Consumer Science and Strategic Marketing: Case Studies in the Traditional Food Sector aims to close the gap between academic researchers and industry professionals through real world scenarios and field-based research. The book explores how consumer and sensory science has been implemented in the food industry for achieving the following strategic aims: rejuvenating product image, shaping new market places, achieving market differentiation and geographical diffusion, achieving customer loyalty, promoting traditional features of the product and defining product positioning in competitive environment. There is an emerging demand from food industry professionals and undergraduate and postgraduate students who attend business and agricultural studies courses who want to gain practical information through real cases and field-based research. This book aims to answer the following questions, amongst others: How research in the field of consumer science became relevant for marketing strategies?, Which tangible economic and financial outcomes have been obtained by the joint work of sensory scientists, researchers in marketing field and food business professionals?, and which communication methods and practices have been relevant to make the most of R&D in the food industry? Through case studies, successful examples and practices are provided, with newer inputs for further theoretical investigation given. Both current and future professionals in the food industry will gain insights that can be used in their business environment. Bridges the gap

between scholars and practitioners in understanding consumers in the traditional food sector Allows scientists and professionals to make the most of R&D outcomes Advances consumer science research to address business problems in the food industry

This book charts the difficulties encountered by vulnerable consumers in their access to justice, through the contributions of prominent authors (academic, practitioners and consultants) in the field of consumer law and access to justice. It demonstrates that despite the development of ADR, access to justice is still severely lacking for the vulnerable consumer. The book highlights that a broad understanding of access to justice, which encompasses good regulation and its public enforcement, is an essential ingredient alongside access to the mechanisms of traditional private justice (courts and ADR) to protect the vulnerable consumer. Indeed, many of the difficulties are linked to normative obstacles and lack of access to justice is primarily a vulnerability in itself that can exacerbate existing ones. In addition, because it may contribute to 'pushing' already vulnerable consumers into social exclusion it is not simply about economic justice but also about social justice. The book shows that lack of access to justice is not irreversible nor is it necessarily linked to consumer apathy. New technologies could provide solutions. The book concludes with a plea for developing 'inclusive' justice systems with more emphasis on public enforcement alongside effective courts systems to offer the vulnerable with adequate means to defend themselves. This book will be suitable for both students and practitioners, and all those with an interest in the justice system.

Central Peripheries explores post-Soviet Central Asia through the prism of nation-building. Although relative latecomers on the international scene, the Central Asian states see themselves as globalized, and yet in spite of – or perhaps precisely because of – this, they hold a very classical vision of the nation-state, rejecting the abolition of boundaries and the theory of the 'death of the nation'. Their unabashed celebration of very classical nationhoods built on post-modern premises challenges the Western view of nationalism as a dying ideology that ought to have been transcended by post-national cosmopolitanism. Marlene Laruelle looks at how states in the region have been navigating the construction of a nation in a post-imperial context where Russia remains the dominant power and cultural reference. She takes into consideration the ways in which the Soviet past has influenced the construction of national storylines, as well as the diversity of each state's narratives and use of symbolic politics. Exploring state discourses, academic narratives and different forms of popular nationalist storytelling allows Laruelle to depict the complex

construction of the national pantheon in the three decades since independence. The second half of the book focuses on Kazakhstan as the most hybrid national construction and a unique case study of nationhood in Eurasia. Based on the principle that only multidisciplinary can help us to untangle the puzzle of nationhood, Central Peripheries uses mixed methods, combining political science, intellectual history, sociology and cultural anthropology. It is inspired by two decades of fieldwork in the region and a deep knowledge of the region's academia and political environment. Praise for Central Peripheries 'Marlene Laruelle paves the way to the more focused and necessary outlook on Central Asia, a region that is not a periphery but a central space for emerging conceptual debates and complexities. Above all, the book is a product of Laruelle's trademark excellence in balancing empirical depth with vigorous theoretical advancements.' – Diana T. Kudaibergenova, University of Cambridge 'Using the concept of hybridity, Laruelle explores the multitude of historical, political and geopolitical factors that predetermine different ways of looking at nations and various configurations of nation-building in post-Soviet Central Asia. Those manifold contexts present a general picture of the transformation that the former southern periphery of the USSR has been going through in the past decades.' – Sergey Abashin, European University at St Petersburg

The first textbook to present a comprehensive and detailed economic analysis of electricity markets, analyzing the tensions between microeconomics and political economy. The power industry is essential in our fight against climate change. This book is the first to examine in detail the microeconomics underlying power markets, stemming from peak-load pricing, by which prices are low when the installed generation capacity exceeds demand but can

rise a hundred times higher when demand is equal to installed capacity. The outcome of peak-load pricing is often difficult to accept politically, and the book explores the tensions between microeconomics and political economy. Understanding peak-load pricing and its implications is essential for designing robust policies and making sound investment decisions. Thomas-Olivier Léautier presents the model in its simplest form, and introduces additional features as different issues are presented. The book covers all segments of electricity markets: electricity generation, under perfect and imperfect competition; retail competition and demand response; transmission pricing, transmission congestion management, and transmission constraints; and the current policy issues arising from the entry of renewables into the market and capacity mechanisms. Combining anecdotes and analysis of real situations with rigorous analytical modeling, each chapter analyzes one specific issue, first presenting findings in nontechnical terms accessible to policy practitioners and graduate students in management or public policy and then presenting a more mathematical analytical exposition for students and researchers specializing in the economics of electricity markets and for those who want to understand and apply the underlying models.

This book informs an international audience of teachers, scholars and policymakers about the development of learning progressions for primary and secondary geography education in various countries and regions of the world. The book represents an important contribution to learning progressions research and practice. The different chapters explore how curriculum standards and frameworks in different countries portray progress and sophistication in the learning of geography. The book compares educational systems and how teachers and curriculum developers use the concept of "learning progression" to guide educational practices. As an approach to educational research, learning progressions offer considerable potential for understanding how children develop understanding of geographic concepts and practices across grade bands and in relation to national geography standards. The book analyzes the general conditions of learning progressions within the context of a globalized world. Important themes are addressed such as: knowledge acquisition in formal education; measuring learning progressions in informal settings; learning progressions for one curriculum

standard or several standards; conditions to assess progression in the learning of facts, concepts, and skills; and multiple pathways for understanding or learning geography. The contributing authors are experienced scientists in the field from all around the world giving specific insights into the practices of their countries. The book appeals to K-12 teachers, school administrators, policymakers, researchers in geography education, professors and lecturers at universities around the world.

For some time now, there has been conflict concerning the role in the global marketplace of certain agricultural or handcrafted products of specific geographical origin: whether they should come under trademark law (as favoured by common law countries such as the United States) or under the geographical indications (GI) system developed in France and subsequently promoted by the European Union (EU). At this moment, China is in the eye of the storm. Taking fully into account the legislative and judicial gaps in China's compromised embrace of the GI concept, this book shows how the Chinese case brings to prominence fundamental issues relating to the functional dissimilarity between trademarks and GIs, the treatment of the terroir concept, the role of GIs in rural development, and the challenges of adopting the French and European model in other countries, especially in East Asia. Providing detailed information on how GIs are registered, protected, and managed in China, France, and the EU, the book includes such practical analysis as the following: comparison between the Chinese and European GI systems to highlight differences in essential elements for GI registration and protection; mistakes and errors arising from forcing the GI function into trademark law; the increasingly larger scope of EU GI protection, protection of collective marks containing GIs, and the extension of GI protection to handicrafts; who is responsible for the protection of each registered name and who can sue for infringement; and legislative options for future GI protection in China. Recognizing not only that GIs protect consumers against fraud and producers against unfair competition but also that the goals include the preservation of rural development, cultural heritage, and traditional knowledge, as well as environmental and ecological protection, this book provides a comprehensive reference on legal tools available for policymakers, legal practitioners, researchers, and local producers concerned with GI or trademark issues in China, France, or the EU. It will prove greatly helpful to corporate lawyers filing international registration applications and taking legal action. It will also be of inestimable value to officials in a variety of countries that are considering developing or improving systems to enhance the value of terroir products, and to academics interested in intellectual property law, trademark law, agriculture policy, GI legislation, or World Trade Organization (WTO) rules.

The Geography of Rural Change provides a thorough examination of the processes and outcomes of rural change as a result of a period of major restructuring in developed market economies. After outlining the main dimensions of rural change, the book progresses from a discussion of theoretical insights into rural restructuring to a consideration of both the extensive use of rural land and the changing nature of rural economy and society. The text places an emphasis on relevant principles, concepts and theories of rural change, and these are supported by extensive case study evidence drawn from different parts of the developed world. The Geography of Rural Change is written for undergraduates taking courses in human geography, agricultural geography, rural geography, rural sociology, planning and agricultural economics.

This book, which is the first to be published in the emerging field of farm-level microsimulation, highlights the different methodological components of microsimulation modelling: hypothetical, static, dynamic, behavioural, spatial and macro-micro. The author applies various microsimulation-based methodological tools to farms in a consistent manner and, supported by a set of Stata codes, undertakes analysis of a wide range of farming systems from OECD countries. To these case studies, O'Donoghue incorporates farming policies such as CAP income support payments, agri-environmental schemes, forestry planting incentives and biomass incentives – in doing so, he illuminates the merits of microsimulation in this

environment.

Geographic Information Systems (GIS) provide essential disaster management decision support and analytical capabilities. As such, homeland security professionals would greatly benefit from an interdisciplinary understanding of GIS and how GIS relates to disaster management, policy, and practice. Assuming no prior knowledge in GIS and/or disaster management, Geographic Information Systems (GIS) for Disaster Management guides readers through the basics of GIS as it applies to disaster management practice. Using a hands-on approach grounded in relevant GIS and disaster management theory and practice, this textbook provides coverage of the basics of GIS. It examines what GIS can and can't do, GIS data formats (vector, raster, imagery), and basic GIS functions, including analysis, map production/cartography, and data modeling. It presents a series of real-life case studies that illustrate the GIS concepts discussed in each chapter. These case studies supply readers with an understanding of the applicability of GIS to the full disaster management cycle. Providing equal treatment to each disaster management cycle phase, the book supplies disaster management practitioners and students with coverage of the latest developments in GIS for disaster management and emerging trends. It takes a learning-by-examples approach to help readers apply what they have learned from the examples and disaster management scenarios to their specific situations. The book illustrates how GIS technology can help disaster management professionals, public policy makers, and decision-makers at the town, county, state, federal, and international levels. Offering software-neutral best practices, this book is suitable for use in undergraduate- or graduate-level disaster management courses. Offering extensive career advice on GIS for disaster management from working professionals, the book also includes a GIS for disaster management research agenda and ideas for staying current in the field.

Over the last few decades, many countries have reformed their secured transactions law. One of the main reasons has been the clear link between reform and the availability of credit, and the drive to improve access to finance, particularly for micro, small and medium-sized enterprises. This book focuses particularly on developing economies in Africa, which have legal frameworks influenced by English, French, Belgian, Roman-Dutch and other laws. Reform in this area of law across African countries has taken a number of forms, which are explored and discussed in this book. Secured

Transactions Law Reform in Africa is a mixture of a critical description of the pre-reform law and practice, and the reform process itself. It also includes a comparative analysis of the legal provisions and an examination of the early results of the reforms. The book sets out a road map for the future of secured transactions reform; primarily in Africa, but also in other countries that have undertaken or are contemplating similar reforms. This book is the second in a series of books about Secured Transactions Law in countries around the world, and its reform, both on a national and an international scale. The first book, Secured Transactions Law Reform: Principles, Policies and Practice, was published in 2016.

Fiscal risks are abating somewhat but remain elevated. In advanced economies, recent policy moves have broadly stabilized public debt ratios, but medium-term prospects are still uncertain, and debt remains at historic highs. Fiscal vulnerabilities are rising in both emerging market economies and low-income countries, although in most cases from relatively moderate levels. Across country groups, fiscal policy should aim at rebuilding policy space while supporting the recovery and long-term growth prospects.

The Geography of the World Economy provides an in-depth and stimulating introduction to the 'globalization' of the world economy. The book offers a consideration of local, regional, national and global economic development over the long historical term. The theory and practice of economic and political geography provide a basis for understanding the interactions within and among the developed and developing countries of the world. Illustrated in colour throughout, this new edition has been completely reworked and updated to take account of the substantial changes in the world economy, and includes a new chapter on services. It is ideal for upper level university undergraduates and for post-graduates in a variety of specializations including geography, economics, political science, international relations and global studies.

with which the EU does not have a comprehensive trade agreement. Australia and the EU are entering a new phase in the bilateral relationship, and the push towards a potential trade agreement has been steadily gaining momentum. This collection brings together diverse and deeply practical contributions to the forthcoming policy debate on the Australia-EU Free Trade Agreement (FTA), highlighting potential points of difficulty and possible gains from the agreement. This book makes two further contributions: it adds to the body of work reappraising the contemporary Australia-EU relationship; and provides a snapshot of current issues in trade policy—the 'new trade agenda'—which is more complex and politically visible than ever. The issues confronting Australia and the EU in forthcoming negotiations are those confronting policy makers around the globe. They are testing public tolerance of decisions once viewed as dull and technocratic, and are redefining the academic treatment of trade policy. '... this book is especially important because it is talking about a very different type of trade agreement than the ones Australia has concluded recently with our major trading partners in East Asia. An agreement with the EU inevitably will focus on issues like services, investment, government procurement, and competition policy. These are major issues in their own right, are key parts of the new trade agenda, and are critical to Australia's successful transition to a prosperous post-mining boom economy. In the absence of generalisable unilateral economic reform in this country, trade policy hopefully will provide an external source of pressure for reform. If this book adds to that pressure while also suggesting some of the tools needed for reform, it will have made a major contribution.' Dr Mike Adams, Partner, Trading Nation Consulting
