The study indicates that analysis of morphometric parameters with the help of geographic information system (GIS) would prove a viable method of characterizing the hydrological response behaviour of the watershed. It is also well observed that remote sensing satellite data is emerging as the most effective, time saving and accurate technique for morphometric analysis of a basin.

Although the study of  
geomorphology has been  
around since ancient times,  
the first official  
geomorphologic model was  
proposed between 1884 and  
1899 by the American  
geographer William Morris  
Davis. His geomorphic cycle  
model was inspired by  
theories of uniformitarianism  
and attempted to theorize the  
development of various  
landform features.
