Much of the anticipated future growth in the United States will take place in suburbia. The critical challenge is how to accommodate this growth in a sustainable and resilient manner. This book explores the role of suburban tall as a viable, sustainable alternative to continued

suburban sprawl. It identifies 10 spatial patterns in which tall buildings have been integrated into the American suburbs. The study concludes that the Tall Building and Transit-Oriented-Development (TB-TOD) model is the most appropriate to promote sustainable suburbanism. The findings are based on analyzing over 300 projects in 24 suburban communities within three major metropolitan areas including: Washington, DC, Miami, Florida, and Chicago, Illinois. The book furnishes planning strategies that address the social, economic, and environmental aspects of sustainable tall building development. It also discusses sustainable architectural design and site planning strategies and provides case studies

of sustainable tall buildings that were successfully integrated into suburban settings.

This is the first title in a new series of volumes examining different dimensions of the media and culture in small nations.

Whether at a local, national or international level, radio has played and continues to play a key role in nurturing or denying – even destroying – people’s sense of ‘belonging’ to a particular community, whether it be defined in terms of place, ethnicity, language or patterns of

consumption. Typically, the radio has been used for purposes of propaganda and as a means of forging national identity both at home and also further afield in the case of colonial exploits. Drawing on examples of four models of, the chapters in this volume will provide an historical and contemporary overview of radio in a number of small nations. The authors propose a stimulating discussion on the role radio has played in a variety of nation contexts worldwide.

Urban regions have come under increasing pressure to adapt to the imperatives of mobility, including greater freedom of travel, rising trade volumes and global economic networks.

Whereas urbanization was once characterized by the concentration of services and facilities, urban areas now have to ensure the exchange of goods, services and information in a much more complex, interrelated, highly competitive, and spatially dispersed environment. As a consequence, cities are challenged to ensure the functionality of infrastructure while mitigating negative environmental and social impacts. *Cities, Regions and Flows* brings together debates in a single volume to present a theoretical framework for understanding the changing relationship between places and movement. It analyses the significance of flows of goods for urban and regional development and emphasises the twin processes of integration and disintegration that result from goods movement within urban space. It discusses urban regions as nodes for organizing the exchange of goods, services and information against a background of socio-economic and technological change, as well as new patterns of urbanization. The new logistics concepts and practices that have been developed in response to these changes exert both integrative and disintegrative effects on cities and regions. It also considers how urban policies are dealing with related challenges concerning infrastructure provision, land use, local labour markets and environmental sustainability. *Cities, Regions and Flows* contains thoughtfully

prepared case studies from five different continents on how cities manage to become part of value chains and how they strive for accessibility in an increasingly competitive environment. This book will be of interest to policy-makers and advanced classes in planning, geography, urban studies and transportation.

The Handbook provides a comprehensive statement and reference point for hazard and disaster research, policy making, and practice in an international and multi-disciplinary context. It offers critical reviews and appraisals of current state of the art and future development of conceptual, theoretical and practical approaches as well as empirical knowledge and available tools. Organized into five inter-related sections, this Handbook contains sixty-five contributions from leading scholars. Section one situates hazards and disasters in their broad political, cultural, economic, and environmental context. Section two contains treatments of potentially damaging natural events/phenomena organized by major earth system. Section three critically reviews progress in responding to disasters including warning, relief and recovery. Section four addresses mitigation of potential loss and prevention of disasters under two sub-headings: governance, advocacy and self-help, and communication

and participation. Section five ends with a concluding chapter by the editors. The engaging international contributions reflect upon the politics and policy of how we think about and practice applied hazard research and disaster risk reduction. This Handbook provides a wealth of interdisciplinary information and will appeal to students and practitioners interested in Geography, Environment Studies and Development Studies.

21st Century Geography: A Reference Handbook BWV Verlag

This book examines the online memory wars in post-Soviet states – where political conflicts take the shape of heated debates about the recent past, and especially World War II and Soviet socialism. To this day, former socialist states face the challenge of constructing national identities, producing national memories, and relating to the Soviet legacy. Their pasts are principally intertwined: changing readings of history in one country generate fierce reactions in others. In this transnational memory war, digital media form a pivotal discursive space – one that provides

speakers with radically new commemorative tools. Uniting contributions by leading scholars in the field, *Memory, Conflict and New Media* is the first book-length publication to analyse how new media serve as a site of political and national identity building in post-socialist states. The book also examines how the construction of online identity is irreversibly affected by thinking about the past in this geopolitical domain. By highlighting post-socialist memory's digital mediations and digital memory's transcultural scope, the volume succeeds in a twofold aim: to deepen and refine both (post-socialist) memory theory and digital-memory studies. This book will be of much interest to students of media studies, post-Soviet studies, Eastern European Politics, memory studies and International Relations in general.

Focusing on a range of Eurasian conflicts, including Nagorno-Karabakh, South Ossetia and Abkhazia, this book offers contemporary perspectives on the ongoing conflicts in the Eurasia, with an emphasis on the attempts towards peace. The book brings into focus how various factors such as ethnicity, religion, border disputes, resources, and animosities inherited from the past play crucial role in these conflicts. It questions whether developments in Eurasia affect other conflicts across the globe, and if differences between parties can be resolved without pulling the relations beyond adjustable limits. The book goes on to look at how tricky the path to peace would be, and furthers the development of a framework of study of Eurasian conflicts in the post-Soviet world, while taking into account both internal and external variables in analyzing these conflicts. It is a useful contribution to Central Asian and Caucasian Politics and Security Studies.

This textbook focuses on the cohort change ratio (CCR) method. It presents powerful, yet relatively simple ways to generate accurate demographic estimates and forecasts that are cost

efficient and require fewer resources than other techniques. The concepts, analytical frameworks, and methodological tools presented do not require extensive knowledge of demographics, mathematics, or statistics. The demographic focus is on the characteristics of populations, especially age and sex composition, but these methods are applicable estimating and forecasting other characteristics and total population. The book contains more traditional applications such as the Hamilton-Perry method, but also includes new applications of the CCR method such as stable population theory. Real world empirical examples are provided for every application; along with excel files containing data and program code, which are accessible online. Topics covered include basic demographic measures, sources of demographic information, forecasting and estimating (both current and historical) populations, modifications to current methods, forecasting school enrollment and other characteristics, estimating life

expectancy, stable population theory, decomposition of the CCR into its migration and mortality components, and the utility of the CCR. This textbook is designed to provide material for an advanced undergraduate or graduate course on demographic methods. It can also be used as a supplement for other courses including applied demography, business and economic forecasting and market research.

Interactive Dynamics, Synergy and Symbiotic Growth Routledge

The global economy is currently going through a period of transformation that has seen Asia emerge as the most rapidly growing, industrializing and modernizing region in the world economy. Whilst the rest of the world struggled during the financial crisis of 2007-9, Asia played the role of a linchpin for global economic recovery. This book analyzes the growth of key Asian economies in the latter half of the twentieth century, followed a little later by China. Notwithstanding the diversity in the region, rapid growth was instrumental in integrating the Asian economies initially in a market-led manner. Dilip K. Das focuses on the interactive dynamics and the process of integration in the region, exploring the synergy created as well as the resulting symbiotic growth among the Asian economies and

China. Written in a clear, comprehensive and critical manner by a world class expert in the field, this book brings together the contemporary academic and policy debates on the issues under examination. As such it is an essential read for students and scholars of economics, international political economy and Asian Studies as well as MBA students.

New part cases help to highlight the core themes and apply them to real business scenarios.

There have been famous chefs for centuries. But it was not until the second half of the twentieth century that the modern celebrity chef business really began to flourish, thanks largely to advances in media such as television which allowed ever-greater numbers of people to tune in. Food Media charts the

growth of this enormous entertainment industry, and also how, under the threat of the obesity "epidemic," some of its stars have taken on new authority as social activists, while others continue to provide delicious distractions from a world of potentially unsafe food. The narrative that joins these chapters moves from private to public consumption, and from celebrating food fantasies to fueling anxieties about food realities, with the questionable role of interference in people's everyday food choices gaining ground along the way. Covering celebrity chefs such as Jamie Oliver and Rachael Ray, and popular trends like foodies, food porn and fetishism, Food Media describes how the intersections between celebrity culture and food media have come to influence how many people think about feeding themselves and their families - and how often that task is complicated when it need not be.

Special interest tourism is growing rapidly due to a discerning and heterogeneous travel market and the demand for more focused activity or interest-based tourism

experiences. This book approaches the topic from the perspective of both supply and demand, and addresses the complexities now inherent in this area of tourism. It presents a contextualised overview of contemporary academic research, concepts, principles and industry-based practice insights, and also considers the future of special interest tourism in light of the emergence of ethical consumerism. Sometimes referred to as niche or contemporary tourism, this book provides a complete introduction to the study of special interest tourism for students.

Islam and identity politics among British-Bangladeshis McGraw Hill

Why Europe Intervenes in Africa analyses the underlying causes of all European decisions for and against military interventions in conflicts in African states since the late 1980s. It focuses on the main European actors who have deployed troops in Africa: France, the United Kingdom and the European Union. When conflict occurs in Africa, the response of European actors is generally inaction. This can be explained in several ways: the absence of strategic and economic interests, the

unwillingness of European leaders to become involved in conflicts in former colonies of other European states, and sometimes the Eurocentric assumption that conflict in Africa is a normal event which does not require intervention. When European actors do decide to intervene, it is primarily for motives of security and prestige, and not primarily for economic or humanitarian reasons. The weight of past relations with Africa can also be a driver for European military intervention, but the impact of that past is changing. This book offers a theory of European intervention based mainly on realist and post-colonial approaches. It refutes the assumptions of liberals and constructivists who posit that states and organisations intervene primarily in order to respect the principle of the 'responsibility to protect'.

Enlargement has been an almost constant part of European integration history – going from an improvised exercise to the EU's most developed foreign policy tool. However, neither the longevity nor the complexity of enlargement has been properly historicised. European Enlargement across Rounds and Beyond Borders offers three interdisciplinary, innovative, and indeed radical, new ways of understanding and analysing EC/EU enlargements: first, tracing Longue Durée developments; second, investigating

enlargement Beyond the Road to Membership; and third, exploring the Entangled Exchanges and synergies between the EC/EU and its outside. This edited volume will provide fresh perspectives on enlargement as one of the defining processes in Europe in the second half of the 20th century: How are we to understand enlargement as a policy? How has it changed the EU? What is the historical role of the British press in shaping the UK's visions of Europe? How has enlargement played into Russia's relationship with today's EU? Giving answers to these questions, and many more, this volume wishes to spark a broad debate about the roots, range, and repercussions of enlargement, and how historians, and other scholars, should engage with it. This publication will be of key interest to scholars and students of modern European history and politics, the European integration process, EU studies, and more broadly multilateral international institutions, history, law and the social sciences.

As well as marking the tenth anniversary of the collapse of Lehman Brothers and the consequent unleashing of the global financial crisis, 2018 is also the year of negotiations on the terms of the UK's exit from the European Union. Within a decade the banking world has witnessed two epochal events with potential to redraw the map of international financial centres: but how much has this map actually changed since 2008, and how is it likely to change in the near future? *International Financial Centres after the Global Financial Crisis and Brexit* gathers together leading economic historians, geographers, and other social scientists to focus on the post-2008 developments in key international financial centres. It focuses on the shifting hierarchies of New York, London, Paris, Geneva, Zurich, Frankfurt, Singapore, Hong Kong, Beijing, Shanghai, and Tokyo to

question whether Asian financial centres have taken advantage of the crisis in the West. It also examines the medium-effects of the crisis, the level of regulation, and the rise of new technology (fintech). By exploring these crucial changes, it questions whether shifts in the financial industry and the global landscape will render these centres unnecessary for the functioning of the global economy, and which cities are likely to emerge as hubs of new financial technology.

Transformation to a low carbon economy is a central tenet to any discussion on the solutions to the complex challenges of climate change and energy security. Despite advances in policy, carbon management and continuing development of clean technology, fundamental business transformation has not occurred because of multiple political, economic, social and organisational issues. *Carbon Governance, Climate Change and Business Transformation* is based on leading academic and industry input, and three international workshops focused on low carbon transformation in leading climate policy jurisdictions (Canada, USA and the UK)

under the international Carbon Governance Project (CGP) banner. The book pulls insights from this innovative collaborative network to identify the policy combinations needed to create transformative change. It explores fundamental questions about how governments and the private sector conceptualize the problem of climate change, the conditions under which business transformation can genuinely take place and key policy and business innovations needed. Broadly, the book is based on emerging theories of multi-levelled, multi-actor carbon governance, and applies these ideas to the real world implications for tackling climate change through business transformation. Conceptually and empirically, this book stimulates both academic discussion and practical business models for low carbon transformation.
