[What is Darwinism?](#) Harvest House Publishers

"Foreword: William Dembski, PhD." Darwinism is a 150-year-old icon that has been propped up by unproven suppositions. The scientific discoveries of the last few decades are now kicking out the props. Dr. Kenneth Poppe is convinced the icon is ready to topple. Providing extensive scientific evidence of Darwinism's failures, this career biology instructor uses enlightening analogies and examples to explain the theory's problems: blind-luck assembly of the first cell mathematical "im"probabilities the laws of thermodynamics hypothetical sudden mutations biased mind-sets Spiced with humor and helpful graphics, this popularly targeted text shows readers that--in regard to objections to evolution--"the science is truly there." "A superior resource for students, parents, and private- or public-school educators."

Encyclopedia of the Anthropocene presents a currency-based, global synthesis cataloguing the impact of humanity 's global ecological footprint. Covering a multitude of aspects related to Climate Change, Biodiversity, Contaminants, Geological, Energy and Ethics, leading scientists provide foundational essays that enable researchers to define and scrutinize information, ideas, relationships, meanings and ideas within the Anthropocene concept. Questions widely debated among scientists, humanists, conservationists, politicians and others are included, providing discussion on when the Anthropocene began, what to call it, whether it should be considered an official geological epoch, whether it can be contained in time, and how it will affect future generations. Although the idea that humanity has driven the planet into a new geological epoch has been around since the dawn of the 20th century, the term ' Anthropocene ' was only first used by ecologist Eugene Stoermer in the 1980s, and hence popularized in its current meaning by atmospheric chemist Paul Crutzen in 2000. Presents comprehensive and systematic coverage of topics related to the Anthropocene, with a focus on the Geosciences and Environmental science Includes point-counterpoint articles debating key aspects of the Anthropocene, giving users an even-handed navigation of this complex area Provides historic, seminal papers and essays from leading scientists and philosophers who demonstrate changes in the Anthropocene concept over time

[Reclaiming Science from Darwinism](#) Savvas Learning Company

Humanity is failing at solving complex socio-ecological problems like global climate change, biodiversity loss and population growth. The existing 'sustainable development' paradigm and its reliance on trade-offs between the three pillars of environment, economics, and equity is not robust enough to maintain global carrying capacity. In this timely intervention, Thomas argues that the holistic and transdisciplinary thinking of four iconic American naturalists - Henry David Thoreau, Aldo Leopold, Rachel Carson, and Edward O. Wilson - can instead help to solve our biggest twenty-first century challenges by synthesizing values from four eras of cultural and environmental history.

This report is a socioeconomic and political analysis of environmental sustainability in terms of the present state of the environment, what we can do to reverse the negative trends, and what the current and potential barriers are. First, it offers a background of the issue through a historical perspective. How we got here has a lot to do with how previous generations behaved towards the environment. Similarly, how we behave will determine the kind of environment future generations will have to contend with. It looks at the dynamics likely to impact the balance of nature. Also, because understanding what is biodiversity and why is it important are essential in order to grasp the concept of sustainability, this report looks at the types of ecosystems that form the biosphere and brings an answer to this important question, "Is the Maximum sustainable yield (MSY) concept a fallacy?" Moreover, the importance of cities is a key factor in environmental sustainability. So, the report shows the pros and cons of cities in both the preservation of the environment and the conservation of its biodiversity. The social, economic, and political analyses use the latest data and views from experts, scientists, and scholars alike and also the views of the common people. The result is that all three levels have positives and negatives and so, none of them should be individually prioritized over the other two. To tackle this dilemma, the report offers an alternative: an inclusive, pluralistic, and global approach which aims at motivating all stakeholders – from rich and poor countries – and people from all walks of life to work together towards a common goal and common interests. Such an approach, says the report should be bottom-up instead of top-down, that is, the needs of local populations, especially those closer to biodiversity, must come first before those of large corporations. However, while in the present and short terms, this approach may be successful, in the long term or a distant future, there are reasons to be skeptical for the environment is constantly changing and generations are different from one another. And that is very important because what constitutes the cornerstone of environmental sustainability is this: the present use of natural resources should not be harmful to future generations. Therefore, the report looks into the future. While acknowledging that, in terms of environmental sustainability, predicting the future is a daunting task – because it is better to think that the future is now – the report shows how we can prepare a soft landing for our great grand-children by laying the groundwork for them. We can accomplish this last task because we still have time.

Does a time gap exist between the first two verses of Genesis? In this book you will learn about a controversial, lesser known literal interpretation of the Genesis narrative that does not contradict the scientific evidence for an Old Earth. Commonly called the "Gap Theory" or Ruin-Reconstruction interpretation, it is a theological interpretation much older than Darwin's Theory of Evolution. It is based on the Scriptural fact that in the second verse of Genesis, the Holy Bible simply and clearly states that the planet Earth was already here (but in a ruined state) before the creative process of the seven days even begins. The Bible itself provides insight into a great mystery in Earth's natural history at what is known as the Pleistocene - Holocene boundary. Science remains at a loss to definitively explain the Ice Age and the anomaly of the mysterious mega fauna extinctions across the face of the Earth about 12,000 to 10,000 Radio Carbon years ago. Geologic evidence from that period indicates extraordinary global massive volcanism, gigantic tidal waves, seismic activity on a vast scale, and extreme temperature swings on the Earth over a geologically brief period of time. It is no coincidence that the Bible at Genesis 1:2 describes the Earth as flooded, desolate, and in darkness in the time frame closely corresponding to these catastrophic events in the Earth's natural history. Clearly, these two mysteries are linked. The Earth has an ancient natural history that can be deciphered from the geologic record, but it also has an equally important ancient spiritual history that can only be deciphered from Rightly-Dividing the Holy Bible. Knowledge of both is required to correctly reconcile Geology and the Book of Genesis.

DISCIPLE is a program of disciplined Bible study aimed at developing strong Christian leaders. The study gives the Old and New Testaments equal time, emphasizing the wholeness of the Bible as a revelation of God. DISCIPLE draws upon the work of scholars, the personal Bible reading and study of the participant, and dynamic group discussion to aid understanding of the Bible. The first study in the program is DISCIPLE: BECOMING DISCIPLES THROUGH BIBLE STUDY, a thirty-four week overview of the entire Bible. Commitment and Time Involved Three and one-half to four hours of independent study each week (40 minutes daily for leaders and 30 minutes daily for group members) in preparation for weekly group meetings. Attendance at weekly 2.5 hour meetings. Study Manual Each member of the group needs a study manual and a Bible. The Bible is the text for the study and the study manual will guide group members in their study and preparation for the weekly group session. The study manual also includes suggestions for individual and study-related activities. Space is provided for taking notes while reading Scripture, for recording thoughts and questions arising out of daily study, and for notes during the weekly group session. The titles of the sessions along with theme words and theme verses, and major persons, events, and topics will set the sequence of the biblical story in the minds of the participants. The principal Scripture for each session follows the chronological movement of the biblical story. We recommend the New Interpreters Study Bible More Questions? Visit www.cokesbury.com/disciple.

The Age of the Earth transcript Verlag

Warren Johnson’s important book takes readers on a journey into the medieval way of life when the edict of “Do unto others as you would yourself” was the rallying cry that helped people work together for a common good. So where did it all go so wrong? What happened to caring for our fellow human? Our land? Our resources? Warren argues that much was lost with the Age of Enlightenment. While the age gave us reason and science, it distanced us from the sacred, leaving us with little more than an insatiable appetite for the new, the bigger, the faster, the shinier, and the shallower. For Everything a Season reignites the sacred flame. Warren urges us to recommit to faith, while maintaining our reason. Guided by traditional principles embedded in the great teachings of the New and Old Testaments, he offers a hopeful path to creating a modern eco-system where every individual consumes and creates in balance with the sacred whole. In this way, we do away with excess, make reparations for our past, and ultimately lead a happier, healthier life. There is more meaning to the simple life than has been understood. This book offers the map to true eternal treasure.

Sense of Social Science in an Age of Conflict, Opposition, and Grace

This is a question which needs an answer. Great confusion and diversity of opinion prevail as to the real views of the man whose writings have agitated the whole

world, scientific and religious. If a man says he is a Darwinian, many understand him to avow himself virtually an atheist; while another understands him as saying

that he adopts some harmless form of the doctrine of evolution. This is a great evil. It is obviously useless to discuss any theory until we are agreed as to what that

theory is. The question, therefore, What is Darwinism? must take precedence of all discussion of its merits. The great fact of experience is that the universe exists.

The great problem which has ever pressed upon the human mind is to account for its existence. What was its origin? To what causes are the changes we witness

around us to be referred? As we are a part of the universe, these questions concern ourselves. What are the origin, nature, and destiny of man? Professor Huxley is

right in saying, "The question of questions for mankind—the problem which underlies all others, and is more interesting than any other—is the ascertainment of the

place which Man occupies in nature and of his relation to the universe of things. Whence our race has come, what are the limits of our power over nature, and of

nature's power over us, to what goal are we tending, are the problems which present themselves anew and with undiminished interest to every man born into the

world." [1] Mr. Darwin undertakes to answer these questions. He proposes a solution of the problem which thus deeply concerns every living man. Darwinism is,

therefore, a theory of the universe, at least so far as the living organisms on this earth are concerned. This being the case, it may be well to state, in few words, the

other prevalent theories on this great subject, that the points of agreement and of difference between them and the views of Mr. Darwin may be the more clearly

seen.

Perhaps just as perplexing as the biggest issues at the core of Earth science is the nature of communicating about nature itself. New Trends in Earth-Science

Outreach and Engagement: The Nature of Communication examines the processes of communication necessary in bridging the chasm between climate change and

natural hazard knowledge and public opinion and policy. At this junction of science and society, 17 chapters take a proactive and prescriptive approach to

communicating with the public, the media, and policy makers about the importance of Earth science in everyday life. Book chapters come from some 40 authors

who are geophysical scientists, social scientists, educators, scholars, and professionals in the field. Bringing diverse perspectives, these authors hail from

universities, and research institutes, government agencies, non-profit associations, and corporations. They represent multiple disciplines, including geosciences,

education, climate science education, environmental communication, and public policy. They come from across the United States and around the world. Arranged

into five sections, the book looks at geosciences communication in terms of: 1) Education 2) Risk management 3) Public discourse 4) Engaging the public 5) New

media From case studies and best practices to field work and innovations, experts deliver pragmatic solutions and delve into significant theories, including diffusion,

argumentation, and constructivism, to name a few. Intended for environmental professionals, researchers, and educators in the geophysical and social sciences, the

book emphasizes communication principles and practices within an up-to-the-minute context of new environmental issues, new technologies, and a new focus on

resiliency.
