Encyclopedic and authoritative, Weedon 's Skin Pathology has earned outstanding reviews and accolades from practicing and trainee dermatopathologists, general pathologists, and dermatologists worldwide. The 5th Edition continues the tradition of excellence, helping you accurately and efficiently sign out challenging skin cases in everyday practice, while also keeping you up to date with recent advances in the field. This single-authored text provides comprehensive coverage of the full spectrum of dermatopathological entities, both inflammatory and neoplastic, highlighted by more than 1,200 large-sized, high-quality illustrations. Helps you arrive at the most accurate diagnoses possible by demonstrating what is seen through the microscope and identifying the characteristic features of the lesion – for established disorders, unusual and rare disease entities, and incompletely defined entities.

Includes updated and expanded information on molecular diagnostics, including FISH (fluorescence in situ hybridization) techniques, plus new developments in molecular biology and molecular techniques, targeted-personalized medicine, and immunohistochemistry. Brings you fully up to date with carefully reviewed and streamlined introductory and basic science information and information on new entities since the previous edition. Presents even more key information in quick-reference formats such as tables and boxes that organize diseases into groups, synthesize diagnostic criteria, and list differential diagnoses. Identifies both important articles and more rare and unusual reports with remarkably authoritative, comprehensive, current, and relevant reference lists (over 35,000) for each entity.

We aim at testing knowledge acquisition and application, albeit data analysis is tested in fewer instances. The questions are presented in Calibri (body) theme font to provide the best readability. The questions` stems are short, bold, and typed in

size 14 font. Each question has four options. It is hard for a test taker who doesn` t know the answer to guesstimate. We have used plausible distractors and avoided double negatives. Furthermore, we have used the finished and unfinished statement styles and avoided complex structures of questions. We have implemented the (how common is ...) and (what is the likelihood that ...) styles of questions as we believe that the reader`s intuition and clinical sense last longer, in mind, than figures do.
