The ever-increasing awareness and growing focus on environmental issues such as climate change and energy use is bringing about an urgency in expanding research to provide possible solutions to these problems. Through current engineering research and emerging technologies, scientists work to combat modern environmental and ecological problems plaguing the globe. Advanced Methodologies and Technologies in Engineering and Environmental Science provides emerging research on the current and forthcoming trends in engineering and environmental sciences to resolve several issues plaguing researchers such as fossil fuel emission and climate change. While highlighting these challenges, including chemical toxicity environmental responsibility, readers will learn how engineering applications can be used across disciplines to aid in reducing environmental hazards. This book is a vital resource for engineers, researchers, professors, academicians, and environmental scientists seeking current research on how engineering tools and technologies can be applied to environmental issues.

How do nations come to shape our collective imagination so profoundly? This book argues that the power of national identity and national belonging stems, in part, from the ways in which nationalism is embedded in popular culture. Comprised of chapters covering a wide range of cases from both the Global North and Global South (including Argentina, Australia, Canada, Europe, Israel, Pakistan, and the United States), the text unpacks the connections between nationalism and film, television, music, and other facets of everyday culture. In doing so, it demonstrates that popular culture can help us understand why and how nationhood has become so deeply entrenched in modern society. This book will be of interest to scholars of political science, nationalism, sociology, history, media studies, and cultural studies.

Mastering Primary Geography introduces the primary geography curriculum and helps trainees and teachers learn how to plan and teach inspiring lessons that make learning geography irresistible. Topics covered include: · Current developments in geography · Geography as an irresistible activity · Geography as a practical activity · Skills to develop in geography · Promoting curiosity · Assessing children in geography · Practical issues This guide includes examples of children's work, case studies, readings to reflect upon and reflective questions that all help to show students and teachers what is considered to be best and most innovative practice, and how they can use that knowledge in their own teaching to the greatest effect. The book draws on the experience of two leading professionals in primary geography, Anthony Barlow and Sarah Whitehouse, to provide the essential guide to teaching geography for all trainee and qualified primary teachers.

Ethnography has established itself as a key strategy of qualitative research in education, because it is so versatile, flexible, and ambiguous. Its growing importance coincides with an increasing diversity of « discovered « educational realities. In the process, many basic assumptions have turned into genuine tasks of research. Where are the places and times of learning, education, and social work to be found? Who are the actors and addressees? How are education and learning performed and enacted? The contributions to this volume discuss the multiple challenges that ethnographic research has to confront when exploring the multimodality,

plurality, and translocality of educational realities.

Global value chains (GVCs) are a key feature of the global economy in the 21st century. They show how international investment and trade create cross-border production networks that link countries, firms and workers around the globe. This Handbook describes how GVCs arise and vary across industries and countries, and how they have evolved over time in response to economic and political forces. With chapters written by leading interdisciplinary scholars, the Handbook unpacks the key concepts of GVC governance and upgrading, and explores policy implications for advanced and developing economies alike. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 10.0px Arial}

This book provides a unique assessment of the development of research in geography education and its future prospects, offering a challenging critique of subject-based education research, with particular reference to geography education across a range of different jurisdictions. It covers a range of topics, including the changing role of research in geography education; the relationship between education research and professional practice, with special reference to geography education research; the place of academic subject knowledge in geography education research; critiques of the functions of research in geography education; and the key issues for education policy and policymakers concerning educational research at national and international levels. Importantly, in a period marked by radical change for education research and researchers, the book offers a timely appraisal of possible ways forward for geography education research. Addressing the needs of academics, research students, policymakers, and education practitioners who undertake, use or shape the future of research in geography education, it comprehensively explores the forces that have driven the development of geography education research and pedagogy. Further, by positioning its analysis in the context of education

policy debates in the UK, and further afield, it assesses the role and function of research in education, and offers an outlook on its future. This book is essential reading for all those who wish to understand the sporadic and increasingly uncertain development of subject-based research in education

Volumes 2A and 2B of The Handbook of Economic Growth summarize recent advances in theoretical and empirical work while offering new perspectives on a range of growth mechanisms, from the roles played by institutions and organizations to the ways factors beyond capital accumulation and technological change can affect growth. Written by research leaders, the chapters summarize and evaluate recent advances while explaining where further research might be profitable. With analyses that are provocative and controversial because they are so directly relevant to public policy and private decision-making, these two volumes uphold the standard for excellence in applied economics set by Volumes 1A and 1B (2005). Offers definitive theoretical and empirical scholarship about growth economics Empowers readers to evaluate the work of other economists and to plan their own research projects Demonstrates the value of empirical testing, with its implicit conclusion that our understanding of economic growth will help everyone make better decisions

New Lines takes the pulse of a society increasingly drawn to the power of the digital map, examining the conceptual and technical developments of the field of geographic information science as this work is refracted through a pervasive digital culture. Matthew W. Wilson draws together archival research on the birth of the digital map with a reconsideration of the critical turn in mapping and cartographic thought. Seeking to bridge a foundational divide within the discipline of geography—between cultural and human geographers and practitioners of Geographic Information Systems (GIS)—Wilson suggests that GIS practitioners may operate within a critical vacuum and may not fully contend with their placement within broader networks, the politics of mapping, the rise of the digital humanities, the activist possibilities of appropriating GIS technologies, and more. Employing the concept of the drawn and traced line, Wilson treads the theoretical terrain of Deleuze, Guattari, and Gunnar Olsson while grounding their thoughts with the hybrid impulse of the more-than-human thought of Donna Haraway. What results is a series of interventions—fractures in the lines directing everyday life—that provide the reader with an opportunity to consider the renewed urgency of forceful geographic representation. These five fractures are criticality, digitality, movement, attention, and quantification. New Lines examines their traces to find their potential and their necessity in the face of our frenetic digital life.

Critical GIS and the Trouble of the Map Routledge

Since the 1980s there has been a steady shift from West to East in the international system, economically, politically and culturally. Emerging markets in Asia have moved up the value chain of industrial production processes, while the share of Western industrialized countries in global gross domestic product has declined. Countries such as China and India are asserting themselves in security matters and seeking new avenues for investment flows and development co-operation. China's expected shift from export-led growth to domestic consumption might further change patterns of trade and capital flows, and it is an open debate whether the growth dynamics of India might outstrip those of China. While the rise of China and other Asian powers has been studied extensively, much less

work has been done on how Africa and Latin America position themselves in this process. What will the role be of Africa and Latin America in the 'Asian Century' and associated reconfigurations of global value chains? Will these regions be able to assert themselves and find a voice of their own? Will they manage to develop industries of their own and diversify trade relations? Will they launch new ways of regional south-south co-operation? What is the role of migrant communities and cultural exchange? Do Western and Asian approaches to these regions differ (Washington vs. Beijing consensus)? This book brings together renowned academics from Africa, Latin America, Europe and the USA, who bring refreshing perspectives on an under-researched topic, ranging from a conceptualization of the issue within new theoretical approaches, to unique case studies based on field work.

Maps play an indispensable role in indigenous peoples' efforts to secure land rights in the Americas and beyond. Yet indigenous peoples did not invent participatory mapping techniques on their own; they appropriated them from techniques developed for colonial rule and counterinsurgency campaigns, and refined by anthropologists and geographers. Through a series of historical and contemporary examples from Nicaragua, Canada, and Mexico, this book explores the tension between military applications of participatory mapping and its use for political mobilization and advocacy. The authors analyze the emergence of indigenous territories as spaces defined by a collective way of life--and as a particular kind of battleground.

Second-rank cities are back on the academic scene, capturing the

interest of scholars with their unexpected recent performance with respect to first-rank cities. Looking at the data on average urban GDP growth in 139 European cities since 1996, the relatively strong position of large cities (over 1.5 million inhabitants) on national growth coincides with the periods of fastest expansion, while at times of slowdown second-rank cities prevail. Especially in the recent period of economic downturn, second-rank cities have recorded annual GDP growth rates much less negative than those of capital cities; and in some European countries, like Austria and Germany, all cities have outperformed their capitals. In explaining this phenomenon, linking urban dynamics to agglomeration theories seems the most interesting approach. However, merely to link agglomeration economies to urban size in order to interpret urban performance is neither convincing nor sufficient, and it calls for additional investigation into how agglomeration economies work.

This volume claims that interpretation of the current dynamics in European urban systems – especially in the western part of Europe – would benefit from exploitation of the traditional concept of agglomeration economies. However, necessary for this purpose are more in-depth considerations on the nature, scope, intensity, and causes of agglomeration economies which do not relate their existence solely to urban size. And this is where the main challenge for scholars lies, in the interpretation of the missing link between agglomeration economies and urban dynamics. This book was originally published as a special issue of European Planning Studies.

The collapse of the Soviet Union has had profound and long-lasting impacts on the societies of Eastern Europe, the South Caucasus and Central Asia, impacts which are not yet fully worked through: changes in state-society relations, a comprehensive reconfiguration of political, economic and social ties, the resurgence of regional conflicts "frozen" during the Soviet period, and new migration patterns both towards Russia

and the European Union. At the same time the EU has emerged as an important player in the region, formulating its European Neighbourhood Policy, and engaging neighbouring states in a process of cross-border regional co-operation. This book explores a wide range of complex and contested questions related to borders, security and migration in the emerging "European Neighbourhood" which includes countries of the Caucasus and Central Asia as well as the countries which immediately border the EU. Issues discussed include new forms of regional and cross-border co-operation, new patterns of migration, and the potential role of the EU as a stabilizing external force.

In *The Plausible World*, the intersections of literature and cartography enable readers to understand that place is anything but purely geographic: a plausible world is created as a strategy to fill the void. Innovative in his approach, Westphal challenges the view that perceptions and representations of space are stable or straightforward.

"Superb! How refreshing to see a Handbook that eschews convention and explores the richness and diversity of the geographical imagination in such stimulating and challenging ways." - Peter Dicken, University of Manchester "Stands out as an innovative and exciting contribution that exceeds the genre." - Sallie A. Marston, University of Arizona "Captures wonderfully the richness and complexity of the worlds that human beings inhabit... This is a stand-out among handbooks!" - Lily Kong, National University of Singapore "This wonderfully unconventional book demonstrates human geography's character and significance not by marching through traditional themes, but by presenting a set of geographical essays on basic ideas, practices, and concerns." - Alexander B. Murphy, University of Oregon "This SAGE Handbook stands out for its capacity to provoke the reader to think anew about human geography ... essays that offer some profoundly original insights into what it means to engage geographically with the world." - Eric Sheppard, UCLA Published in association with the journal *Progress in Human Geography*, edited and written by the principal scholars in the discipline,

this Handbook demonstrates the difference that thinking about the world geographically makes. Each section considers how human geography shapes the world, interrogates it, and intervenes in it. It includes a major retrospective and prospective introductory essay, with three substantive sections on: Imagining Human Geographies Practising Human Geographies Living Human Geographies The Handbook also has an innovative multimedia component of conversations about key issues in human geography – as well as an overview of human geography from the Editors. A key reference for any scholar interested in questions about what difference it makes to think spatially or geographically about the world, this Handbook is a rich and textured statement about the geographical imagination.

This book brings together recent papers which make important contributions to understanding and developing primary geography. It considers primary teachers' and trainee teachers' knowledge of geography; how the primary curriculum uses geography; teachers' planning of geography teaching; the way in which aspects of geography are taught; what high quality geography might look like; and children's geographical understanding and voices. Though geography curricula change quite often in countries around the world, the core matters noted above remain of constant and vital importance. The papers in this book either concern research with primary teachers and children, or consider key concerns in primary geography, providing important perspectives for thinking about future developments in geography teaching and curriculum initiatives in primary schools. This is a stimulating and enticing collection written by leading exponents of, and experts in, primary geography education. This book was originally published as a special issue of Education 3-13.
