

When people should go to the ebook stores, search opening by shop, shelf by shelf, it is in point of fact problematic. This is why we provide the book compilations in this website. It will unconditionally ease you to see guide Geography Paper 1 2014 Narch as you such as.

By searching the title, publisher, or authors of guide you truly want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be all best area within net connections. If you direct to download and install the Geography Paper 1 2014 Narch, it is unquestionably simple then, since currently we extend the belong to to buy and make bargains to download and install Geography Paper 1 2014 Narch as a result simple!

Shifting Power in Asia-Pacific? Routledge

The analysis of urban development of the past twenty years presented in this maiden edition of the World Cities Report shows, with compelling evidence, that there are new forms of collaboration and cooperation, planning, governance, finance and learning that can sustain positive change. The Report unequivocally demonstrates that the current urbanization model is unsustainable in many respects. It conveys a clear message that the pattern of urbanization needs to change in order to better respond to the challenges of our time, to address issues such as inequality, climate change, informality, insecurity, and the unsustainable forms of urban expansion.

The Making of Geography as a Secondary School Subject MIT Press

New Zealand is widely regarded as a leader in public policy and governance reforms and innovations, being an early adopted of New Public Management, a leader in e-government and transparency. Discussing reforms including those in policy areas such as well-being, sustainability, environmental management, agriculture and indigenous development.

Media Activism in the Digital Age John Wiley & Sons

Which public and whose space? The understanding of public space as an arena where individuals can claim full use and access hides a reality of constant negotiation, conflict and surveillance. This collection uses case studies concerning the management, use, and transgression of public space to invite reflection on the way in which everyday social interaction is framed and shaped by the physical environment and vice versa. International experts from fields including geography, criminology, sociology and urban studies come together to debate the concepts of order and conflict in public space. This book is divided into two parts: spaces of control, and spaces of transgression. Section I focuses on formal and informal surveillance and the politics of control, using case studies to compare strategies in spaces including Olympic cities, luxury skyscrapers, residential neighbourhoods and shopping malls. Section II focuses on transgressive or deviant behaviour in public spaces, with case studies examining behaviour in nightlife districts, governance of homelessness, boy-racer culture and abortion protests. The epilogue concludes the book with an exploration of possible future avenues for research on public space, and a critical appraisal of the concept of public space itself. This interdisciplinary collection will be of interest to students, researchers and professionals in the areas of criminology, sociology, surveillance studies, human and social geography, and urban studies and planning.

World Cities Report 2016 Springer

America is poised to lead the 21st Century, as it led the 20th. That will happen because the country is at a tipping point in the battle for its own renewal, a renewal that will allow America to be exceptional again. Our economy is on the move, fueled by revolutions in energy, immigration, innovation, big data and advanced manufacturing. America's energy independence has set off shockwaves. Just as important are the social transformations that are making the country ever more racially and culturally diverse, younger, a home to immigrants, and the metropolitan centers that foster a rising economic and cultural dynamism. While most other countries struggle profoundly with immigration and religious and racial differences, America's on a path to multicultural identity. Those revolutions in the economy, society and culture and are also producing a new American majority that embraces new values and new politics. Republicans are waging a counter-revolution and that is why America looks gridlocked and why the country is turning to Democrats to take on the country's growing challenges. The economic and social transformations leave people struggling to earn enough and reach the middle class. Families are under stress. Government is corrupted by big money.

The American public is demanding the country address the dark side of our progress - and reforms are starting to happen. That is why Democrats will get to lead an era of reform and renewal comparable to the progressive era that mitigated the excesses of the Industrial Revolution. In this incisive book, expert strategist Greenberg draws on years of research and polling to illuminate how America is far from being gridlocked and he articulates a powerful vision of how American politics and America can be renewed.

Handbook on Geographies of Technology Routledge

This edited collection explores the boundaries between political and financial geographies, focusing on the linkages between the changing strategies, policies and institutions of the state. It also investigates banks and other financial institutions affected by both state policies and a globalizing financial system, and the financial resources available to firms as well as households. In so doing, the book highlights how an empirical focus on the semi-periphery of the financial system may generate new perspectives on the entanglement between (geo) politics and finance.

Analysing Kazakhstan's Foreign Policy Geofinance between Political and Financial Geographies

This book explores the intersection of geographical knowledge and artistic research in terms of both creative methods and practice-based research. In doing so it brings together geography's 'creative turn' with the art world's 'research turn.' Based on a decade and a half of ethnographic stories of working at the intersection of creative arts practices and geographical research, this book offers a much-needed critical account of these forms of knowledge production. Adopting a geohumanities approach to investigating how these forms of knowledge are produced, consumed, and circulated, it queries what imaginaries and practices of the key sites of knowledge making (including the field, the artist's studio, the PhD thesis, and the exhibition) emerge and how these might challenge existing understandings of these locations. Inspired by the geographies of science and knowledge, art history and theory, and accounts of working within and beyond disciplines, this book seeks to understand the geographies of research at the intersection of geography and creative arts practices, how these geographies challenge existing understandings of these disciplines and practices, and what they might contribute to our wider discussions of working beyond disciplines, including through artistic research. This book offers a timely contribution to the emerging fields of artistic research and geohumanities, and will appeal to undergraduate and postgraduate students and researchers.

China's Policy towards the South China Sea Taylor & Francis

Learning Primary Geography: Ideas and inspiration from classrooms celebrates children's learning in primary geography. It is a book for all student and practising teachers who would like children to learn about their world in an enjoyable and stimulating way. Every page presents inspiring examples of children's learning, and explains how and why creative approaches such as enquiry learning, learning outside the classroom, and using imaginative resources work so well in primary geography. Using illustrated case studies from a range of schools and classrooms, each chapter showcases the fantastic work all children can do in primary geography. The book explores a wide variety of geographical learning, with chapters focusing on key aspects of the subject, including: primary geography through the school grounds topical geography through issues and events learning about places in primary geography

children's agency and action through primary geography Throughout the chapters, the role of primary geography in helping children develop all types of literacies, including spatial, critical and digital literacies, is explored. Written by a highly experienced teacher and lecturer in education, Learning Primary Geography is underpinned and illustrated by examples from a wide range of primary classrooms. It will be a source of support, guidance and inspiration for all those teaching geography in the primary school.

Human Geography Anchor Academic Publishing

No work has ever been produced previously that shows how historically geography has been constructed as a subject for the senior years of secondary schooling in Western Australia from 1917 to 1997. In doing so, this book contributes to the existing corpus of international research on the history of curriculum and particularly the history of geography as a senior secondary school subject. Much of it is based on primary sources, including the textbooks and atlases used, along with syllabus manuals and geography examination papers. It also provides a framework for investigating the construction of senior secondary school geography curricula in other constituencies, and could act as a model for engaging in further research in curriculum history for other school subjects state-wide, nationally and internationally. The book also makes an important contribution to the fields of curriculum design, curriculum development and curriculum innovation. It will be of great interest to historians of education, comparative educationists, education leaders, policy makers and librarians.

Beyond Control Edward Elgar Publishing

This book covers several dimensions of disaster studies as an emerging discipline. It is the inaugural book in the series 'Disaster Studies and Management' and deals with questions such as "Is disaster management a field of practice, a profession, or simply a new area of study?" Exploring intersectionalities, the book also examines areas of research that could help enhance the discourse on disaster management from policy and practice perspectives, revisiting conventional event-centric approaches, which are the basis for most writings on the subject. Several case studies and comparative analyses reflect a critical reading of research and practice concerning disasters and their management. The book offers valuable insights into various subjects including the challenge of establishing inter- and multi-disciplinary teams within the academia involved in disaster studies, and sociological and anthropological readings of post-disaster memoryscapes. Each of the contributors has an enduring interest in disaster studies, thus enriching the book immensely. This book will be of interest to all the students and scholars of disaster studies and disaster management, as well as to practitioners and policymakers.

Springer Nature

Following drastic shifts in the spatial organization of goods production, increasingly fierce competition now forces firms also to look critically at how to organize the production of services. While digitization and advances in information and communication technologies have enabled firms to unbundle service production processes, the increased global availability of skilled labour allows for the relocation of ever more of these processes around the world. As a result, a new geography of services production takes shape: a geography that is defined by new interregional and

international divisions of labour and held together by increasingly complex global services production networks. This book examines how the reorganisation of services production alters relations between and generates different sets of challenges and opportunities for economic development in the Global North and the Global South. Drawing from 11 case studies probing various aspects of services production in different parts of the world, the book brings out the remarkable heterogeneity and transformative capacities of services. It successively shows how global trade in services creates new interdependencies between services producing and services consuming regions; reveals how services help to mitigate the impact of and contribute to recovery from economic crises in the Global North; and demonstrates how services offshoring fosters economic development and service-sector driven modernisation processes in the Global South. The book's openness to the heterogeneous and dynamic nature of services production enlarges our understanding of which particular services in which spatiotemporal context have the capacity to generate good jobs, contribute to productivity and drive economic growth. The book stands out from other books in the field in that it combines perspectives on services-driven transformations from both the Global North and the Global South and looks into the role of various services segments. Based on pioneering empirical research and original data it offers a timely contribution to this growing debate. The book provides valuable insights for students, scholars and professionals interested in services, services offshoring, services-driven growth, and socioeconomic transformations in the Global North and South.

Handbook of Behavioral and Cognitive Geography Edward Elgar Publishing

Beyond Control reveals the Mississippi as a waterway of change, unnaturally confined by ever-larger levees and control structures. During the great flood of 1973, the current scoured a hole beneath the main structure near Baton Rouge and enlarged a pre-existing football-field-size crater. That night the Mississippi River nearly changed its course for a shorter and steeper path to the sea. Such a map-changing reconfiguration of the country's largest river would bear national significance as well as disastrous consequences for New Orleans and towns like Morgan City, at the mouth of the Atchafalaya River. Since 1973, the US Army Corps of Engineers Control Complex at Old River has kept the Mississippi from jumping out of its historic channel and plunging through the Atchafalaya Basin to the Gulf of Mexico. Beyond Control traces the history of this phenomenon, beginning with a major channel shift around 3,000 years ago. By the time European colonists began to explore the Lower Mississippi Valley, a unique confluence of waterways had formed where the Red River joined the Mississippi, and the Atchafalaya River flowed out into the Atchafalaya Basin. A series of human alterations to this potentially volatile web of rivers, starting with a bend cutoff in 1831 by Captain Henry Miller Shreve, set the forces in motion for the Mississippi's move into the Atchafalaya Basin. Told against the backdrop of the Lower Mississippi River's impending diversion, the book's chapters chronicle historic floods, rising flood crests, a changing strategy for flood protection, and competing interests in the management of the Old River outlet. Beyond Control is both a history and a close look at an inexorable, living process happening now in the twenty-first century.

Atlas of Knowledge Routledge

This book provides an explanation of Chinese policy towards the South China Sea, and argues that this has been sculpted by the changing dynamics of the law of the sea in conjunction with regional geopolitical flux. The past few decades have witnessed a bifurcated trend in China's management of territorial disputes. Over the years, while China gradually

calmed and settled most land-border disputes with its neighbors, disputes on the ocean frontier continued to simmer in a seething cauldron. China's Policy towards the South China Sea attributes the distinctive path of China's approach to maritime disputes to a unique factor - the law of the sea (LOS) as the "rules of the road" in the ocean. By deconstructing the concept of "sovereignty" and treating the LOS as an evolving regime, the book examines how the changing dynamics of the LOS regime have complicated and reshaped the nature and content of sovereign disputes in the ocean regime as well as the options of settlement. Applying the findings to the South China Sea case, the author traces the learning curve on which China has embarked to comprehend the complexity of the dispute accordingly and finds that it is the dynamic interaction of the law of the sea regime and the geopolitical conditions that has driven the evolution of China's South China Sea policy. This book will be of great interest to students of Chinese and Asian politics, international law, international relations and security studies.

Creating Enemies Routledge

This Handbook presents methods to advance the understanding of interdependencies between the well-being of human societies and the performance of their biophysical environment. It showcases applications to material and energy use; urbanization and tech

China-Taiwan Rapprochement SAGE

This book seeks to bring together different philosophical, theoretical, and methodological approaches to the study of human mobility within the discipline of geography. With five thematic sections - conceptualizing and analyzing mobility, inequalities of mobility, politics of mobility, decentering mobility, and qualifying abstraction - and 27 substantive chapters by leading researchers in the field, it provides a comprehensive overview of the latest thinking about human mobility and related issues. The contributors discuss mobility issues as diverse as everyday mobilities of young people, migrants and refugees, and sex workers; the relationships between citizenship and mobility; and the potential and pitfalls of big data for understanding mobility. This, coupled with a broad international focus, means that Geographies of Mobility will not only encourage and enrich dialogue on a theme that is of major importance to varied geographic research communities, but will also be of great interest to students and researchers across the wider social sciences. This book was originally published as a special issue of Annals of the American Association of Geographers.

Critical Geopolitics of the Polar Regions Edward Elgar Publishing

This comprehensive Handbook summarizes existing work and presents new concepts and empirical results from leading scholars in the multidisciplinary field of behavioral and cognitive geography, the study of the human mind, and activity in and concerning space, place, and environment. It provides the broadest and most inclusive coverage of the field so far, including work relevant to human geography, cartography, and geographic information science.

Disaster Studies Edward Elgar Publishing

Protected areas are at the centre of nature-based tourism, which is increasingly popular across the world. As visitor numbers increase, so does awareness of the harmful effects that large crowds may have on both natural resources and individuals' recreational experience. This volume considers the challenge of transportation to and within natural and protected areas, the improvement of which has already been recognised as having great potential for mitigating the environmental impacts of ecotourism. While several books have focused considerable attention to the management of protected areas in general, little has been said about the specific issue of sustainable transport, an emerging trend that is already reshaping visitation patterns in natural settings. This book provides current knowledge on issues associated with the transportation of visitors in natural and protected areas,

and a comprehensive overview of the technical and strategic options available to tackle these issues. It approaches the subject via three main topics: preferences, or the visitors' attitudes towards transportation; practices, where current approaches are assessed through examples and case-studies of successful experiences and methodologies from around the world; and policies, where suggestions and recommendations are put forward for both local scale strategies and broad-scale regulatory action with global relevance. Contributors include academics in the field of natural resource management and tourism, with extensive experience in protected area management and active partnerships with natural park administrations.

Geographies of Mobility Taylor & Francis

The African Economic Outlook 2015 analyses Africa's growing role in the world economy and predicts the continent's two-year prospects in crucial areas: macroeconomics, financing, trade policies and regional integration, human development, and governance.

African Economic Outlook 2015 Regional Development and Spatial Inclusion Routledge

Geofinance between Political and Financial Geographies Edward Elgar Publishing

Handbook of Research methods and Applications in Environmental Studies Univ. Press of Mississippi

This volume brings together a selection of papers proposed for the Proceedings of the 42nd Computer Applications and Quantitative Methods in Archaeology conference (CAA), hosted at Paris 1 Pantheon-Sorbonne University from 22nd to 25th April 2014.

The Great Music City Springer Nature

This book examines how since about 2008 the economy of Taiwan has become ever more deeply integrated into the economy of China. It goes beyond a consideration of trade and investment flows, and discusses also the large population flows, the growing integration of the two financial systems and the nature of the deep economic integration at the industry and firm level. It considers the impact of growing economic integration on society and politics, assesses how China-Taiwan economic integration is affecting the East Asian region more widely, and explores the implications for international relations, including the United States dominance in the region. Overall, the book presents a comprehensive analysis of all the issues.
