The General Electric CF34 is a civilian high-bypass turbofan developed by GE Aircraft Engines from its TF34 military engine. The CF34 is used on a number of business and regional jets, including the Bombardier CRJ series, the Embraer E-Jets, and the Chinese ARJ21.

In 2012, there were 5,600 engines in service. *Embraer E-Jet family - Wikipedia*
The jet is powered with General Electric CF34-8E engines of 14,200 pounds (62.28 kN) thrust each. E175 The E175 was first delivered to and entered service with Air Canada in July 2005. The E175 is a slightly stretched version of the E170 and

first entered revenue service in July 2005.

The General Electric J47 turbojet (GE company designation TG-190) was developed by General Electric from its earlier J35. It first flew in May 1948. The J47 was the first axial-flow turbojet approved for commercial use in the United States. It was used in many types of aircraft, and more than 30,000 were manufactured before production ceased in 1956.

The General Electric Passport is a turbofan developed by GE Aviation for large business jets. It was selected in 2010 to

power the Bombardier Global 7500/8000, first ran on June 24, 2013 and first flew in 2015. It was certified in April 2016 and powered the Global 7500 first flight on November 4, 2016, before its 2018 introduction. It produces 14,000 to 20,000 lbf of thrust, a range previously covered by the General Electric CF34. A smaller scaled CFM LEAP, it is a twin-spool axial engine with a

Developed by GE Aircraft Engines during the late 1960s, the original engine comprises a single stage fan, driven by a 4-stage low pressure (LP) turbine, supercharging a 14-stage high pressure (HP) compressor, driven by a 2-stage HP turbine. An annular

combustor is featured. The TF34-GE-400A is rated at 9,275 lbf (41.26 kN) static thrust.
