This title was first published in 2003. This text offers an analysis of the linkages between trade policy and competition policy. It is a case study-based book that explores the conflicts and complementarities between these policy domains given different industry conditions and market structures. The essential argument is that as the complexity of markets and industry structures increases, the relationships between trade and competition grow in complexity also. The book attempts to classify these different industry conditions into four categories: natural resource, complex manufacturing, R+D intensive and internationally traded service industries. The book offers specific case studies in natural resource and complex manufacturing sectors. Given the proposals at the World Trade Organization concerning the internationalisation of antitrust policies, this text should serve as a useful guide to both academics and policymakers alike.

Most people fight over something or other and language is usually at the very center of the conflict. Often the way we use language is the cause of the battle. There are many areas in which fighting about language can be observed but civil law cases offer the most fertile examples of this warfare over words. What did the contract actually say? Was there deception in the advertising? Was the warning label clear and effective? Did the company evidence race or age discrimination against employees or customers? Was one company's name too similar to that of another company? Did the corporation plagiarize the work of another? Did it fraudulently represent what its

work? This book is about the ways linguistic analysis describes, exposes, and aids disputes in 18 civil cases where language framed the battleground. Roger Shuy, a well-known forensic linguist and consultant, shows how the skills of linguistic analysis can help resolve disputed meanings, while also showing how civil cases can prove to be fertile ground for linguistic scholarship. He does this by collecting and analyzing cases involving contracts, trademark disputes, advertisements, product liability, copyright infringement, discrimination, trademark disputes, and fraud controversies. In each case he employs all the tools of formal linguistics to show how it can be as helpful as other physical sciences in resolving legal disagreements. The work will be of interest primarily to linguists -- sociolinguists, forensic linguists, and scholars and students of law and society -- as well as lawyers and law students.

The U.S. economy is the envy of the world, and the key to its success is technological innovation. In this fascinating and in-depth account reported from three continents, Robert Buderer turns the spotlight on corporate research and the management of innovation that is helping drive the economy's robust growth. Here are firsthand communiqués from inside the labs of a reborn IBM, resurgent GE and Lucent, research upstarts Intel and Microsoft, and other leading American firms -- as well as top European and Japanese competitors. It was only a few years ago that competitiveness experts -- U.S. well-wishers and naysayers alike -- concluded that America had lost its business and technological edge. The nation's companies, they asserted, couldn't match the development and manufacturing efficiency of overseas rivals. Yet now the nation is humming along, riding an unparalleled wave of innovation. Buderer

tells us this turnaround has come on many fronts -- in marketing, sales, manufacturing, and the creation of start-up companies. But *Engines of Tomorrow* deals with a central element that has gone largely unexamined: corporate research. It's the research process that provides the technologies that spur growth. Research is behind the renaissance of IBM, the stunning growth of Lucent, and much of the steamrolling American recovery. Focusing on the fast-moving communications-computer-electronics sector, Buderer profiles some of the world's leading thinkers on innovation, talks with top inventors, and describes the exciting technologies coming down the pike -- from information appliances to electronic security and quantum computing. In the process, he examines the vital strategic issues in which central labs play a determining role, including: How IBM's eight labs around the world figure in Lou Gerstner's plans to achieve consistent double-digit growth -- and to join GE as a \$100 billion concern. Why Xerox's famed Palo Alto Research Center is vying to resuscitate its company's lagging fortunes by sending anthropologists into the field to study the hidden ways people really work. What Hewlett-Packard will do without its original instrument business, recently spun off as Agilent Technologies. The business was central to HP Labs' MC2 philosophy of merging research expertise in measurement, computation, and communication -- and its departure removed a lot that was unique about HP. How the November 1999 federal court finding that Microsoft operates a monopoly hinders the Seattle giant's acquisition plans and makes it increasingly vital for nine-year-old Microsoft Research to lead the way in innovating from within. Could this be the next great lab for the twenty-first century? With authority and undaunted optimism about the underlying vitality of the research process, Buderer discusses these issues and reveals the future of some of the world's best and most powerful companies.
