America is poised to lead the 21st Century, as it led the 20th. That will happen because the country is at a tipping point in the battle for its own renewal, a renewal that will allow America to be exceptional again. Our economy is on the move, fueled by revolutions in energy, immigration, innovation, big data and advanced manufacturing. America's energy independence has set off shockwaves. Just as important are the social transformations that are making the country ever more racially and culturally diverse, younger, a home to immigrants, and the metropolitan centers that foster a rising economic and cultural dynamism. While most other countries struggle profoundly with immigration and religious and racial differences, America's on a path to multicultural identity. Those revolutions in the economy, society and culture and are also producing a new American majority that embraces new values and new politics. Republicans are waging a counter-revolution and that is why America looks gridlocked and why the country is turning to Democrats to take on the country's growing challenges. The economic and social transformations leave people struggling to earn enough and reach the middle class. Families are under stress. Government is corrupted by big money. The American public is demanding the country address the dark side of our progress - and reforms are starting to happen. That is why Democrats will get to lead an era of reform and renewal comparable to the progressive era that mitigated the excesses of the Industrial Revolution. In this incisive book, expert strategist Greenberg draws on years of research and polling to illuminate how America is far from being gridlocked and he articulates a powerful vision of how American politics and America can be renewed.

Urban Flood Mitigation Strategies Using Geo Spatial Tools Routledge

This book is an initiative presented by the Commission on Geographical Education of the International Geographical Union. It focuses particularly on what has been learned from geospatial projects and research from the past decades of implementing geospatial technologies (GST) in formal and informal education. The objective of this publication is to inform an international audience of teachers, professionals, scholars, and policymakers about the state of the art and prospects of geospatial practices (GPs) as organized activities that use GST and lessons learned in relation to geographical education. GST make up an advanced body of knowledge developed by practitioners of geographic information systems (GIS), remote sensing (RS), global positioning systems, (GPS), and digital cartography (DC). GST have long been applied in many different sectors; however, their first use in higher education began in the early 1980s and then diffused to

secondary schools during the 1990s. Starting with GIS and RS, it evolved into a much broader context, as GST expanded to include GPS and DC with new communication technologies and Internet applications. GST have been used around the world as a combination of tools and special techniques to make research, teaching, and learning more effective.

Deepening Neoliberalism, Austerity, and Crisis Routledge

From bank bailouts to austerity, Europe's and Ireland's response to the economic crisis has been engineered specifically to shift the burden of paying for the crisis onto ordinary citizens while investors, financiers, bankers and the privileged are protected. The authors expose the class-based nature of Ireland's crisis resolution.

This edited collection explores the boundaries between political and financial geographies, focusing on the linkages between the changing strategies, policies and institutions of the state. It also investigates banks and other financial institutions affected by both state policies and a globalizing financial system, and the financial resources available to firms as well as households. In so doing, the book highlights how an empirical focus on the semi-periphery of the financial system may generate new perspectives on the entanglement between (geo) politics and finance.

How is it that nearly 90 percent of the Texan population currently lives in metropolitan regions, but many Texans still embrace and promote a vision of their state's nineteenth-century rural identity? This is one of the questions the editors and contributors to Lone Star Suburbs confront. One answer, they contend, may be the long shadow cast by a Texas myth that has served the dominant culture while marginalizing those on the fringes. Another may be the criticism suburbia has endured for undermining the very romantic individuality that the Texas myth celebrates. From the 1950s to the present, cultural critics have derided suburbs as landscapes of sameness and conformity. Only recently have historians begun to document the multidimensional industrial and ethnic aspects of suburban life as well as the development of multifamily housing, services, and leisure facilities. In Lone Star Suburbs, urban historian Paul J. P. Sandul, Texas historian M. Scott Sosebee, and ten contributors move the discussion of suburbia well beyond the stereotype of endless blocks of white middle-class neighborhoods and fill a gap in our knowledge of the Lone Star State. This collection supports the claim that Texas is not only primarily suburban but also the most representative example of this urban form in the United States. Essays consider transportation infrastructure, urban planning, and professional sports as they relate to the suburban ideal; the experiences of African Americans, Asian Americans, and Latinos in Texas metropolitan areas;

and the environmental consequences of suburbanization in the state. Texas is no longer the bastion of rural life in the United States but now—for better or worse—represents the leading edge of suburban living. This important book offers a first step in coming to grips with that reality.

The power of mapping: principles for visualizing knowledge, illustrated by many stunning large-scale, full-color maps. Maps of physical spaces locate us in the world and help us navigate unfamiliar routes. Maps of topical spaces help us visualize the extent and structure of our collective knowledge; they reveal bursts of activity, pathways of ideas, and borders that beg to be crossed. This book, from the author of *Atlas of Science*, describes the power of topical maps, providing readers with principles for visualizing knowledge and offering as examples forty large-scale and more than 100 small-scale full-color maps. Today, data literacy is becoming as important as language literacy. Well-designed visualizations can rescue us from a sea of data, helping us to make sense of information, connect ideas, and make better decisions in real time. In *Atlas of Knowledge*, leading visualization expert Katy Börner makes the case for a systems science approach to science and technology studies and explains different types and levels of analysis. Drawing on fifteen years of teaching and tool development, she introduces a theoretical framework meant to guide readers through user and task analysis; data preparation, analysis, and visualization; visualization deployment; and the interpretation of science maps. To exemplify the framework, the Atlas features striking and enlightening new maps from the popular “Places & Spaces: Mapping Science” exhibit that range from “Key Events in the Development of the Video Tape Recorder” to “Mobile Landscapes: Location Data from Cell Phones for Urban Analysis” to “Literary Empires: Mapping Temporal and Spatial Settings of Victorian Poetry” to “Seeing Standards: A Visualization of the Metadata Universe.” She also discusses the possible effect of science maps on the practice of science.

Coup Rowman & Littlefield

In three dramatic weeks in October and November 2019, the fourteen years of progressive change that Evo Morales’ pink tide government had worked to implement in Bolivia and beyond came to a screeching halt. President Morales was forced to resign after protests against his re-election to a fourth term in allegedly fraudulent elections erupted among the urban middle classes, anti-indigenous racists, and prominent conservative politicians. The country’s far right used the ensuing crisis to orchestrate a successful coup, with military and police backing, paving the way for a repressive “transition” government led by Jeanine Áñez to take power. The Áñez government quelled popular protests with lethal force, shut down critical media outlets, and targeted members of Morales’ political party, the Movimiento al Socialismo (MAS). Despite postponing elections three times, the Áñez government was eventually forced to call elections in October 2020. The MAS swept back into power, winning elections with 55% of the vote and returning democracy to the country. This book tells the story of this year of upheaval in Bolivia, providing a critical analysis of the 14 years of the MAS government that preceded it as well as the MAS return to power in 2020. It includes personal stories and commentary from women and men on the streets, leaders in social movements, members of the MAS party and government, survivors of Áñez’s abuses, and intellectuals.

Recent events in Ukraine and Russia and the subsequent incorporation of Crimea into the Russian state, with the support of some circles of inhabitants of the peninsula, have shown that the desire of people to belong to the Western part of Europe should not automatically be

assumed. Discussing different perceptions of the Ukrainian-Russian war in neighbouring countries, this book offers an analysis of the conflicts and issues connected with the shifting of the border regions of Russia and Ukraine to show how ‘material’ and ‘psychological’ borders are never completely stable ideas. The contributors – historians, sociologists, anthropologists and political scientists from across Europe – use an interdisciplinary and comparative approach to explore the different national and transnational perceptions of a possible future role for Russia.

Communication Convergence in Contemporary China Routledge

Actors and institutions in localities and regions across the world are seeking prosperity and well-being amidst tumultuous and disruptive shifts and transitions generated by: an increasingly globalised, knowledge-intensive capitalism; global financial instability, volatility and crisis; concerns about economic, social and ecological sustainability, climate change and resource shortages; new multi-actor and multi-level systems of government and governance and a re-ordering of the international political economy; state austerity and retrenchment; and, new and reformed approaches to intervention, policy and institutions for local and regional development. Local and Regional Development provides an accessible, critical and integrated examination of local and regional development theory, institutions and policy in this changing context. Amidst its rising importance, the book addresses the fundamental issues of ‘what kind of local and regional development and for whom?’, its purposes, principles and values, frameworks of understanding, approaches and interventions, and integrated approaches to local and regional development throughout the world. The approach provides a theoretically informed, critical analysis of contemporary local and regional development in an international and multi-disciplinary context, grounded in concrete empirical analysis from experiences in the global North and South. It concludes by identifying what might constitute holistic, inclusive, progressive and sustainable local and regional development, and reflecting upon its limits and political renewal.

The Confines of Territory Routledge

Focusing on both Polar Regions, this book provides a comprehensive understanding of political processes related to the rapidly changing Arctic and Antarctic, where the environmental impacts of human activities are extremely visible. Environmental changes in the Arctic and the Antarctic are increasingly seen as barometers of the global impact of human activities, while newly arising economic opportunities in both Polar Regions prompt predictions that they will be the site of future conflicts. This book maps and analyses the different actors involved in the politics of the Polar Regions to explain why similar patterns of interpretation of such major issues have become dominant in practical, popular and formal geopolitical discourses. Disentangling the politics, the author illustrates how the ordering principles have evolved, explains recent dynamics in political processes and provides the groundwork needed to better forecast future trends. By focusing on the Americas, the only continent that borders both Polar Regions, the author shows how geographic proximity inspires interaction and cooperation among state and non-state actors in very different ways. This volume will be of interest to scholars and students of political science, political

geography, international relations, global governance and cultural studies. It will have an international appeal particularly in the Americas, and other countries with growing interests in the Polar Regions.

Handbook of Research methods and Applications in Environmental Studies Routledge

The conflict in eastern Ukraine continues with little sign of a negotiated resolution. Crimea has been absorbed into the Russian Federation, and celebrates the third anniversary of its ' integration ' in March 2017. The ongoing nature of the conflict contrasts with a lack of academic exploration of the issues surrounding it. To date, most analyses have focused on the geopolitical implications of the Ukrainian crisis, such as the impact on NATO-Russia relations, and foreign policy responses to the crisis from a variety of state and supranational actors including the EU and Russia. The role of sub-state and non-state actors, and implications for them, has been largely overlooked. This volume seeks to rectify this by examining a wide array of non-state and sub-state actors that have both played a role in the conflict in Ukraine and been indirectly impacted by it.

Order and Conflict in Public Space Edward Elgar Publishing

Since the 1980s, transitional justice mechanisms have been increasingly applied to account for mass atrocities and grave human rights violations throughout the world. Over time, post-conflict justice practices have expanded across continents and state borders and have fueled the creation of new ideas that go beyond traditional notions of amnesty, retribution, and reconciliation. Gathering work from contributors in international law, political science, sociology, and history, *New Critical Spaces in Transitional Justice* addresses issues of space and time in transitional justice studies. It explains new trends in responses to post-conflict and post-authoritarian nations and offers original empirical research to help define the field for the future.

Human Development Report 2014 Routledge

This book seeks to bring together different philosophical, theoretical, and methodological approaches to the study of human mobility within the discipline of geography. With five thematic sections – conceptualizing and analyzing mobility, inequalities of mobility, politics of mobility, decentering mobility, and qualifying abstraction – and 27 substantive chapters by leading researchers in the field, it provides a comprehensive overview of the latest thinking about human mobility and related issues. The contributors discuss mobility issues as diverse as everyday mobilities of young people, migrants and refugees, and sex workers; the relationships between citizenship and mobility; and the potential and pitfalls of big data for understanding mobility. This, coupled with a broad international focus, means that *Geographies of Mobility* will not only encourage and enrich dialogue on a theme that is of major importance to varied geographic research communities, but will also be of great interest to students and researchers across the wider social sciences. This book was originally published as a special issue of *Annals of the American Association of Geographers*.
