Designing Exoskeletons focuses on developing exoskeletons, following the lifecycle of an exoskeleton from design to manufacture. It demonstrates how modern technologies can be used at every stage of the process, such as design methodologies, CAD/CAE/CAM software, rapid prototyping, test benches, materials, heat and surface treatments, and manufacturing processes. Several case studies are presented to provide detailed considerations on developing specific topics. Exoskeletons are designed to provide work-power, rehabilitation, and assistive training to sports and military applications. Beginning with a review of the

history of exoskeletons from ancient to modern times, the book builds on this by mapping out recent innovations and state-of-the-art technologies that utilize advanced exoskeleton design. Presenting a comprehensive guide to computer design tools used by bioengineers, the book demonstrates the capabilities of modern software at all stages of the process, looking at computer-aided design, manufacturing, and engineering. It also details the materials used to create exoskeletons, notably steels, engineering polymers, composites, and emerging materials. Manufacturing processes, both conventional and unconventional are discussed—for example, casting, powder metallurgy, additive manufacturing, and heat and surface treatments. This book is essential reading for those in the field of exoskeletons, such as designers, workers in research and development, engineering and design students, and those interested in robotics applied to medical devices.

With the fast growth of Chinese economy, the number of people learning Chinese language is increasing rapidly throughout the world. A Handbook for Analyzing Chinese Characters is intended to help those studying Chinese as a second language. It includes 5073 most frequently used Chinese characters in reading and writing. To help learners identify the most important to the least important characters, the 5073 characters are grouped into five different usage levels. Besides, they are formed with pictographic characters, self-indicative characters, compound ideographic characters and radical phonetic characters according to their structures. Each character is described with the property of the character and clarified by an illustrative sentence. Zhifang Ren is a professor of English at China Medical University. He has previously written a book titled A Handbook of Analyzing English Vocabulary published in China. This is his second literary endeavor involving ten years of painstaking research and compilation.
