This book informs an
international audience of
teachers, scholars and
policymakers about the

development of learning progressions for primary and secondary geography education in various countries and regions of the world. The book represents an important contribution to learning progressions research and practice. The different chapters explore how curriculum standards and frameworks in different countries portray progress and sophistication in the learning of geography. The book compares educational systems and how teachers and curriculum developers use the concept of “learning progression” to guide

educational practices. As an approach to educational research, learning progressions offer considerable potential for understanding how children develop understanding of geographic concepts and practices across grade bands and in relation to national geography standards. The book analyzes the general conditions of learning progressions within the context of a globalized world. Important themes are addressed such as: knowledge acquisition in formal education; measuring learning progressions in informal settings; learning progressions

for one curriculum standard or several standards; conditions to assess progression in the learning of facts, concepts, and skills; and multiple pathways for understanding or learning geography. The contributing authors are experienced scientists in the field from all around the world giving specific insights into the practices of their countries. The book appeals to K-12 teachers, school administrators, policymakers, researchers in geography education, professors and lecturers at universities around the world. *Re-Inventing the*

This handbook is a comprehensive and up to date work of reference that offers a survey of the state of financial geography. With Brexit, a global recession triggered by the COVID-19 pandemic, as well as new financial technology threatening and promising to revolutionize finance, the map of the financial world is in a state of transformation, with major implications for development. With these developments in the

background, this handbook builds on this unprecedented momentum and responds to these epochal challenges, offering a comprehensive guide to financial geography. Financial geography is concerned with the study of money and finance in space and time, and their impacts on economy, society and nature. The book consists of 29 chapters organized in six sections: theoretical perspectives on financial geography, financial assets and markets, investors, intermediation, regulation and governance, and

finance, development and the environment. Each chapter provides a balanced overview of current knowledge, identifying issues and discussing relevant debates. Written in an analytical and engaging style by authors based on six continents from a wide range of disciplines, the work also offers reflections on where the research agenda is likely to advance in the future. The book's key audience will primarily be students and researchers in geography, urban studies, global studies and planning,

more or less familiar with financial geography, who seek access to a state-of-the-art survey of this area. It will also be useful for students and researchers in other disciplines, such as finance and economics, history, sociology, anthropology, politics, business studies, environmental studies and other social sciences, who seek convenient access to financial geography as a new and relatively unfamiliar area. Finally, it will be a valuable resource for practitioners in the public and private sector, including

business consultants and policy-makers, who look for alternative approaches to understanding money and finance.

The Geography of Rural Change provides a thorough

examination of the processes and outcomes of rural change as a result of a period of major restructuring in developed market economies. After outlining the main dimensions of rural change, the book progresses from a discussion of theoretical insights into rural restructuring to a consideration of both the extensive use of rural land and the

changing nature of rural economy and society. The text places an emphasis on relevant principles, concepts and theories of rural change, and these are supported by extensive case study evidence drawn from different parts of the developed world. The Geography of Rural Change is written for undergraduates taking courses in human geography, agricultural

geography, rural geography, rural sociology, planning and agricultural economics.

Fiscal risks are abating somewhat but remain elevated. In advanced economies, recent policy moves have broadly stabilized public debt ratios, but medium-term prospects are still uncertain, and debt remains at historic highs. Fiscal vulnerabilities are rising in both emerging market economies and low-income

countries, although in most cases from relatively moderate levels. Across country groups, fiscal policy should aim at rebuilding policy space while supporting the recovery and long-term growth prospects. Secured Transactions Law Reform in Africa CRC Press

Are there existing alternatives to corporate globalization? What are the prospects for and commonalities between communities and movements such as Occupy, the World Social Forum and alternative economies?

Globalization Development and Social Justice advances the proposition that another globalization is not only possible, but already exists. It demonstrates that there are multiple pathways towards development with social justice and argues that enabling propositional agency, rather than oppositional agency such as resistance, is a more effective alternative to neoliberal globalization. El Khoury develops a theory of infraglobalization that emphasizes creative

constitution, not just contestation, of global and local processes. The book features case studies and examples of diverse economic practice and innovative emergent political forms from the Global South and North. These case studies are located in the informal social economy and community development, as well as everyday practices, from prefigurative politics to community cooperatives and participatory planning. This book makes an important contribution to debates about

the prospects for, and practices of, a transformative grassroots globalization, and to critical debates about globalization and development strategies. It will be of interest to students and scholars of international relations, globalization, social movement studies, political and economic geography, sociology, anthropology and development studies.

Asia is regarded as the fastest growing area for international and domestic tourism in the world today and over the next 20 years. Given the economic, social and environmental importance of tourism in the region, there is a need for a comprehensive and readable overview of the critical debates and controversies in tourism in the region and the major factors that are affecting tourism

development both now and in the foreseeable future. This Handbook provides a contemporary survey of the region and its continued growth and development as a key destination and generator of tourism, which is marked by a high proportion of intra-regional travel. The book is divided into five sections. This first section provides an introduction to the region and context to the nationally focused chapters. The next three sections are then broadly based on the three UNWTO Asian regions:

South-East Asia, South and Central Asia, and East and North-East Asia, providing readers with a valuable snapshot of tourism at various scales, and from various approaches and positions. The concluding section considers future prospects for tourism in Asia. The handbook is interdisciplinary in coverage and is also international in scope through its authorship and content. It presents a range of perspectives and understanding of the processes and forces that are

shaping tourism in this fascinating and dynamic region that is one of the focal points of global tourism. This is essential reading for students, researchers and academics interested in tourism in the growth region of Asia now and in the future. Dictionary of Geography

Economy provides an in-depth and stimulating introduction to the 'globalization' of the world economy. The book offers a consideration of local, regional, national and global economic development over the long historical term. The theory and practice of economic and political geography provide a basis for understanding the interactions within and among the developed and developing countries of the world.

Illustrated in colour throughout, this new edition has been completely reworked and updated to take account of the substantial changes in the

world economy, and includes a new chapter on services. It is ideal for upper level university undergraduates and for post-graduates in a variety of specializations including geography, economics, political science, international relations and global studies.

An Introduction to the Microeconomics and Political Economy of Power Markets

Kluwer Law International B.V. Today Scotland's interests in the European Union are represented by the UK which, as one of the largest Member States, has the voting power and leverage to influence

decisions to the benefit of Scotland. In leaving the UK, a separate Scotland would lose this advantage. A separate Scotland is likely to have its application to join the EU accepted - but not within the self-imposed timetable of 18 months, nor with the terms, that the Scottish Government is proposing. The proposal that Article 48 of the Treaty on European Union could be used to provide for Scottish membership is not supported by any other EU state; senior EU figures have ruled it out and it is opposed by the United Kingdom Government - which

would, under this process, have to initiate it. The additional and exceptional demand for the ability to discriminate against UK students with respect to tuition fees would be voted against by the UK Government and is therefore almost certain not to be met. Furthermore, insufficient attention has been paid to the need to negotiate the UK's retention of VAT zero rating on a wide range of goods. As a separate Member State, not only would Scotland cease to benefit from the UK rebate (currently worth in the region of £ 300 million per year to Scotland) but it would

have to contribute to it. In these circumstances Scottish voters need a more realistic alternative perspective of how joining the EU would be achieved, and what its likely terms and timetable would be.

Arising from recent developments at the international level, many developing countries, indigenous peoples and local communities are considering using geographical indications (GIs) to protect traditional knowledge, and to promote trade and overall economic development. Despite the considerable enthusiasm over GIs in diverse quarters, there is

an appreciable lack of research on how far and in what context GIs can be used as a protection model for traditional knowledge-based resources. This book critically examines the potential uses of geographical indications as models for protecting traditional knowledge-based products and resources in national and international intellectual property legal frameworks. By analysing the reception towards GIs from developing countries and advocates of development in the various legal and non-legal regimes (including the World Trade Organization, World Intellectual Property Organization, and the Convention on Biological Diversity and the

Food and Agricultural Organization), the book evaluates the development potential of GIs in relation to ensuing changes in international intellectual property law in accommodating traditional knowledge. Teshager W. Dagne argues for a degree of balance in the approach to the implementation of global intellectual property rights in a manner that gives developing countries an opportunity to protect traditional knowledge-based products. The book will be of great interest and use to scholars and students of intellectual property law, public international law, traditional knowledge, and global governance.

The first textbook to present a comprehensive and detailed economic analysis of electricity markets, analyzing the tensions between microeconomics and political economy. The power industry is essential in our fight against climate change. This book is the first to examine in detail the microeconomics underlying power markets, stemming from peak-load pricing, by which prices are low when

the installed generation capacity exceeds demand but can rise a hundred times higher when demand is equal to installed capacity. The outcome of peak-load pricing is often difficult to accept politically, and the book explores the tensions between microeconomics and political economy. Understanding peak-load pricing and its implications is essential for designing robust policies and making sound investment decisions. Thomas-Olivier L é autier presents the model in its simplest form, and

introduces additional features as different issues are presented. The book covers all segments of electricity markets: electricity generation, under perfect and imperfect competition; retail competition and demand response; transmission pricing, transmission congestion management, and transmission constraints; and the current policy issues arising from the entry of renewables into the market and capacity mechanisms. Combining anecdotes and analysis of real situations with rigorous analytical modeling, each chapter analyzes one specific issue, first presenting findings in nontechnical terms accessible to policy practitioners and graduate students in management or public policy and then presenting a more mathematical analytical exposition for students and researchers specializing in the economics of electricity markets and for those who want to understand and apply the underlying models.

Community Policing - A European Perspective

International Monetary Fund
This book provides a view into the multi-dimensional and multi-contextual nature of community policing. It brings together important conceptual discussions as well as numerous case studies and real-life examples of European community policing practices. It further offers insights into how the (primarily locally focused) concept of community policing fits into an increasingly interconnected world. Our book is intended for professionals working in

community policing, academics and policymakers developing community policing procedures. In addition, the book aims to provide information for readers who are new to the subject of community policing. The wide range of examples and case studies make it also an excellent resource for teaching materials.

Central Peripheries explores post-Soviet Central Asia through the prism of nation-building. Although relative latecomers on the international scene, the Central Asian states see themselves as globalized, and yet in spite of – or perhaps precisely because of – this, they hold a very classical vision of the nation-state, rejecting the abolition of boundaries and the theory of the ‘ death of the nation ’ . Their unabashed celebration of very classical nationhoods built on post-modern

premises challenges the Western view of nationalism as a dying ideology that ought to have been transcended by post-national cosmopolitanism. Marlene Laruelle looks at how states in the region have been navigating the construction of a nation in a post-imperial context where Russia remains the dominant power and cultural reference. She takes into consideration the ways in which the Soviet past has influenced the construction of national storylines, as well as the

diversity of each state ' s narratives and use of symbolic politics. Exploring state discourses, academic narratives and different forms of popular nationalist storytelling allows Laruelle to depict the complex construction of the national pantheon in the three decades since independence. The second half of the book focuses on Kazakhstan as the most hybrid national construction and a unique case study of nationhood in Eurasia. Based on the principle that only

multidisciplinarity can help us to untangle the puzzle of nationhood, *Central Peripheries* uses mixed methods, combining political science, intellectual history, sociology and cultural anthropology. It is inspired by two decades of fieldwork in the region and a deep knowledge of the region ' s academia and political environment. Praise for *Central Peripheries* ' Marlene Laruelle paves the way to the more focused and necessary outlook on Central Asia, a region that is

not a periphery but a central space for emerging conceptual debates and complexities. Above all, the book is a product of Laruelle's trademark excellence in balancing empirical depth with vigorous theoretical advancements. ' – Diana T. Kudaibergenova, University of Cambridge ' Using the concept of hybridity, Laruelle explores the multitude of historical, political and geopolitical factors that predetermine different ways of looking at

nations and various configurations of nation-building in post-Soviet Central Asia. Those manifold contexts present a general picture of the transformation that the former southern periphery of the USSR has been going through in the past decades. In recent years, the United Kingdom has become a more and more divided

society with inequality between the regions as marked as it has ever been. In a landmark analysis of the current state of Britain ' s regional development, Philip McCann utilises current statistics, examines historical trends and makes pertinent international comparisons to assess the state of the nation. The UK Regional – National Economic Problem brings attention to the highly centralised, top down governance structure that the UK deploys, and demonstrates that it is less

than ideally placed to rectify these inequalities. The ' North-South ' divide in the UK has never been greater and the rising inequalities are evident in almost all aspects of the economy including productivity, incomes, employment status and wealth. Whilst the traditional economic dominance of London and its hinterland has continued along with relative resilience in the South West of England and Scotland, in contrast the Midlands, the North of

England, Northern Ireland and Wales lag behind by most measures of prosperity. This inequality is greatly limiting national economic performance and the fact that Britain has a below average standard of living by European and OECD terms has been ignored. The UK ' s economic and governance inequality is unlikely to be fundamentally rebalanced by the current governance and connectivity trends, although this definitive study suggests that some areas of improvement

are possible if they are well implemented. This pivotal analysis is essential reading for postgraduate students in economics and urban studies as well as researchers and policy makers in local and central government. The local food movement is one of the most active of current civil engagement social movements. This work presents primary evidence from over 900 documents, interviews, and participant observations, and provides the first descriptive history of local food movement national policy achievements in the US, from 1976 to 2013, and in the UK, from 1991 to 2013, together with reviews of both the American and British local

food movements. It provides a US-UK comparative context, significantly updating earlier comparisons of American, British and European farm and rural policies. The comparative perspective shows that, over time, more effective strategies for national policy change required social-movement building strategies, such as collaborative policy coalitions, capacity-building for smaller organizations, and policy entrepreneurship for joining together separate rural, farming, food, and

health interests. In contrast, narrowly-defined single issue campaigns often undermined long-term policy change, even if short-term wins emerged. By profiling interviews of American and English movement leaders, policymakers, and funders, the book demonstrates that democratic participation in food policy is best supported when funders incentivize groups to work together and overcome their differences.
