Innovation is a primary source of economic growth, and yet only one idea out of 3,000 becomes a successful product or service. Scalable Innovation: A Guide for Inventors, Entrepreneurs, and IP Professionals introduces a model for the innovation

process, helping innovators to understand the nature and timing of opportunities and risks on the path to success. The authors apply systems thinking to discover real-life challenges, and provide tools for turning these challenges into opportunities for practical, scalable innovation. The book is organized into four sections: Prologue exposes key barriers to creativity and innovation. It provides telling examples of how years in school and at work make us accept common wisdoms that are likely to hurt

---

our chances to create or take advantage of breakthrough innovations. Section I introduces a system model for understanding technology and solving problems. It shows how to connect the model with real-life solutions, including their reflection in patents. Section II introduces tools for thinking outside the box, considers the role of luck in success of inventions, and presents tools for flexible thinking and imagination development. Section III discusses system dynamics, including how the elements of systems evolve, creating space for invention and scalable innovation. The authors illustrate this with case studies from various industries and technology areas. They analyze several landmark innovations in detail, revealing surprising and essential elements common to all of them. This book presents simple principles that form the foundation of successful innovation, enabling practitioners to anticipate and expedite the creation of value through the guided innovation process. It outlines the most common barriers in reasoning and false beliefs about innovation that impede practitioners from seeing problems in a new light and offers specific ways of dealing with these barriers. It also provides specific tools for quickly identifying essential present and missing elements of systems underpinning high-value problems and their proposed solutions, resulting in an accelerated innovation development and evaluation cycle.

New York magazine was born in  
1968 after a run as an insert of the  
New York Herald Tribune and  
quickly made a place for itself as  
the trusted resource for readers  
across the country. With award-  
winning writing and photography  
covering everything from politics  
and food to theater and fashion,  
the magazine's consistent mission  
has been to reflect back to its  
audience the energy and

excitement of the city itself, while  
celebrating New York as both a  
place and an idea.

Design is part of ordinary,  
everyday life, to be found in  
every room in every building in  
the world. While we may tend to  
think of design in terms of  
highly desirable objects, this  
book encourages us to think  
about design as ubiquitous  
(from plumbing to television)  
and as an agent of social change  
(from telephones to weapon  
systems). The Design Culture  
Reader brings together an  
international array of writers

whose work is of central  
importance for thinking about  
design culture in the past, present  
and future. Essays from  
philosophers, media and cultural  
theorists, historians of design,  
anthropologists, cultural  
historians, artists and literary  
critics all demonstrate the  
enormous potential of design  
studies for understanding the  
modern world. Organised in  
thematic sections, The Design  
Culture Reader explores the  
social role of design by looking at  
the impact it has in a number of  
areas - especially globalisation,  
ecology, and the changing  
experiences of modern life.

Particular essays focus on topics such as design and the senses, design and war and design and technology, while the editor's introduction to the collection provides a compelling argument for situating design studies at the very forefront of contemporary thought.

Originally published in 1996, Stud: Architectures of Masculinity is an interdisciplinary exploration of the active role architecture plays in the construction of male identity. Architects, artists, and theorists investigate how sexuality is constituted through the organization of materials, objects, and human subjects in actual space. This collection of essays and

---

visual projects critically analyzes the spaces that we habitually take for granted but that quietly participates in the manufacturing of "maleness." Employing a variety of critical perspectives (feminism, "queer theory," deconstruction, and psychoanalysis), Stud's contributors reveal how masculinity, always an unstable construct, is coded in our environment. Stud also addresses the relationship between architecture and gay male sexuality, illustrating the resourceful ways that gay men have appropriated and reordered everyday public domains, from streets to sex clubs, in the formation of gay social space.
