In computer science and optimization theory, the max-flow min-cut theorem states that in a flow network, the maximum amount of flow passing from the source to the sink is equal to the total weight of the edges in the minimum cut, i.e. the smallest total weight of the edges which if removed would disconnect the source from the sink.. The max-flow min-cut theorem is a special case of the duality ...

As observed from Tables 3 and 4, general speaking, ELM and SVR obtain similar generalization performance, which is slightly higher than BP's in many cases.If the difference of the two testing RMSE obtained by two algorithms is larger than 0.005 for a case, the winner's testing RMSE will be shown in boldface in Tables 3 and 4.As observed from Table 5, ELM needs more hidden nodes than BP but it ...

It but remains to call attention to the fact that the earlier view of the liver as the seat of the soul gave way among many ancient nations to the theory which, reflecting the growth of anatomical knowledge, assigned that function to the heart, while, with the further change which led to placing the seat of soul-life in the brain, an attempt was made to partition the various functions of ...
