**World Prehistory: The Basics** tells the compelling story of human prehistory, from our

---

African origins to the spectacular pre-industrial civilizations and cities of the more recent past. Written in a non-technical style by two archaeologists and experienced writers about the past, the story begins with human origins in Africa some 6 million years ago and the spread of our remote ancestors across the Old World. Then we return to Africa and describe the emergence of Homo sapiens (modern humans) about 350,000 years ago, then, much later, their permanent settlement of Europe, Eurasia, Asia, and the Americas. From hunters and foragers, we turn to the origins of farming and animal domestication in different parts of the world after about 11,000 years ago and show how these new economies changed human existence dramatically. Five chapters tell the stories of the great pre-industrial civilizations that emerged after 5,000 years before present in the Old

World and the Americas, their strengths, volatility, and weaknesses. These chapters describe powerful rulers and their ideologies, also the lives of non-elites. The narratives chronicle the rise and fall of civilizations, and the devastating effects of long droughts on many of them. The closing chapter poses a question: Why is world prehistory important in the modern world? What does it tell us about ourselves? Providing a simple, but entertaining and stimulating, account of the prehistoric past from human origins to today from a global perspective, *World Prehistory: The Basics* is the ideal guide to the story of our early human past and its relevance to the modern world.

**The Central Science** Cengage Learning EXPERIMENTS IN GENERAL CHEMISTRY, Sixth Edition, has been designed to stimulate curiosity and insight, and to clearly connect lecture and laboratory concepts and techniques. To accomplish this goal, an extensive effort has been made to develop experiments that maximize a discovery-oriented approach and minimize personal hazards and ecological impact. Like earlier editions, the use of chromates, barium, lead, mercury, and nickel salts has been avoided. The absence of these hazardous substances should minimize disposal problems and costs. This lab manual focuses not only on what happens during chemical reactions, but also helps students understand why chemical reactions occur. The sequence of experiments has been refined to follow topics covered in

---

most general chemistry textbooks. In addition, Murov has included a correlation chart that links the experiments in the manual to the corresponding chapter topics in several Cengage Learning general chemistry titles. Each experiment--framed by pre-and post-laboratory exercises and concluding thought-provoking questions--helps to enhance students' conceptual understanding.
