This is a print on demand edition of a hard

to find publication. Explores whether
sufficient data exists to examine the
temporal and spatial relationships that
existed in terrorist group planning, and if
so, could patterns of preparatory conduct
be identified? About one-half of the
terrorists resided, planned, and prepared
for terrorism relatively close to their
eventual target. The terrorist groups
existed for 1,205 days from the first
planning meeting to the date of the
actual/planned terrorist incident. The
planning process for specific acts began
2-3 months prior to the terrorist incident.
This study examined selected terrorist
groups/incidents in the U.S. from
1980-2002. It provides for the potential to
identify patterns of conduct that might
lead to intervention prior to the
commission of the actual terrorist
incidents. Illustrations.

With many scholars and analysts
questioning the relevance of deterrence
as a valid strategic concept, this volume
moves beyond Cold War nuclear
deterrence to show the many ways in
which deterrence is applicable to
contemporary security. It examines the
possibility of applying deterrence theory
and practice to space, to cyberspace, and
against non-state actors. It also examines
the role of nuclear deterrence in the
twenty-first century and reaches
surprising conclusions.
