This report explains the process involved when proceeding from a wetland mitigation design concept to a fill' engineering package that is suitable for public bid and advertisement The information provided is geared toward educating nonengineering professionals engaged in developing wetland mitigation specifications The biological foundations

for the various elements are first presented, followed by full guideline specifications. The vegetation specifications address site preparation, plant material acquisition, transport, handling, and storage of seeds, herbs, and saplings, planting methods for various stock types, different seeding methods, tiring of planting in conjunction with seasonal variations, hydrological considerations such as tidal cycle, water level and rainfall patterns, equipment access and type, protection measures for herbivory, inundation and vandalism, fertilization and amendrment application, soil-nutrient testing, substrate handling, trppsport, and storage and minimization of impacts on existing wetland resources. The subgrade specifications target construction methods and equipment, soil-material testing, and performance. The other soil-related specifications quarantine and

*Home Production of Quality Meats and Sausages* World Health Organization  
Reports the findings and

recommendations of a working group convened to prepare guidelines for the use of herbal medicines in Western Pacific countries. Addressed to national health authorities, the report responds to the widespread use of herbal medicines in this part of the world and the corresponding need for mechanisms to ensure that these products are safe and effective, yet remain broadly accessible. With this need in mind, the report sets out a comprehensive framework for developing national policies designed to control the safety, efficacy and quality of herbal medicines, manufacturing practices, product registration and labeling, marketing and trade. The report has two parts. The guidelines are presented in the first, which opens with background information about the objectives of national policies aimed at the promotion, development, and regulation of herbal medicines. The need to define the place of traditional care within modern health systems is discussed together with the importance of conserving plant species. Against this background, the guidelines are presented in five chapters. General guidelines for the development of a national policy are followed by advice on the process by which national policies are developed and implemented. Ten specific issues that need to be addressed are identified and discussed.

Subsequent chapters outline legal and other options available for the regulation of practitioners, manufacturers and the distribution system. The guidelines conclude with a description of the different regulatory procedures that can be applied to raw plant materials, processed plant materials and medicinal herbal products. The regulation of medicinal herbal products is discussed in terms of detailed requirements for the registration of both traditionally used products and new products. The chapter also includes advice on labeling requirements, the responsible government agency, and establishment of a system for monitoring adverse reactions. The second part includes a summary of the working group's deliberations and conclusions, followed by brief reports from 14 Western Pacific countries, which document the importance of herbal medicines and summarize existing systems for their regulation and control.

**Plant Molecular Biology — A Laboratory Manual** Univ of California Press

There has been a need for a comprehensive one-volume reference on the manufacture of meats and sausages at home. There are many cookbooks loaded with recipes which do not build any foundation for the serious hobbyist to follow. This leaves him with little understanding of the sausage making process and afraid to introduce his own ideas. There are professional books that are written for meat plant managers or graduate students, unfortunately, these works are written in such difficult technical terms, that most of them are beyond the comprehension of an average person. *Home Production of Quality Meats and Sausages* bridges the gap that exists between highly technical

textbooks and the requirements of the typical hobbyist. In order to simplify this gap to the absolute minimum, technical terms were substituted with their equivalent but simpler terms and many photographs, drawings and tables were included. The book covers topics such as curing and making brines, smoking meats and sausages, U.S. Standards, making fresh, smoked, emulsified, fermented and air dried products, making special sausages such as head cheeses, blood and liver sausages, low salt, low fat and Kosher products, hams, bacon, butts and loins, poultry, fish and game, creating your own recipes and much more... To get the reader started 172 recipes are provided which were chosen for their originality and historical value. They carry an enormous value as a study material and as a valuable resource on making meat products and sausages. Although recipes play an important role in these products, it is the process that ultimately decides the sausage quality. It is perfectly clear that the authors don't want the reader to copy the recipes only: "We want him to understand the sausage making process and we want him to create his own recipes. We want him to be the sausage maker."

The late 1960s saw an extraordinary growth in the American nuclear industry: dozens of plants of unprecedented size were ordered throughout the country. Yet at the same time, public concern about the natural environment and suspicion of both government and industry increased dramatically. *Containing the Atom* is the first scholarly history of nuclear power regulation during those tumultuous years. J. Samuel Walker focuses on the activities of the U.S. Atomic Energy Commission, the agency entrusted with the primary responsibility for the safety of nuclear power, and shows that from the beginning the AEC faced a paradox: it was charged with both promoting and controlling the nuclear power industry. Out of this paradox grew severe tensions, which Walker discusses in detail. His balanced evaluation of the issues and the positions taken by the AEC and others makes this study an invaluable resource for all those interested in the continuing controversies that surround nuclear energy.
