Laboratory Manual for  
Principles of General Chemistry  
11 Edition covers two semesters  
of a general chemistry laboratory  
program. The material focuses  
on the lab experiences that  
reinforce the concepts that not all  
experimental conclusions are the

techniques, systematically analyzing and interpreting the data, and minimizing inherent variables. As a result of “good” data, a scientific and analytical conclusion is made which may or may not “be right,” but is certainly consistent with the data. Experiments write textbooks, textbooks don’t write experiments. A student’s scientific literacy grows when experiences and observations associated with the scientific method are encountered. Further experimentation provides additional “cause & effect” observations leading to an even better understanding of the experiment. The 11th edition’s experiments are informative and challenging while offering a solid foundation for technique, safety, and experimental procedure. The reporting and analysis of the data and the pre- and post-lab questions focus on the intuitiveness of the experiment. The experiments may accompany any general chemistry textbook and are compiled at the beginning of each curricular unit. An “Additional Notes” column

is included in each experiment’s Report Sheet to provide a space for recording observations and data during the experiment. Continued emphasis on handling data is supported by the “Data Analysis” section.

General Chemistry Laboratory II Kendall/Hunt Publishing Company

This flexible lab manual-appropriate for use with a wide range of general chemistry books-offers a wealth of practical chemistry experiments. It includes pertinent information on rules and safety in the lab.

Preparation of the new edition was guided by specific feedback from users.

Laboratory Manual for Principles of General Chemistry McGraw-Hill Science, Engineering & Mathematics

This laboratory manual is intended for a two-semester general chemistry course. The procedures are written with the goal of simplifying a complicated and often challenging subject for

students by applying concepts to everyday life. This lab manual covers topics such as composition of compounds, reactivity, stoichiometry, limiting reactants, gas laws, calorimetry, periodic trends, molecular structure, spectroscopy, kinetics, equilibria, thermodynamics, electrochemistry, intermolecular forces, solutions, and coordination complexes.
