This text ventures into areas which the majority of control system books avoid. It was written to look at the area in a much wider form than the usual process control or machine control-systems. Many topics which are covered in other specialities are covered such as the stability of amplifiers, phase-locked loops, structural resonance and parasitic oscillations. It also covers the application and implementation of real-time digital controllers and for the first time the Amplitude-locked loop. An even wider look at the area is shown by examining classical or historic mathematical algorithms in terms of control-theory. Despite its wide range, the book is tutorial in nature and tries to avoid where possible an obtuse mathematical approach. It comes with MATLAB, LabView and a few Mathematica examples. The book is an ideal undergraduate text for engineers and a refresher for many practising engineers. It gives a thorough background in the analogue domain before moving on to digital-control and its applications. The proceeds from author royalties of this book will be donated to charity.

This book explores the role of phonological templates in early language use from the perspective of usage-based phonology and exemplar models and within the larger developmental framework of Dynamic Systems Theory. After analysing children's first words and their adult targets, Vihman sets out procedures for establishing the children's later prosodic structures and templates, drawing on data from American and British English, Estonian, Finnish, French, Italian, and Welsh; she also provides briefer longitudinal accounts of template use in Arabic and Brazilian Portuguese. The children are found to begin with simple word forms that match their selected adult targets; this is followed by the production of more challenging words, adapted to fit the child's existing patterns. Early accuracy is replaced by later recourse to an 'inner model' - a template - of a favoured word shape. The book also examines the timing, fading, quantification, and function of child phonological templates. In addition, two chapters focus on the use of templates in adult language, in the core grammar and in the more creative morphology of colloquial 'short forms' and hypocoristics in French and Estonian and of English rhyming compounds. The idea of templates is traced back to its origins in Prosodic Morphology, but its uses are most in evidence in the informal settings of adult language 'at play'. Throughout the volume, the discussion returns to the issues of emergent systematicity, the roles of articulatory and memory challenges for children, and the similarities and differences in the function of templates for adults as compared with children.

The objective of the workshops associated with the ER2000 19th International Conference on Conceptual Modeling was to give participants the opportunity to present and discuss emerging, hot topics, thus adding new perspectives to conceptual modeling. This attracts communities which have begun to or which have already recognized the importance of conceptual modeling for solving their problems. To meet this objective, we selected the following two topics: { Conceptual Modeling Approaches for E-Business (eCOMO2000) aimed at studying the application of conceptual modeling techniques speci cally to e-business. { The World Wide Web and Conceptual Modeling (WCM2000) which analyzes how conceptual modeling can help address the challenges of Web devel- ment, management, and use. eCOMO2000 is the rst international workshop on Conceptual Modeling - proaches for E-Business. It was intended to work out and to discuss the actual state of research on conceptual modeling aspects and methods within the realm of the network economy, which is driven by both traditionally organized ent- prises and dynamic networks. Following the philosophy of the ER workshops, the selection of eCOMO contributions was done very carefully and restrictively (six accepted papers out of thirteen submissions) in order to guarantee an excellent workshop program. We are deeply indebted to the authors and to the members of

the program committee, whose work resulted in this outstanding program.

Genre theory in the past few years has contributed immensely to our understanding of the way discourse is used in academic, professional and institutional contexts. However, its development has been constrained by the nature and design of its applications, which have invariably focused on language teaching and learning, or communication training and consultation. This has led to the use of simplified and idealised genres. In contrast to this, the real world of discourse is complex, dynamic and unpredictable. This tension between the real world of written discourse and its representation in applied genre-based literature is the main theme of this book. The book addresses this theme from the perspectives of four rather different worlds: the world of reality, the world of private intentions, the world of analysis and the world of applications. Using examples from a range of situations including advertising, business, academia, economics, law, book introductions, reports, media and fundraising, Bhatia uses discourse analysis to move genre theory away from educational contexts and into the real world. The book takes a practical approach and dives into code right from the start. After learning how to install Grok, we create a simple application. We work on this application throughout the book, until its deployment in the last chapter. In each chapter, some new features of Grok will be introduced and explained, then the application will be extended to use them, explaining step-by-step how each feature works. This book is intended for Python developers who want to create web applications but have little or no experience in web development. If you have used other web frameworks but are looking for one that enables you to create more complex applications without losing agility, you will also benefit from this book. The reader is expected to have some basic Python knowledge and at least a general idea of how a web application works.
