-rich company can offer beyond warranties, call centers, and websites that support customers in their use of products. **CYBER-PHYSICAL SYSTEMS** The 13 chapters in this book cover the various aspects associated with Cyber-Physical Systems (CPS) such as algorithms, application areas, and the improvement of existing technology such as machine

learning, big data and robotics. Cyber-Physical Systems (CPS) is the interconnection of the virtual or cyber and the physical system. It is realized by combining three well-known technologies, namely “ Embedded Systems, ” “ Sensors and Actuators, ” and “ Network and Communication Systems. ” These technologies combine to form a system known as CPS. In CPS, the physical process and information processing are so tightly connected that it is hard to distinguish the individual contribution of each process from the output. Some exciting

---

innovations such as autonomous cars, quadcopter, spaceships, sophisticated medical devices fall under CPS. The scope of CPS is tremendous. In CPS, one sees the applications of various emerging technologies such as artificial intelligence (AI), Internet of Things (IoT), machine learning (ML), deep learning (DL), big data (BD), robotics, quantum technology, etc. In almost all sectors, whether it is education, health, human resource development, skill improvement, startup strategy, etc., one sees an enhancement in the quality of output because of the emergence of CPS into

the field. Audience Researchers in Information technology, artificial intelligence, robotics, electronics and electrical engineering.

Provides in-depth descriptions of digital transformation technologies and tools Covers various research accomplishments in this flourishing field of relevance Includes many detailed industry use cases with all the right information Plunkett's Transportation, Supply Chain & Logistics Industry Almanac John Wiley & Sons This book sheds light on three essential

questions: 1. What is the likely supply of gasoline and diesel from oil worldwide to power light vehicles and trucks through 2030-2035? 2. Could any other fuel economically replace gasoline? Will different parts of the world answer that question differently? 3. How will the answers to these questions affect what we engineer, make, and drive in 2030 – 2035? As difficult as it is to predict timing of these events, the book presents reasonable assumptions and alternative scenarios. Since a switch to alternative technologies will require substantial investment, it is critical to have a sense of when. Despite the global reach of the automotive industry, it is unlikely that a solution for one

---

region will fit all. A more reasonable goal is a set of projected 'ecosystems' using differing amounts of oil, electricity, or alternative fuels. From this, automotive managers and leaders can get a sense of how to make business decisions for the future. To frame comparisons, the author qualitatively assesses each alternative against these criteria: 1. energy density 2. scale 3. efficiency of use 4. consumer convenience 5. vehicle technical maturity 6. delivery infrastructure maturity 7. production infrastructure maturity 8. rate of progress Some alternative fuels will naturally be higher in some categories than others. For example, gasoline has higher energy density but when burned in internal

combustion engines, has low efficiency. Batteries, on the other hand, have low energy density but are efficient for powering electric motors. For mapping out a long-term future and deciding how best to invest resources, a comparison of these critical criteria should help. The book is concisely written for executives, decision-makers, academics, automotive engineers and others who want or need a long-range view of trends that will influence vehicle fuels for the next 20 years. Canada, the Provinces, and the Global Nuclear Revival Academic Press As the world struggles to meet the growing international demands for electricity, green energy, and alternatives to fossil fuels, the

---

nuclear power sector is experiencing global growth. Nuclear reactors are being designed and constructed at record rates, and Canada is joining the trend, with several provinces considering an expansion of their nuclear presence. Canada, the Provinces, and the Global Nuclear Revival critically examines Canadian nuclear policy in order to show how historic, environmental, economic, and political factors have shaped the direction of the nation's energy industry. Duane Bratt presents a comparative study of the Canadian nuclear sector - using a framework of interest-based coalitions - in its response to the global revival, analyzing nuclear development in Ontario, New Brunswick,

Saskatchewan, and Alberta. The book also answers fundamental questions such as: Has Canada seized international opportunities in uranium mining, reactor sales, and cooperation with other countries in nuclear research? To what extent has the industry been consolidated through mergers and acquisitions, foreign investment, and the privatization of crown corporations? A state-of-the-art exploration of Canada's place in the rapidly shifting world of electricity production by an acclaimed expert in the field, Canada, the Provinces, and the Global Nuclear Revival is a major contribution to the international nuclear debate.
