Telephony Jeffrey Frank Jones

Computers, telecommunications equipment, semiconductors - the products and technologies of the information and communications (IC) industry have transformed our world. Most of these products were initially developed in Western countries, but by the early 1990s some of the world's largest companies in the field were Japanese. This book explains the resurgence of Japan's IC giants, their global status, and their strengths and weaknesses. Empirical scrutiny of their evolution is the author's own theory of the most appropriate method for studying the dynamics of long-term industrial change. While the Japanese motor vehicle and consumer electronics industries have been relatively well analysed, there are no comprehensive up-to-date studies of the Japanese IC industry. This book addresses the questions consequently left unanswered: How were Japanese IC companies able to catch up with their western rivals--and in some cases overtake them? How have Japanese IC companies responded to the post-IBM world of computing? Why do they remain primarily dependent on the Japanese market? Why do they combine competences in computers, semiconductors, and telecommunication equipment, while their US counterparts are far more specialized? What role has been played by the Japanese government and the system of controlled competition in their success? Will Japanese IC companies become increasingly competitive internationally in the future? The author extends the evolutionary approach to the organization of the firm and industry developed by such writers as Schumpeter, Nelson, Winter, and Chandler. He argues that in order to understand the evolution of companies and industries, it is necessary to create a theory of the firm capable of encompassing the development of real firms in the real world in real time. This approach stresses the importance of the beliefs that are constructed in the firm under conditions of 'interpretive ambiguity', which guide the firm's decisions and its reactions to new technologies. Lengthy analyses of NEC and NTT (by far the world's largest company in terms of market value; its future currently under government scrutiny), and of the computing, switching, and optical fibre industries, illustrate these concepts. Based on over 600 personal interviews over eight years with Japanese leaders, this book provides important new material on the past, present, and future of Japanese industry.

Also known as the Walker Report after Paul Walker, FCC Commissioner. The Walker report is a history of AT&T and how they overcharged customers in the 1930's. It is credited with the creation of the FCC. We already have a physical copy of the report *Electrical Review* and *Western Electrician* with which is *Consolidated Electrocraft*
