Lengthening the Day Michelle Ford

Recalling the great muckrakers of the past, an outraged team of America's best-selling writers unite to confront the disasters of wrongful convictions. Wrongful convictions, long regarded as statistical anomalies in an otherwise sound justice system, now appear with frightening regularity. But few people understand just how or why they happen and, more important, the immeasurable consequences that often haunt the lucky few who are acquitted, years after they are proven innocent. Now, in this groundbreaking anthology, fourteen exonerated inmates narrate their stories to a roster of high-profile mystery and thriller writers—including Lee Child, Sara Paretsky, Laurie R. King, Jan Burke and S. J. Rozan—while another exoneree's case is explored in a previously unpublished essay by legendary playwright Arthur Miller. An astonishing and unique collaboration, these testimonies bear witness to the incredible stories of innocent men and women who were convicted of serious crimes and cast into the maw of a vast and deeply flawed American criminal justice system before eventually, and miraculously, being exonerated. Introduced by best-selling authors Scott Turow and Barry Scheck, these master storytellers capture the tragedy of wrongful convictions as never before and challenge readers to confront the limitations and harsh realities

of the American criminal justice system. Lee Child tells of Kirk Bloodsworth, who obsessively read about the burgeoning field of DNA testing, cautiously hoping that it held the key to his acquittal—until he eventually became the first person to be exonerated from death row based on DNA evidence. Judge John Sheldon and author Gayle Lynds team up to share Audrey Edmunds's experience raising her children long distance from her prison cell. And exoneree Gloria Killian recounts to S. J. Rozan her journey from that fateful "knock on the door" and the initial shock of accusation to the scars she carries today. Together, the powerful stories collected within the Anatomy of Innocence detail every aspect of the experience of wrongful conviction, as well as the remarkable depths of endurance sustained by each exoneree who never lost hope.

This book will help readers learn the basic skills needed to study microfossils especially those without a formal background in paleontology. It details key principles, explains how to identify different groups of microfossils, and provides insight into their potential applications in solving geologic problems. Basic principles are addressed with examples that explore the strengths and limitations of microfossils and their geological records. This overview provides an understanding of taphonomy and quality of the fossil records, biomineralization and biogeochemistry, taxonomy, concepts of species, and basic concepts of ecology. Readers learn about the major groups of microfossils, including their morphology, ecology, and geologic history. Coverage includes: foraminifera, ostracoda, coccolithophores, pteropods, radiolaria, diatoms, silicoflagellates, conodonts, dinoflagellates, acritarch, and spores and pollens. In this coverage, marine microfossils, and particularly foraminifera, are discussed in more detail compared with the other groups as they continue to play a major role in most scientific investigations. Among the various tracers of earth history, microfossils provide the

most diverse kinds of information to earth scientists. This richly illustrated volume will help students and professionals understand microfossils, and provide insight on how to work with them to better understand evolution of life, and age and the paleoenvironment of sedimentary strata.

People have always wanted light, and until the nineteenth century the only useful source of light was flame. Electricity brought clean light without flame, and sometimes even without much heat. This book is about the ways in which people have made light to lengthen their day. It explains how oil lamps, candles, and gas lights work and, drawing on writings of the time, shows how the available lights affected daily life. The principles of all the main types of electric lights now available are described. Alongside this technical history, quotations from Aristophanes to Jane Austen, from James Boswell to Kenneth Grahame, illustrate the social importance of lighting.

Few books in publishing history created such excitement in advance of publication as *My Life with Jacqueline Kennedy*. A small portion of the book, appearing in serial form, produced a wave of press speculation throughout the world and whetted the anticipation of readers everywhere for the whole story. And only by reading the complete book can the complexities of the former Jacqueline Kennedy's personality and life be fully understood. This book reveals Jacqueline Kennedy as a real person -- as a wife, as a mother, as a seeker of perfection in art and life. And, it describes her brilliant refurbishing of The White House, where Mary worked closely with her in the Family Quarters. For the light it sheds on crucial years in American history and on Jacqueline Kennedy, this book is unique. It takes us back to Camelot and shows the real woman beneath the goddess-figure the world's idolatry made her. Nearly a half-century has passed since the original publication of *My Life with Jacqueline Kennedy* in 1969; therefore, its reissuance at this time is deemed appropriate for the benefit of all future generations in their overall understanding of this historical, interesting Kennedy Era.

The aims in drying out a building are to bring it to a fit state to receive internal finishes and decoration and to avoid damage or disfigurement of work already done. This digest describes some ways of drying out and also methods of testing the condition of walls, floors and joinery. Although economic considerations will usually call for early completion and, hence, rapid drying, excessively fast drying will cause troubles.

a disused power station is converted into a cultural centre, an old barn is made into a residential house. All around us we encounter buildings whose original purpose has rendered them obsolete, and which now offer space for new uses. The construction and building requirements confronting the architect are as varied and individual as the buildings themselves. This publication examines a wide range of realized examples, highlighting successful and innovative solutions, from the rehabilitation of preserved monuments to the renovation or renewal of existing buildings, from the reuse of a gothic monastery or the former industrial buildings of Fiat Lingotto to the renovation of structures made of pre-cast concrete panels. Introductory essays by specialist authors examine the economical, technical, historical aspects of the topic, and the projects presented are documented fully with illustrations, plans and details which have been specially produced by the editorial department of **DETAIL**. *Building in Existing Fabric*
