The complete history of the world's foremost locomotive builders. With roots stretching back to the turn of the twentieth century, General Electric and Electro-Motive have designed some of the most iconic locomotives in the history of North American railroading. Now, for the first time, acclaimed rail author Brian Solomon's landmark historical accounts of these manufacturers' North American machines (GE Locomotives, 2003, and EMD Locomotives, 2006) are available in a single photo-packed volume. In GE and EMD Locomotives: The Illustrated History, nearly 400 rare photographs (more than 300 of them in color) are accompanied by thorough histories of the two manufacturers, beginning with their

earliest efforts in the 1890s and 1930s, respectively. Solomon brings the story up to date with afterwords detailing such recent developments as GE's revolutionary Evolution locomotives and EMD's SD70ACe and SD70M-2. From General Electric's electrical legends - the Pennsylvania Railroad's E44s, Amtrak's E60s, and Milwaukee Road's "Little Joes" - to EMD's mid-century F units, workhorse GP and SD locomotives, and Dash series, all the way through to the rivals' most cutting-edge modern "green" designs, GE and EMD Locomotives: The Illustrated History leaves nothing unexamined in the important histories of these industrial giants and the competition that continues to drive them forward.

It's no secret that alternative teams are increasingly recognized as a highly effective means to improve quality and operational efficiency, decentralize authority, and motivate workers at every level of an organization. Less well understood, and rarely touched upon in the literature, is the fact that cross-functional teams are highly versatile strategic resources and key elements in the design and execution of strategic management initiatives. In this book, noted author, scholar, and authority on team management, David Cleland, demonstrates that alternative, cross-functional teams are both critical to the management of change within an organization and building blocks in the design and execution of product/service and process strategy. He explores specific aspects of strategic team management and provides clear, concise recommendations on the design and

implementation of team-based strategy.

Cracking the Code of Possibilities in Business Prentice Hall
Worlds collide in this true story of weather control in the Cold War era and the making of Kurt Vonnegut In the mid-1950s, Kurt Vonnegut takes a job in the PR department at General Electric in Schenectady, where his older brother, Bernard, is a leading scientist in its research lab--or "House of Magic." Kurt has ambitions as a novelist, and Bernard is working on a series of cutting-edge weather-control experiments meant to make deserts bloom and farmers flourish. While Kurt writes zippy press releases, Bernard builds silver-iodide generators and attacks clouds with dry ice. His experiments attract the attention of the government; weather proved a decisive factor in World War II, and if the military can control the clouds, fog, and snow, they can fly more bombing missions. Maybe weather will even be the "New Super Weapon." But when the army takes charge of his cloud-seeding project (dubbed Project Cirrus), Bernard begins to have misgivings about the harmful uses of his inventions, not to mention the evidence that they are causing alarming changes in the atmosphere. In a fascinating cultural history, Ginger Strand chronicles the intersection of these brothers' lives at a time when the possibilities of science seemed infinite. As the Cold War looms, Bernard's struggle for integrity plays out in Kurt's evolving writing style. The Brothers Vonnegut reveals how science's ability to influence the natural world also influenced one of our most inventive novelists.

The author focuses on the marketing perspective of the topic and illustrates how women's roles in society have shifted during

the past century. Among the key issues explored is a peculiar dichotomy of American advertising that served as a conservative reflection of society and, at the same time, became an underlying force of progressive social change. The study shows how advertisers of housekeeping products perpetuated the Happy Homemaker stereotype while tobacco and cosmetics marketers dismantled women's stereotypes to create an entirely new type of consumer.
