The country's location within the region and population of more than 50m will help it achieve growth, with international

analysts predicting Myanmar's economy to be worth up to \$200bn by 2030. With elections set to take place in late 2015, the world is eagerly watching to see how things will unfold. After spending decades as one of the most isolated and least-developed countries in Asia, Myanmar is emerging as one of the world's fastest-growing economies.

Agriculture, manufacturing and mining are some of Myanmar's top contributors to GDP, which was forecast to reach 8.5% in FY2014/15 and FY2015/16. While foreign investment is accelerating, there are ways in which it remains blocked. As the country continues to reintegrate with the global economy, continued reforms as well as the opening of more economic sectors to foreign investors will help unlock the country's potential.

has ever been. In a landmark analysis of the current state of Britain's regional development, Philip McCann utilises current statistics, examines historical trends and makes pertinent international comparisons to assess the state of the nation. The UK Regional – National Economic Problem brings attention to the highly centralised, top down governance structure that the UK deploys, and demonstrates that it is less than ideally placed to rectify these inequalities. The 'North-South' divide in the UK has never been greater and the rising inequalities are evident in almost all aspects of the economy including productivity, incomes, employment status and wealth. Whilst the traditional economic dominance of London and its hinterland has continued along with relative resilience in the South West of England and Scotland, in contrast the Midlands, the North of England, Northern Ireland and Wales lag behind by most measures of prosperity. This inequality is greatly limiting national economic performance and the fact that Britain has a below average standard of living by European and OECD terms has been ignored. The UK's economic and governance inequality is unlikely to be fundamentally rebalanced by the current governance and connectivity trends, although this definitive study suggests that some areas of improvement are possible if they are well implemented. This pivotal analysis is essential reading for postgraduate students in economics and urban studies as well as researchers and policy makers in local and central government.

WINNER OF THE LIONEL GELBER PRIZE A NEW YORK TIMES NOTABLE BOOK OF 2018 ONE OF THE ECONOMIST'S BOOKS OF THE YEAR A NEW YORK TIMES CRITICS' TOP BOOK "An intelligent explanation of the mechanisms that produced the crisis and the response to it...One of the great strengths of Tooze's book is to demonstrate the deeply intertwined nature of the European and American financial systems."--The New York Times Book Review From the prizewinning economic historian and author of Shutdown and The Deluge, an eye-opening reinterpretation of the 2008 economic crisis (and its ten-year aftermath) as a global event that directly led to the shockwaves being felt around the world today. We live in a world where dramatic shifts in the domestic and global economy command the headlines, from rollbacks in US banking regulations to tariffs that may ignite international trade wars. But current events have deep roots, and the key to navigating today's roiling policies lies in the events that started it all—the 2008 economic crisis and its aftermath. Despite initial attempts to downplay the crisis as a local incident, what happened on Wall Street beginning in 2008 was, in fact, a dramatic caesura of global significance that spiraled around the world, from the financial markets of the UK and Europe to the factories and dockyards of Asia, the Middle East, and Latin America, forcing a rearrangement of global governance. With a historian's eye for detail, connection, and consequence, Adam Tooze brings the story right up to today's negotiations, actions, and threats—a much-needed perspective on a global catastrophe and its long-term consequences.

How RFID, a ubiquitous but often invisible mobile technology, identifies tens of billions of objects as they move through the world. RFID (Radio Frequency Identification) is ubiquitous but often invisible, a mobile technology used by more people more often than any flashy smartphone app. RFID systems use radio waves to communicate identifying information, transmitting data from a tag that carries data to a reader that accesses the data. RFID tags can be found in credit cards, passports, key fobs, car windshields, subway passes, consumer electronics, tunnel walls, and even human and animal bodies—identifying tens of billions of objects as they move through the world. In this book, Jordan Frith looks at RFID technology and its social impact, bringing into focus a technology that was designed not to be noticed. RFID, with its ability to collect unique information about almost any material object, has been hyped as the most important identification technology since the bar code, the linchpin of the Internet of Things—and also seen (by some evangelical Christians) as a harbinger of the end times. Frith views RFID as an infrastructure of identification that simultaneously functions as an infrastructure of communication. He uses RFID to examine such larger

---

issues as big data, privacy, and surveillance, giving specificity to debates about societal trends. Frith describes how RFID can monitor hand washing in hospitals, change supply chain logistics, communicate wine vintages, and identify rescued pets. He offers an accessible explanation of the technology, looks at privacy concerns, and pushes back against alarmist accounts that exaggerate RFID's capabilities. The increasingly granular practices of identification enabled by RFID and other identification technologies, Frith argues, have become essential to the working of contemporary networks, reshaping the ways we use information.

The quality of drinking water is paramount for public health. Despite important improvements in the last decades, access to safe drinking water is not universal. The World Health Organization estimates that almost 10% of the population in the world do not have access to improved drinking water sources. Among other diseases, waterborne infections cause diarrhea, which kills nearly one million people every year, mostly children under 5 years of age. On the other hand, chemical pollution is a concern in high-income countries and an increasing problem in low- and middle-income countries. Exposure to chemicals in drinking water may lead to a range of

---

chronic non-communicable diseases (e.g., cancer, cardiovascular disease), adverse reproductive outcomes, and effects on children's health (e.g., neurodevelopment), among other health effects. Although drinking water quality is regulated and monitored in many countries, increasing knowledge leads to the need for reviewing standards and guidelines on a nearly permanent basis, both for regulated and newly identified contaminants. Drinking water standards are mostly based on animal toxicity data, and more robust epidemiologic studies with accurate exposure assessment are needed. The current risk assessment paradigm dealing mostly with one-by-one chemicals dismisses the potential synergisms or interactions from exposures to mixtures of contaminants, particularly at the low-exposure range. Thus, evidence is needed on exposure and health effects of mixtures of contaminants in drinking water. Finally, water stress and water quality problems are expected to increase in the coming years due to climate change and increasing water demand by population growth, and new evidence is needed to design appropriate adaptation policies. This Special Issue of International Journal of Environmental Research and Public Health (IJERPH) focuses on the current state of knowledge on the links between drinking water quality and human health.

The rise of China has brought about a dramatic increase in the rate of migration from mainland China. At the same time, the Chinese government has embarked on a full-scale push for the internationalisation of Chinese media and culture. Media and communication have therefore become

crucial factors in shaping the increasingly fraught politics of transnational Chinese communities. This book explores the changing nature of these communities, and reveals their dynamic and complex relationship to the media in a range of countries worldwide. Overall, the book highlights a number of ways in which China's "going global" policy interacts with other factors in significantly reshaping the content and contours of the diasporic Chinese media landscape. In doing so, this book constitutes a major rethinking of Chinese transnationalism in the twenty-first century.
