Despite the fact that vast engineering networks are the foundations of modern society, the services that technology companies provide over them have been a relatively neglected area of study. As a result, marketing in some technology businesses has been depressingly tactical and inconsistent. Marketers with little experience, and even less professional training, run around presenting PowerPoint decks to each other, chasing after the latest fad and throwing erratic, changing activities at the market each quarter. Many work on the unchallenged assumption that

markets are fast changing and that customers only want the lowest prices. Yet this industry has liberated human imagination in the internet and convinced the world that they must have a PC and a mobile phone. Now, as a result of profound, relentless, global forces, some of the leading firms and greatest minds in it are at last turning their attention to service. With the advent of 'cloud computing' and radical changes in the engineering of some utilities, the marketing of services that are based on a technical infrastructure is about to become as important and sophisticated as in, say, consumer products. This book explores their story and experience. "I really enjoyed the

book *From Products to Services* by Mr Laurie Young. Encouraged by it, Haier accelerated its changeover from a traditional product-driven to a more customer-centric company. This new book *Marketing Technology as a Service* is another major contribution to technology companies for the cultivation of service needs worldwide.” – Mr Zhang Ruimin, CEO and Chairman, Haier Group, Beijing “Young and Burgess describe a shift in mindset and pragmatic techniques that are quite doable – Rae Sedel, MD, Global Technology Practice, Russell Reynolds Associates. “This book provides practical and insightful advice on how to use services to turn technology into

value add solutions for real people – Rudy Provoost, CEO, Philips Lighting “Business leaders in India have been remarkably successful at offering technology based services like outsourcing across the world. Currently worth \$60 billion, they intend to reach \$300 billion by 2020. To succeed, the Indian business community must offer new value propositions and adapt to emerging trends, like cloud computing. Burgess and Young have put together the first comprehensive and practical guide for business leaders to meet their challenges of exponential growth.” – Dr Mukesh Aghi, Chairman and CEO, Steria (India)

This monograph presents a complete review of all successful techniques that have been used to construct and maintain snow roads, trails and aircraft landing fields. The snow properties that must be considered prior to the construction process are identified, and the kinds of apparatus available for the measure of the properties are reviewed and assessed. A discussion of construction techniques is presented, which includes the types of snow pavements, the classification of roads by use, the classification of surface and subsurface

strength, the considerations impacting on site selection, the various kinds of equipment that have been developed to construct and maintain the roads, and the additives that have been used to construct roads with sufficient bearing strength. The design criteria that have been established are cited.

This accessible text looks at the range of soft skills sought after by employers and provides a practical guide to developing and effectively demonstrating these skills. Soft skills -- including communication, customer service, teamwork, problem solving, and

personal management -- represent a major component of any worker's professional identity. This book analyzes major soft skills, including both inward-facing soft skills (how workers manage themselves to effectively perform their work) and outward-facing skills (how workers effectively interact with others and in groups). It explores how these skills are rooted in fundamental areas of liberal arts including interpersonal communication, psychology, and ethics. It provides an active learning pedagogy, including creative exercises and case studies through which students can assess their understanding of underlying concepts and their application in real-world

situations. The book can be used as a supplement for communication, business, and career-oriented courses, and it will be of interest to individual students and junior professionals as well as career counselors, postsecondary instructors across the curriculum, and professionals in human resources and learning and development.
