BGE S1-S3 Geography: Third and Fourth Levels Disha Publications

This book offers an assessment of the naval policies of emerging naval powers, and the implications for maritime security relations and the global maritime order. Since the end of the Cold War, China, Japan, India and Russia have begun to challenge the status quo with the acquisition of advanced naval capabilities. The emergence of rising naval powers is a cause for concern, as the potential for great power instability is exacerbated by the multiple maritime territorial disputes among new and established naval powers. This work explores the underlying sources of maritime ambition through an analysis of various historical cases of naval expansionism. It analyses both the sources and dynamics of international naval competition, and looks at the ways in which maritime stability and the widespread benefits of international commerce and maritime resource extraction can be sustained through the twenty-first century. This book will be of much interest to students of naval power, Asian security and politics, strategic studies, security studies and IR in general.

Summer Bridge Activities®, Grades 4 - 5 Hodder Gibson

Developments in the Theory and Practice of Cybercartography—awarded an Honorable Mention in Earth Science at the Association of American Publishers' 2015 PROSE Awards—examines some of the recent developments in the theory and practice of cybercartography and the substantial changes which have taken place since the first edition published in 2005. It continues to examine the major elements of cybercartography and emphasizes the importance of interaction between theory and practice in developing a paradigm which moves beyond the concept of Geographic Information Systems (GIS) and Geographical Information Science. Cybercartography is a new paradigm for maps and mapping in the information era. Defined as "the organization, presentation, analysis and communication of spatially referenced information on a wide variety of topics of interest to society," cybercartography is presented in an interactive, dynamic, multisensory format with the use of multimedia and multimodal interfaces. The seven major elements of cybercartography outlined in the first edition have been supplemented by six key ideas and the definition of cybercartography has been extended and expanded. The new practice of mapping traditional knowledge in partnership with indigenous people has led to new theoretical understanding as well as innovative cybercartographic atlases. Featuring more than 90% new and revised content, this volume is a result of a multidisciplinary team effort and has benefited from the input of partners from government, industry and aboriginal non-governmental organizations. - Honorable Mention in the the 2015 PROSE Awards in Earth Science from the Association of American Publishers - Highlights the relationship between cybercartography and critical geography - Incorporates several new cybercartographic atlases produced in cooperation with Inuit and First Nations groups - Showcases legal, ethical, consent and policy implications of mapping local and traditional knowledge - Features an interactive companion web site

Historians generally recognise E.A. Preobrazhensky as the most famous Soviet economist of the 1920s. English-language readers know him best as author of *The New Economics* and co-author (with N.I. Bukharin) of *The ABC of Communism*. The documents in this volume, many newly discovered and almost all translated into English for the first time, reveal a Preobrazhensky previously unknown, whose interests ranged far beyond economics to include not only party debates and issues affecting the

lives of workers and peasants, but also philosophy, world events, and Russian history, culture and politics. Including moments of triumph and tragedy, they tell an intimate story of political awakening and of commitment to socialist revolution as the path to human dignity.
