Joining the ranks of The Life-Changing Magic of Not Giving a F\*ck, The Subtle Art of Not Giving a F\*ck, You Are a Badass\*, and F\*ck Feelings comes this refreshing, BS-free, self-empowerment guide that offers an honest, no-nonsense, tough-love approach to help you move past self-imposed limitations. Are you tired of feeling fu\*ked up? If you are, Gary John Bishop has the answer. In this straightforward

handbook, he gives you the tools and advice you need to demolish the slag weighing you down and become the truly unfu\*ked version of yourself. "Wake up to the miracle you are," he directs. "Here's what you've forgotten: You're a fu\*king miracle of being." It isn't other people that are standing in your way, it isn't even your circumstances that are blocking your ability to thrive, it's yourself and the negative self-talk you keep telling yourself. In Unfu\*k Yourself, Bishop leads you through a series of seven assertions: I am willing. I am wired to win. I got this. I embrace the uncertainty. I am not my thoughts; I am what I do. I am relentless. I expect nothing and accept everything. Lead the life

Featuring everything from sports stadiums to shopping malls, hundreds of new cities in China stand empty, with hundreds more set to be built by 2030. Between now and then, the country's urban population will leap to over one billion, as the central government kicks its urbanization initiative into overdrive. In the process,

traditional social structures are being torn apart, and a rootless, semi-displaced, consumption orientated culture rapidly taking their place. Ghost Cities of China is an enthralling dialogue driven, on-location search for an understanding of China's new cities and the reasons why many currently stand empty.

Sacred sites offer believers the possibility of communing with the divine and achieving deeper insight into their faith. Yet their spiritual and cultural importance can lead to competition as religious groups seek to exclude rivals from practicing potentially sacrilegious rituals in the hallowed space and wish to assert their own claims. Holy places thus create the potential for military, theological, or political clashes, not only between competing religious groups but also between religious groups and secular actors. In War on Sacred Grounds,

Ron E. Hassner investigates the causes and properties of conflicts over sites that are both venerated and contested; he also proposes potential means for managing these disputes. Hassner illustrates a complex and poorly understood political dilemma with accounts of the failures to reach settlement at Temple Mount/Haram el-Sharif, leading to the clashes of 2000, and the competing claims of Hindus and Muslims at Ayodhya, which resulted in the destruction of the mosque there in 1992. He also addresses more successful compromises in Jerusalem in 1967 and Mecca in 1979. Sacred sites, he contends, are particularly prone to conflict because they provide valuable

---

resources for both religious and political actors yet cannot be divided. The management of conflicts over sacred sites requires cooperation, Hassner suggests, between political leaders interested in promoting conflict resolution and religious leaders who can shape the meaning and value that sacred places hold for believers.

Because a reconfiguration of sacred space requires a confluence of political will, religious authority, and a window of opportunity, it is relatively rare. Drawing on the study of religion and the study of politics in equal measure, Hassner's account offers insight into the often-violent dynamics that come into play at the

places where religion and politics collide.

The message passing paradigm is considered the most effective way to develop efficient parallel applications. PVM (Parallel Virtual Machine) and MPI (Message Passing Interface) are the most frequently used tools for programming message passing applications. This volume includes the selected contributions presented at the 10th European PVM/MPI Users' Group Meeting (Euro PVM/MPI 2003), which was held in Venice, Italy,

September 29 – October 2, 2003. The conference was jointly organized by the Department of Computer Science of the Ca' Foscari University of Venice, Italy and the Information Science and Technologies Institute of the National Research Council (ISTI-CNR), Pisa, Italy. The conference was previously held in Linz, Austria (2002), Santorini, Greece (2001), Balatonfüred, Hungary (2000), Barcelona, Spain (1999), Liverpool, UK (1998), and Krakow, Poland (1997). The first three conferences were devoted to PVM and were held in Munich, Germany (1996), Lyon, France

---

(1995), and Rome, Italy (1994). The conference has become a forum for users and developers of PVM, MPI, and other message passing environments. Interactions between these groups has proved to be very useful for developing new ideas in parallel computing, and for applying some of those already existent to new practical fields. The main topics of the meeting were evaluation and performance of PVM and MPI, extensions, implementations and improvements of PVM and MPI, parallel algorithms using the message passing paradigm, and parallel applications in science and engineering. In addition, the topics of the conference were extended to include Grid computing, in order to reflect the importance of this area for the hi- performance computing community.

sustainable woodland management, including the cycles of nature, seasonal tasks, wild food gathering, wine making, mouthwatering and useful recipes, coppice crafts, round-pole timber-frame eco-building (pioneered by Ben), nature conservation, species diversity, tree profiles, and the use of horses for woodland work. This is a profound book that is both practical and poetic. It describes a way of life that is economically and ecologically viable and sets a new standard for managing our woods in a low-impact, sustainable way. As such, it holds some of the fundamental keys to how we can achieve a lower-carbon society.

has the potential to evolve the paradigm of end user computing, from the interactive text and graphics model that has developed since the 1950s, into one more compatible with the digital electronic world of the next century.

Decreasing hardware costs, a relatively inexpensive storage capacity and a rapid increasing computing power and network bandwidth, all major requirements of multimedia applications, have contributed to the recent tremendous growth in production and use of multimedia contents. Interactive Multimedia Systems addresses these innovative technologies and how they can positively impact a variety of areas.

The text treats the major media--painting, sculpture, drawings, prints, and architecture--as well as gardens, furniture, tapestries, costume, jewelry, and ceramics, all in terms of their original function and patronage and with emphasis on the social, political and cultural context. Organized by country and medium, the book contains biographies of the leading creative figures of the time, from Caravaggio and Rembrandt to Watteau and Hogarth. Significantly, Professor Neuman offers the fullest account to date of women artists and the representation of women and families in art. Additionally, drawing from recent scholarship, the text explores such fields as Spanish polychrome sculpture and Viceregal American painting. Baroque and Rococo Art and Architecture reviews traditional and recent strategies for interpreting artworks. It also traces the dissemination of visual ideas through prints and drawings--the forerunners of today's art reproductions and digital media. In special

---

sections the text raises questions regarding the nature of perception and how artists transfer optical data to the canvas. Artists' techniques, from painting and printmaking to sculpting in marble and casting in bronze, are explained. Analysis of the institutions of art, such as the royal academies, apprenticeship systems, and artists' exhibition rooms, complements an examination of collecting at all levels of society. The book is exceptional in considering issues related to authenticity and the relative value of artworks based on attribution. The illustrations comprise a visual resource of unprecedented quality, with some 450 images reproduced in full color and in a large format that ensures high detail and emphasizes recent conservation efforts. Finally, an extensive glossary introduces

seventeenth- and eighteenth-century art terms. Note: MySearchLab does not come automatically packaged with this text.
