**Geography in America at the Dawn of the 21st Century** surveys American geographers' current research in their specialty areas and tracks trends and innovations in the many subfields of geography. As such, it is both a 'state of the discipline' assessment and a topical reference. It includes an introduction by the editors and 47 chapters, each on a specific specialty. The authors of each chapter were chosen by their specialty group of the American Association of Geographers (AAG). Based on a process of review and revision, the chapters in this volume have become truly representative of the recent scholarship of American geographers. While it focuses on work since 1990, it additionally includes related prior work and work by non-American geographers. The initial *Geography in America* was published in 1989 and has become a benchmark reference of American geographical research during the 1980s. This latest volume is completely new and features a preface written by the eminent geographer, Gilbert White.

With the increasing focus on science education, growing attention is being paid to how science is taught. Educators in science and science-related disciplines are recognizing that distance delivery opens up new opportunities for delivering information, providing interactivity, collaborative opportunities and feedback, as well as for increasing access for students. This book presents the guidance of expert science educators from the US and from around the globe. They describe key concepts, delivery modes and emerging technologies, and offer models of practice. The book places particular emphasis on experimentation, lab and field work as they are fundamentally part of the education in most scientific disciplines. Chapters include: \* Discipline methodology and teaching strategies in the specific areas of physics, biology, chemistry and earth sciences. \* An overview of the important and appropriate learning technologies (ICTs) for each major science. \* Best practices for establishing and maintaining a successful course online. \* Insights and tips for handling practical components like laboratories and field work. \* Coverage of breaking topics, including MOOCs, learning analytics, open educational resources and m-learning. \* Strategies for engaging your students online.

Studies in East African Geography and Development Rowman & Littlefield

"An important contribution to our understanding of the distribution of retail activities, particularly within cities, this book provides a critical review of the literature on the subject. It points out the major general propositions concerning retailing from the geographical point of view, and identifies key research problems, which need to be examined in order to push forward the frontiers of this sub field of economic geography. It presents a major critique of the central-place model, which has come to hold an important place in the methodology of economic geography, and clearly and decisively shows the model to be static, deterministic, retrospective and of little value for predictive purposes."--Provided by publisher.

The Geography of Tourism and Recreation presents the first comprehensive introduction to tourism, leisure and recreation and the relationships between them. This accessible text includes a wealth of international case studies spanning Europe, North America, Australasia and China. Each chapter highlights the methods used by geographers to analyse recreation and tourism. It also introduces new perspectives from gender

studies and postmodernism and examines key issues including \* the demand and supply of recreation and tourism \* the role of public policy, planning and management \* the impact of tourism and recreation on urban, rural, mountain and coastal environments \* tourism and recreation in wilderness areas and other peripheral regions. The use of student text features makes it ideal for course use.

This is the first book to take a comprehensive view of the historical geography of Scotland since the Union. The period is divided into sections separated by the Napoleonic Wars and the First World War, and each section offers a general view followed by detailed studies giving a balanced coverage of regional and urban-rural criteria, and the economic infrastructure. The book contains a number of original researches and Dr Turnock attempts to set the Scottish experience in a framework of general ideas on modernisation.

Geography is a wide-ranging discipline and the number of information sources available is truly enormous. These include printed books and journal articles, maps, satellite photographs, archives, statistical information, and much else. One particular problem facing geographers is that when one studies a foreign country, information may be available only in the foreign country and difficult to obtain. This book discusses the information sources available to geographers.
