Stud Prentice Hall
Originally published in 1996, *Stud*: Architectures of Masculinity is an interdisciplinary exploration of the active role architecture plays in the construction of male identity. Architects, artists, and theorists investigate how sexuality is constituted through the organization of materials, objects, and human subjects in actual space. This collection of essays and visual projects critically analyzes the spaces that we habitually take for granted but that quietly participates in the manufacturing of "maleness." Employing a variety of critical perspectives (feminism, "queer theory," deconstruction, and psychoanalysis), *Stud*'s contributors reveal how masculinity, always an unstable construct, is coded in our environment. *Stud* also addresses the relationship between architecture and gay male sexuality, illustrating the resourceful ways that gay men have appropriated and reordered everyday public domains, from streets to sex clubs, in the formation of gay social space.

Scalable Innovation

Design is part of ordinary, everyday life, to be found in every room in every building in the world. While we may tend to think of design in terms of highly desirable objects, this book encourages us to think about design as ubiquitous (from plumbing to television) and as an agent of social change (from telephones to weapon systems). The Design Culture Reader brings together an international array of writers whose work is of central importance for thinking about design culture in the past, present and future. Essays from philosophers, media and cultural theorists, historians of design, anthropologists, cultural historians, artists and literary critics all demonstrate

the enormous potential of design studies for understanding the modern world. Organised in thematic sections, The Design Culture Reader explores the social role of design by looking at the impact it has in a number of areas - especially globalisation, ecology, and the changing experiences of modern life. Particular essays focus on topics such as design and the senses, design and war and design and technology, while the editor's introduction to the collection provides a compelling argument for situating design studies at the very forefront of contemporary thought.

LIFE

Innovation is a primary source of economic growth, and yet only one idea out of 3,000 becomes a successful product or service.

Scalable Innovation: A Guide for Inventors, Entrepreneurs, and IP Professionals introduces a model for the innovation process, helping innovators to understand the nature and timing of opportunities and risks on the path to success. The authors apply systems thinking

to discover real-life challenges, and provide tools for turning these challenges into opportunities for practical, scalable innovation. The book is organized into four sections: Prologue exposes key barriers to creativity and innovation. It provides telling examples of how years in school and at work make us accept common wisdoms that are likely to hurt our chances to create or take advantage of breakthrough innovations. Section I introduces a system model for understanding technology and solving problems. It shows how to connect the model with real-life solutions, including their reflection in patents. Section II introduces tools for thinking outside the box, considers the role of luck in success of inventions, and presents tools for flexible thinking and imagination development. Section III discusses system dynamics, including how the elements of systems evolve, creating space for invention and scalable innovation. The authors illustrate this with case studies from various industries and technology areas. They analyze several landmark innovations in detail, revealing surprising and essential elements common to all of them. This book presents simple principles that form the foundation of successful innovation, enabling practitioners to anticipate and expedite the creation of value through the guided innovation process. It outlines the most common barriers in reasoning and false beliefs about innovation that impede practitioners from seeing problems in a new light and offers specific ways of dealing with these barriers. It also provides specific tools for quickly identifying essential present

and missing elements of systems underpinning high-value problems and their proposed solutions, resulting in an accelerated innovation development and evaluation cycle.
