Phase Media Edward Elgar Publishing
In *Phase Media*, James Ash theorizes how smart objects, understood as Internet-connected and sensor-enabled devices, are altering users' experience of their environment. Rather than networks connected by lines of transmission, smart objects generate phases, understood as space-times that modulate the spatio-

temporal intelligibility of both humans and non-humans. Examining a range of objects and services from the Apple Watch to Nest Cam to Uber, Ash suggests that the modulation of spatio-temporal intelligibility is partly shaped by the commercial logics of the industries that design and manufacture smart objects, but can also exceed them. Drawing upon the work of Martin Heidegger, Gilbert Simondon and Bruno Latour, Ash argues that smart objects have their own phase politics, which offer opportunities for new forms of public to emerge. *Phase Media* develops a conceptual vocabulary to contend that smart objects do more than just enabling a world of increased corporate control and surveillance, as they also provide the tools

to expose and re-order the very logics and procedures that created them.
Learning Primary Geography Edward Elgar Publishing
The aim of this timely work, which appears in the wake of the worst global financial crisis since the late 1920s, is to bring together high quality research-based contributions from leading international scholars involved in constructing a geographical perspective on money. Topics covered include the crisis, the spatial circuits of finance, regulation, mainstream financial markets (banking, equity, etc), through to the various 'alternative' and 'disruptive' forms of money that have arisen in recent years. It will be of interest

to geographers, political scientists, sociologists, economists, planners and all those interested in how money shapes and reshapes socio-economic space and conditions local and regional development. Decolonising Geography? Disciplinary Histories and the End of the British Empire in Africa, 1948-1998 Cornell University Press

This book covers several dimensions of disaster studies as an emerging discipline. It is the inaugural book in the series 'Disaster Studies and Management' and deals with questions such as "Is disaster management a field of practice, a profession, or simply a new area of study?" Exploring intersectionalities, the book also examines areas of research that could help enhance the discourse on disaster management from policy and practice perspectives, revisiting conventional event-centric approaches, which are the basis for most writings on the subject. Several case studies and comparative analyses reflect a critical reading of research and practice concerning disasters and their management. The book offers valuable insights into various subjects

including the challenge of establishing inter- and multi-disciplinary teams within the academia involved in disaster studies, and sociological and anthropological readings of post-disaster memoryscapes. Each of the contributors has an enduring interest in disaster studies, thus enriching the book immensely. This book will be of interest to all the students and scholars of disaster studies and disaster management, as well as to practitioners and policymakers.

The Confines of Territory

With a focus on lifelong learning, this book examines the shifts that UNESCO's educational concepts have undergone in reaction to historical pressures and dilemmas since the founding of the organization in 1945. The tensions between UNESCO's humanistic worldview and the pressures placed on the organization have forced UNESCO to depart from its utopian vision of lifelong learning, while still

claiming continuity. Elfert interprets the history of lifelong learning in UNESCO as part of a much bigger story of a struggle of ideologies between a humanistic-emancipatory and an economic-technocratic worldview. With a close study of UNESCO's two education flagship reports, the Faure and Delors reports, Elfert sheds light on the global impact of UNESCO's professed humanistic goals and its shifting influence on lifelong learning around the world.

In the devastation that follows a major disaster, there is a need for multiple sectors to unite and devote new resources to support the rebuilding of infrastructure, the provision of health and social services, the restoration of care delivery systems, and other critical recovery needs. In some cases, billions of dollars from public, private and charitable sources are invested to help communities recover. National rhetoric often characterizes these efforts as a "return to normal." But for many American communities, pre-disaster conditions are far from optimal. Large

segments of the U.S. population suffer from preventable health problems, experience inequitable access to services, and rely on overburdened health systems. A return to pre-event conditions in such cases may be short-sighted given the high costs - both economic and social - of poor health. Instead, it is important to understand that the disaster recovery process offers a series of unique and valuable opportunities to improve on the status quo. Capitalizing on these opportunities can advance the long-term health, resilience, and sustainability of communities - thereby better preparing them for future challenges. *Healthy, Resilient, and Sustainable Communities After Disasters* identifies and recommends recovery practices and novel programs most likely to impact overall community public health and contribute to resiliency for future incidents. This book makes the case that disaster recovery should be guided by a healthy community vision, where health considerations are integrated into all aspects of recovery planning before and after a disaster, and funding streams are leveraged in a coordinated manner and applied to health improvement priorities in order to meet human recovery needs and create healthy built and natural environments. The conceptual framework presented in *Healthy, Resilient, and Sustainable Communities After Disasters* lays the groundwork to achieve this goal and provides operational guidance for multiple sectors involved in community planning and disaster recovery. *Healthy, Resilient, and Sustainable Communities After Disasters* calls for actions at multiple levels to facilitate recovery strategies that

optimize community health. With a shared healthy community vision, strategic planning that prioritizes health, and coordinated implementation, disaster recovery can result in a communities that are healthier, more livable places for current and future generations to grow and thrive - communities that are better prepared for future adversities.

Coup Taylor & Francis

This comprehensive handbook, prepared by leading ocean policy academics and practitioners from around the world, presents in-depth analyses of the experiences of fifteen developed and developing nations and four key regions of the world that have taken concrete steps toward cross-cutting and integrated national and regional ocean policy. All chapters follow a common framework for policy analysis. While most coastal nations of the world already have a variety of sectoral policies in place to manage different uses of the ocean (such as shipping, fishing, oil and gas development), in the last two decades, the coastal nations covered in the book have undertaken concerted efforts to articulate and implement an integrated, ecosystem-based vision for the governance of ocean areas under their jurisdiction. This includes goals and procedures to harmonize existing uses and laws, to foster sustainable

development of ocean areas, to protect biodiversity and vulnerable resources and ecosystems, and to coordinate the actions of the many government agencies that are typically involved in oceans affairs. The book highlights the serious conflicts of use in most national ocean zones and the varying attempts by nations to follow the prescriptions emanating from the 1982 UN Law of the Sea Convention and the outcomes of the 1992, 2002, and 2012 sustainable development summits. The interrelationship among uses and processes in the coast and ocean requires that ocean governance be integrated, precautionary, and anticipatory. Overall, the book provides a definitive state-of-the-art review and analysis of national and regional ocean policies around the world.

Handbook for Teaching and Learning in Geography Springer

This book is the first legal geography book to explicitly engage in method. It complements this by also bringing together different perspectives on the emerging school of legal geography. It explores human – environment interactions and showcases distinct environmental legal geography scholarship. *Legal Geography: Perspectives and Methods* is an innovative book concerned with a new relational and material

way of examining our legal-spatial world. With chapters examining natural resource management, Indigenous knowledge and political ecology scholarship, the text introduces legal geography's modes of analysis and critique. The book explores topics such as Indigenous environmental rights, the impacts of extractive industries, mediation of climate change, food, animal and plant patents, fossil fuels, mining and coastal environments based on empirical, jurisdictional and methodological insights from Australia, New Zealand and the Asia-Pacific to demonstrate how space and place are invoked in legal processes and contestations, and the methods that may be employed to explore these processes and contestations. This book examines the role of legal geographies in the 21st century beyond the simple "law in action", and it will thus appeal to students of socio-legal studies, human geography, environmental studies, environmental policy, as well as politics and international relations.

Atlas of Knowledge Routledge

The Wiley Blackwell Companion to Political Geography aims to account for the intellectual and worldly developments that have taken place in and around political geography in the last 10 years. Bringing together established names in the field as well as new scholars, it highlights provocative theoretical and conceptual debates on political geography from a range of global perspectives.

Discusses the latest developments and places increased emphasis on modes of thinking, contested key concepts, and on geopolitics, climate change and terrorism Explores the influence of the practice-based methods in geography and concepts including postcolonialism, feminist geographies, the notion of the Anthropocene, and new understandings of the role of non-human actors in networks of power Offers an accessible introduction to political geography for those in allied fields including political science, international relations, and sociology Sustainable Transportation in Natural and Protected Areas Routledge

This exemplary Handbook provides readers with a novel synthesis of international research, evidence-based practice and personal reflections to offer an overview of the current state of knowledge in the field of teaching geography in higher education. Chapters cover the three key transitions – into, through, and out of higher education – to present a thorough analysis of the topic.

DECOLONISING GEOGRAPHY? "This book presents an extraordinarily sensitive account of geography's histories in five African countries subjected to British colonial rule. Craggs and Neate draw together political and imaginative processes of decolonisation, through an innovative biographical approach that humanizes and enlivens the story of our academic discipline.

It will be an invaluable resource for those seeking a deeper understanding of decolonisation, its recent trajectories and far-reaching implications, on the African continent." —Shari Daya, Affiliate Associate Professor in Environmental and Geographical Science, University of Cape Town "By placing the experiences, ideas, and practices of African geographers in the center of their analyses, Craggs and Neate provide an unprecedented account of historical and contemporary decolonizing struggles within Geography and the academy. This book should be required reading for all those looking to decolonize the discipline and dislodge it from its Global North histories, institutions, and ideologies." —Mona Domosh, Professor of Geography, The Joan P. and Edward J. Foley Jr. 1933 Professor, Dartmouth College "This meticulous work explores how colonialism, decolonization and postcolonialism shaped African geography and geographers. It sheds light on efforts to 'Africanize' the discipline, a process which I was both witness to and a participant in." —Stanley Okafor, Professor of Geography (Retired), University of Ibadan How did a generation of academic

geographers engage with constitutional decolonisation during the end of the British empire in Africa? In *Decolonising Geography? Disciplinary Histories and the End of the British Empire in Africa, 1948-1998*, Ruth Craggs and Hannah Neate explore how the teaching, research, administration and activism of geographers in Africa shaped the discipline and the post-colonial geopolitics of the continent. The authors follow the professional lives of individual geographers to provide fresh insights into decolonisation in the former British Empire in Africa, drawing from extensive archival research and more than 40 oral history interviews with geographers in Ghana, Nigeria, South Africa, Tanzania and the UK. *Decolonising Geography* is a must-read for any reader in the UK and Africa with an interest in the relationships between geography and decolonisation.

Local and Regional Development Routledge
The word 'territory' has taken on renewed significance in a world where its close association with state sovereignty has made a serious comeback, invoked alike by proponents of Brexit in the UK, 'Making America Great Again' in the USA, and myriad populists from India to Brazil by way of Italy and Hungary. The word has had a contentious

history in social science and political theory. In its first science.

seven years, the journal *Territory, Politics, Governance* has published numerous articles examining the ways in which territory figures into contemporary political debates and its limits as a concept when applied to a world in which sovereignty never has simply pooled up within self-evidently distinctive blocs of space named as 'territories.' Among other things, the limits of territory are apparent in terms of the history of a global capitalism that always bursts beyond established boundaries, the fact that some states are much more powerful and exercise much more spatial reach than do others, and that the political uses of territory in its current usage date back predominantly to seventeenth century Europe rather than being historically transcendental or worldwide. The articles in this book are selected from *Territory, Politics, Governance* to survey many of the dilemmas and questions that haunt the concept of territory even as its current efflorescence in political discourse ignores them.

Geofinance between Political and Financial Geographies Springer

In three dramatic weeks in October and November 2019, the fourteen years of progressive change that Evo Morales' pink tide government had worked to implement in Bolivia and beyond came to a screeching halt. President Morales was forced to resign after protests against his re-election to a fourth term in allegedly fraudulent elections erupted among the urban middle classes, anti-indigenous racists, and prominent conservative politicians. The country's far right used the ensuing crisis to orchestrate a successful coup, with military and police backing, paving the way for a repressive "transition" government led by Jeanine Áñez to take power. The Áñez government quelled popular protests with lethal force, shut down critical media outlets, and targeted members of Morales' political party, the Movimiento al Socialismo (MAS). Despite postponing elections three times, the Áñez government was eventually forced to call elections in October 2020. The MAS swept back into power, winning elections with 55% of the vote and returning democracy to the country. This book tells the story of this year of upheaval in Bolivia, providing a critical analysis of the 14 years of the MAS government that preceded it as well as the MAS return to power in 2020. It includes personal stories and commentary from women and men on the streets, leaders in social movements, members of the MAS party and government, survivors of Áñez's abuses, and intellectuals.

Order and Conflict in Public Space Taylor & Francis

Since the 1980s, transitional justice mechanisms have been increasingly applied to account for mass atrocities and grave human rights violations throughout the world. Over time, post-conflict justice practices have expanded across continents and state borders and have fueled the creation of new ideas that go beyond traditional notions of amnesty, retribution, and reconciliation. Gathering work from contributors in international law, political science, sociology, and history, *New Critical Spaces in Transitional Justice* addresses issues of space and time in transitional justice studies. It explains new trends in responses to post-conflict and post-authoritarian nations and offers original empirical research to help define the field for the future.

Global sports events are rarely far from the public eye. Such mega-events are about much more than the sporting competitions themselves. They entail global exposure and intense struggles by different stakeholders. This is the first book to examine sports mega-events from a mobilities perspective. It analyses the 'mobile construction' of

global sports mega-events and the role this plays in managing labour, imaginaries, policies and legacies. In particular, the book focuses on the tension between the various mobilities and immobilities that are implied in the process of constructing a mega-event. It seeks to uncover the ways in which an event is a series of fluid interactions that occur sequentially and simultaneously at multiple scales in diverse spheres of interaction. Contributions explore the dynamics through which mega-events occur, revealing the textures and nuance of the complex systems that sustain them, and the ways that events ramify throughout the international system. *Critical Geopolitics of the Polar Regions* Springer Nature
From bank bailouts to austerity, Europe's and Ireland's response to the economic crisis has been engineered specifically to shift the burden of paying for the crisis onto ordinary citizens while investors, financiers, bankers and the privileged are protected. The authors expose the class-based nature of Ireland's crisis resolution. *Minerals Yearbook* Edward Elgar Publishing
Actors and institutions in localities and regions across the world are seeking prosperity and well-being amidst tumultuous and disruptive shifts and transitions generated by: an increasingly globalised, knowledge-intensive capitalism; global financial

instability, volatility and crisis; concerns about economic, social and ecological sustainability, climate change and resource shortages; new multi-actor and multi-level systems of government and governance and a re-ordering of the international political economy; state austerity and retrenchment; and, new and reformed approaches to intervention, policy and institutions for local and regional development. *Local and Regional Development* provides an accessible, critical and integrated examination of local and regional development theory, institutions and policy in this changing context. Amidst its rising importance, the book addresses the fundamental issues of ‘ what kind of local and regional development and for whom? ’, its purposes, principles and values, frameworks of understanding, approaches and interventions, and integrated approaches to local and regional development throughout the world. The approach provides a theoretically informed, critical analysis of contemporary local and regional development in an international and multi-disciplinary context, grounded in concrete empirical analysis from experiences in the global North and South. It concludes by identifying what might constitute holistic, inclusive, progressive and sustainable local and regional development, and reflecting upon its limits and political renewal.

New Critical Spaces in Transitional Justice John Wiley & Sons

This edited collection explores the boundaries between political and financial geographies,

focusing on the linkages between the changing strategies, policies and institutions of the state. It also investigates banks and other financial institutions affected by both state policies and a globalizing financial system, and the financial resources available to firms as well as households. In so doing, the book highlights how an empirical focus on the semi-periphery of the financial system may generate new perspectives on the entanglement between (geo) politics and finance. *Neighbourhood Perceptions of the Ukraine Crisis* Elsevier

Focusing on both Polar Regions, this book provides a comprehensive understanding of political processes related to the rapidly changing Arctic and Antarctic, where the environmental impacts of human activities are extremely visible. Environmental changes in the Arctic and the Antarctic are increasingly seen as barometers of the global impact of human activities, while newly arising economic opportunities in both Polar Regions prompt predictions that they will be the site of future conflicts. This book maps and analyses the different actors involved in the politics of the Polar Regions to explain why similar patterns of interpretation of such major issues have become dominant in practical, popular and formal geopolitical discourses. Disentangling the politics, the author illustrates how the ordering principles have evolved, explains recent dynamics in political processes and provides the groundwork needed to better forecast future trends. By focusing on the Americas, the only continent that borders both Polar

Regions, the author shows how geographic proximity inspires interaction and cooperation among state and non-state actors in very different ways. This volume will be of interest to scholars and students of political science, political geography, international relations, global governance and cultural studies. It will have an international appeal particularly in the Americas, and other countries with growing interests in the Polar Regions.
