This volume contains the proceedings of the Ninth Meeting of the "International Study Group for Tryptophan Research" (ISTRY), held at the University of Hamburg, Germany, from October 10 to 14, 1998. At this meeting the recent developments in the field of tryptophan research were presented by leading researchers from all over the world in 81 oral and 48 poster contributions. Research on tryptophan and its derivatives provides an inexhaustible subject. At the conference we tried to compose a multifaceted picture of the recent investigations through contributions from the major disciplines involved. Thus, we tried to strike a balance between basic

research topics and clinical, nutritional or industrial applications. We offered workshops on tryptophan (in sleep and mood), melatonin, IDO-activation and the eosinophilia-myalgia syndrome (EMS) as a platform for intensive discussion for the participants. In these proceedings many contributions are multidisciplinary and have practical or theoretical implications for different research fields. Hence, we have organized this volume in nine main chapters according to basic disciplines and subjects. We are aware that this classification is artificial, but we hope that it is the best compromise for contributors and readers.

Biotechnology and  
Bioengineering: Bioprocesses,  
Bioreactors and Controls  
provides extensive coverage of  
new developments, state-of-the-  
art technologies, and potential  
future trends, reviewing  
industrial biotechnology and  
bioengineering practices that  
facilitate and enhance the  
transition of processes from  
lab to plant scale, which is  
becoming increasingly important  
as such transitions continue to  
grow in frequency. Focusing on  
industrial bioprocesses,  
bioreactors for bioprocesses,

and controls for bioprocesses,  
this title reviews industrial  
practice to identify bottlenecks  
and propose solutions,  
highlighting that the optimal  
control of a bioprocess involves  
not only maximization of product  
yield, but also taking into  
account parameters such as  
quality assurance and  
environmental aspects. -  
Describes industrial

Detection of Pathogens in Water Using Micro and Nano-Technology aims to promote the uptake of innovative micro and nano-technological approaches towards the

---

development of an integrated, cost-effective nano-biological sensor useful for security and environmental assays. The book describes the concerted efforts of a large European research project and the achievements of additional leading research groups. The reported knowledge and expertise should support in the innovation and integration of often separated unitary processes. Sampling, cell lysis and DNA/RNA extraction, DNA hybridisation detection micro- and nanosensors, microfluidics, together also with computational modelling and risk assessment can be integrated in the framework of the current and evolving European regulations and needs. The development and uptake of molecular methods is revolutionizing the field of waterborne pathogens detection,

commonly performed with time-consuming cultural methods. The molecular detection methods are enabling the development of integrated instruments based on biosensor that will ultimately automate the full pathway of the microbiological analysis of water. Basic Marketing 16e builds on the foundation pillars of previous editions – the four Ps framework, managerial orientation, and strategy planning focus. 16e builds upon its pioneering beginnings that introduced the “ four Ps ” to the introductory marketing course. The unifying focus of Basic Marketing has always been on how to make the marketing decisions that a manager must make in deciding what customers to focus on and how best to meet their needs. Over many editions there has been constant change in

marketing management and the marketing environment. Some of the changes have been dramatic, and others have been subtle. As a result, the authors have made ongoing changes to the text to reflect marketing ’ s best practices and ideas. Throughout all of these changes, Basic Marketing and the supporting materials that accompany it have been more widely used than any other teaching materials for introductory marketing. Consistent with our belief in continuous quality improvement, this edition has been critically revised, updated, and rewritten to reflect new concepts, new examples, and recent “ best practices. ” This edition extends the strategy planning approach, integrating concepts tightly with the marketing strategy planning model.

Annotation Injection moulding is one of the most commonly used processing technologies for plastics materials. Proper machine set up, part and mould design, and material selection can lead to high quality production. This review outlines common factors to check when preparing to injection mould components, so that costly mistakes can be avoided. This review examines the different types of surface defects that can be identified in plastics parts and looks at ways of solving these problems. Useful flow charts to illustrate possible ways forward are included. Case studies and a large b257 of figures make this a very useful report.

It is a pleasure to contribute the foreword to  
Introduction to Cell and Tissue Culture: Theory and  
Techniques by Mather and Roberts. Despite the  
occasional appearance of thoughtful works devoted  
to elementary or advanced cell culture methodology,  
a place remains for a comprehensive and definitive  
volume that can be used to advantage by both the  
novice and the expert in the field. In this book,  
Mather and Roberts present the relevant method  
ology within a conceptual framework of cell biology,  
genetics, nutrition, endocrinology, and physiology  
that renders technical cell culture information in a  
comprehensive, logical format. This allows topics to  
be presented with an emphasis on troubleshooting  
problems from a basis of understanding the  
underlying theory. The material is presented in a way  
that is adaptable to student use in formal courses; it  
also should be functional when used on a daily basis  
by professional cell culturists in academia and  
industry. The volume includes references to relevant

Internet sites and other useful sources of information.  
In addition to the fundamentals, attention is also given  
to modern applications and approaches to cell culture  
derivation, medium formulation, culture scale-up,  
and biotechnology, presented by scientists who are  
pioneers in these areas. With this volume, it should be  
possible to establish and maintain a cell culture  
laboratory devoted to any of the many disciplines to  
which cell culture methodology is applicable.

biology, biochemistry and molecular biology, and introduces laboratory techniques specific to the technologies addressed in the book; it addresses specific biotechnologies at both the theoretical and application levels. Biotechnology is a field that encompasses both basic science and engineering. There are currently few, if any, biotechnology textbooks that adequately address both areas. Engineering books are equation-heavy and are written in a manner that is very difficult for the non-engineer to understand. Numerous other attempts to present biotechnology are written in a flowery manner with little substance. The author holds one of the first PhDs granted in both biosciences and bioengineering. He is more than an author enamoured with the wow-factor associated with biotechnology; he is a practicing researcher in gene therapy, cell/tissue engineering, and other areas and has been involved with emerging technologies for over a decade. Having made the assertion that there is no acceptable text for teaching a course to introduce biotechnology to both scientists and engineers, the author committed himself to resolving the issue by writing his own. - The book is of interest to a wide audience because it includes the necessary background for understanding how a technology works. - Engineering principles are addressed, but in such a way that an instructor can skip the sections without hurting course content - The author has been involved with many biotechnologies through his own direct research experiences. The text is more than a

---

compendium of information - it is an integrated work written by an author who has experienced first-hand the nuances associated with many of the major biotechnologies of general interest today.
