The remarkable system of Vedic mathematics was created after careful study of ancient Sanskrit texts early last century. The Vedic system with its direct, easy and flexible approach forms a complete system of mental mathematics (though the methods can also be written down) and brings out the naturally coherent and unified structure of mathematics. Many of the features and techniques of this unique system are truly amazing in their efficiency and originality. Being a mental system, Vedic Mathematics encourages creativity and innovation. Mental mathematics increases mental agility, improves memory, the ability to hold ideas in the mind and promotes confidence, as well as being of great practical use. This course consists of three textbooks an Answer Book and a Teacher`s Guide. The course is aimed at 11-14 year old pupils though some

of it is very suitable for children from 8 years. Vedic Mathematics is being taught in many schools world-wide with great success: many top mathematics prizes have been won by students of this system.

A focus on what teachers can do, not on what special learners can't... This easy-to-understand book examines teacher-made tests and curricula as they relate to a child's success or failure. To break through the

inertia of common practice in the classroom, the authors integrate the basic concepts of evaluation and instructions with the best current knowledge to generate productive classroom tools. Using a step-by-step approach, the authors show you: how to use the curriculum to meet the child's needs, how to assess in an ongoing way, and how to recognize when instructional change is warranted.

Designed for junior- and senior-level courses in plant and facilities planning and manufacturing systems and procedures, this textbook also is suitable for graduate-level and two-year college courses. The book takes a practical, hands-on, project-oriented approach to exploring the techniques and procedures for developing an efficient facility layout. It also introduces state-of-the-art tools including computer simulation. Access to Layout-iQ workspace planning software is

included for purchasers of the book. Theoretical concepts are clearly explained and then rapidly applied to a practical setting through a detailed case study at the end of the volume. The book systematically leads students through the collection, analysis, and development of information to produce a quality functional plant layout for a lean manufacturing environment. All aspects of facility design, from receiving to shipping, are covered. In the sixth edition of this successful book, numerous updates have been made, and a chapter on engineering cost estimating and analysis has been added. Also, rather than including brief case-in-point examples at the end of each chapter, a single, detailed case study is provided that better exposes students to the multiple considerations that need to be taken into account when improving efficiency in a real manufacturing facility. The textbook has enjoyed substantial international adoptions and has been translated into Spanish and Chinese.

Many people were

curious about how I created so many unique workbooks. People were also wondered how Ho Math Chess is different from other similar learning centres. Many readers do not have an idea on how these puzzles were placed in each of our workbooks. When we first created these puzzles, we did not have a blueprint to follow because they did not exist. Many parents do not know how to teach their children with our workbooks because they themselves had never seen this kind of arithmetic worksheets before. So, I decided to write a book to address the above two problems, one is to describe how I created worksheets in general, and the other is to show how and why Ho Math Chess sets itself apart from others. I would like to thank my students who had given us feedbacks during my writing many workbooks. As a matter of fact I wrote a few worksheets for some of my students and tried on them and if they did not work out effectively, then I revised. Without these students' input, some of my workbooks would not have been materialized. I have produced unedited videos to talk about my worksheets and explained about their formatting. Watch my videos using the following links. They are very educational and one-of-a-kind. Frank Ho presents math, chess, and puzzles integrated Intelligent Arithmetic Worksheet. <https://www.youtube.com/watch?v=Td3SKp7cukA&t=262s> Published on Jun 14, 2017 Frank walks the viewer through his unique and world's first math, chess, and puzzles integrated worksheet. No questions are shown on the sheet, only mini-chessboard, puzzle table, and his invented flat chess Geometry Chess Symbols which are being used as a set of the command language. Students follow identified square where and use chess moves to reach a puzzle table (information retrieval like cloud storage) to fetch its corresponding data. The fetched data is linked with the previously identified mini-chessboard to complete the answer. The whole process takes the boredom and mundane routine computation procedure out of the problem and replaces it with puzzle-like fun. Ho Math Chess Intelligent Arithmetic Worksheets This is the future style of computation problems that is students not only will be trained on computation to find answers they also are asked to use their thinking skills to figure out the problems by going through visualization, orientation, corresponding, analyzing, synthesizing, and executing abstract commanding symbols. The enforcement for the students to write the problems only imprints more impression on the number facts. <https://www.youtube.com/watch?v=D3wAMqo4qUE> What is Intelligent Arithmetic Worksheet? The intelligent Arithmetic worksheet allows students to work on computations but figures out the answers like they are working on word problems. I have dreamed about how can I can create a type of computation worksheets which are disruptively different from the traditionally straightforward type of computational worksheets? Not only they have to be fun, intriguing and entertaining they also must be effective in learning results. This example is one of many

examples which I created and collected them in my workbook called Ultimate Math Contest Preparation, Problem Solving Strategies, and Math IQ Puzzles Grade 1 and 2 from pages 28 to 74. The Intelligent Arithmetic Worksheets take the exploratory approach which trains a student to use more of his or her brain and, yet the problem is not difficult, so an average student can solve them with fun. I also created a video which introduces my math, chess, and puzzles combined idea as follows: <https://www.youtube.com/watch?v=Td3SKp7cukA>

Survey of Science
History & Concepts
Course Description
Students will study four areas of science: Scientific Mathematics, Physics, Biology, and Chemistry. Students will gain an appreciation for how each subject has affected our lives, and for the people God revealed wisdom to as they sought to understand Creation. Each content area is

thoroughly explored, giving students a good foundation in each discipline. Semester 1: Math and Physics Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics. Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as

he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia first hand during fun and informative experiments. Exploring the World of Physics is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives. Semester 2: Biology and Chemistry The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will

read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life-from the smallest proteins and spores, to the complex life systems of humans and animals. Chemistry is an amazing branch of science that affects us every day, yet few people realize it, or even give it much thought. Without chemistry, there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries, and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. Exploring the World of Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information.
